# GERANIUMS

## OUR SPECIALTY!

WE are prepared to grow Geraniums on quite an extensive scale next season, and are making very interesting prices on orders booked now for delivery during the Fall and Winter. Send us a list of what you can use and when you will be ready for them and see what we can do for you. Only plants from 2-in. pots. We do not send out rooted cuttings.

**WE HAVE A SPLENDID LOT READY FOR IMMEDIATE SHIPMENT FROM 2-IN. POTS, IN FINE SHAPE.**

Standard Sorts at \$2.00 per 100 and up. We will send 1000, fifty each of twenty varieties, our selection, for \$18.50, single or double, all good sorts, a splendid collection to stock up on.

Newer Varieties selected from the finest introductions of 1905-6 at \$6.00 to \$8.00 per 100.

Novelties, one each of 50 varieties for \$5.00, from 1907 introduction from Bruants, Lemoine, Rozain, Bouchardat, Callells and other specialists.

SMILAX, strong plants, \$2.00 per 100.

COLEUS, Golden Bedder and Verschaffeltii, 2 in., \$2.00 per 100.

3 in., 3.00 per 100.

BEGONIA, Vernon and Gracilis, 2 in., \$2.00 per 100.

HARDY CHRYSANTHEMUMS, \$2.00 per 100. 500 in 20 varieties, our selection for \$9.00. 1000 in 20 varieties our selection for \$17.50, strong plants from 2 in. pots.

**R. VINCENT JR. & SONS COMPANY, White Marsh, Md.**

## COLD STORAGE

### LILIUM SPECIOSUMS AND AURATUMS, &c

potted in July will flower for Christmas; this is not a seedsman's theory but practiced by leading plant growers in the United States and Canada, also Europe.

Our stock of Coldstorage lilies are not surplus or left over bulbs, but bulbs put into cold storage on arrival, packed especially for this purpose. We offer them till sold as follows:—

#### LILIUM SPECIOSUM RUBRUM—Cold Storage.

8-9 inch bulbs, 225 in a case, \$6.50 per 100; \$60.00 per 1000

9-11 inch bulbs, 125 in a case, \$10.00 per 100; \$90.00 per 1000

#### LILIUM SPECIOSUM ALBUM—Cold Storage.

8-9 inch bulbs, 225 in a case, \$9.00 per 100; \$80.00 per 1000

9-11 inch bulbs, 125 in a case, \$14.50 per 100; \$140.00 per 1000

#### LILIUM SPECIOSUM MELPOMENE—Cold Storage.

8-9 inch bulbs, 225 in a case, \$7.50 per 100; \$70.00 per 1000

9-11 inch bulbs, 125 in a case, \$11.00 per 100; \$100.00 per 1000

#### LILIUM AURATUM—Cold Storage.

9-11 inch bulbs, 125 in a case, \$9.00 per 100; \$85.00 per 1000

#### LILIUM LONGIFLORUM GIGANTEUM—Cold Storage.

7-8 inch bulbs, 300 in a case, \$8.00 per 100; \$70.00 per 1000; \$21.00 per case

7-9 inch bulbs, 300 in a case, \$9.00 per 100; \$85.00 per 1000; \$25.00 per case

9-10 inch bulbs, 200 in a case, \$14.00 per 100; \$130.00 per 1000; \$25.00 per case

All Cases Repacked and Bulbs guaranteed sound

## Notes from the Arnold Arboretum

Midsummer marks the turning point in regard to the ornamental features of our shrubberies; the number of flowering trees and shrubs and particularly of those with very showy flowers is decreasing considerably, while the ornamental fruits begin to make their appearance to compensate for the diminished number of flowers. There are, however, still a few trees and shrubs of great beauty in bloom at this time and among them the showiest are the Catalpas, which are hardly surpassed by any other trees when covered with their great panicles of large white flowers. The hardier *Catalpa speciosa* with larger flowers in somewhat smaller panicles is already out of bloom; while *C. bignonioides* which flowers about two weeks later is scarcely opening its first flowers; the Japanese *C. ovata* (*C. Kaempferi*) now in full bloom with its small yellow flowers is far less beautiful than the two American species. The rare *C. Bungei* from northern China, not to be confounded with *C. bignonioides* var. *nana*, often cultivated under the name of *C. Bungei*, has not yet flowered here. For a long time it was lost to cultivation, until a few years ago Professor Sargent succeeded in introducing it again directly from Peking. Its flowers are similar to those of *C. bignonioides* but are disposed in few-flowered corymbs, the leaves are smaller, of a brighter green and usually furnished with a few large teeth.

The Chestnut, *Castanea dentata*, though less showy is now very attractive covered with its slender spikes of creamy white flowers. Of similar appearance but low and shrubby is the Chincapin, *C. pumila*, which has proved perfectly hardy at the Arboretum, though it is a southern species.

*Robinia Holdtii*, a hybrid of *R. neo-mexicana* and *R. Pseudacacia*, is now showing a second time its racemes of pink flowers: it is a handsome small tree and well worth a place in the shrubberies.

*Rose lucida* and *R. humilis* are now brightening up the borders of the shrubberies with their pink sweet-scented flowers; they are not only handsome in flower, but also attractive in winter with their bright red hips and purple stems; there is also a pretty variety with large white flowers which has green stems.

The summer-blooming Spiraeas are now coming into flower; they belong to the section *Calospira* and *Spiraria* and their flowers range in shades from light pink to purple, rarely white. Those of the first section are characterized by flat flower clusters borne at the ends of the stems; the best known of them are *Spiraea japonica* and *S. Bumalda* and a very popular variety of the latter is *Anthony Waterer* with deep crimson-purple flowers. Of the allied genus *Sorbaria* the well known *S. sorbifolia* is now in bloom; with its large panicles of white flowers and bright green pinnate leaves it is very attractive, but otherwise it is of rather stiff habit and spreads much by suckers; it is one of the first shrubs to burst into leaf in spring. Much more graceful is *Holodiscus discolor* which forms a broad shrub with arching branches bearing large panicles of creamy white flowers; it is very well suited for planting as a single specimen on the lawn or on projecting parts of the shrubbery where it is not crammed in by other shrubs.

With their light and feathery appearance the slender branches topped by large and loose panicles of pink flowers the Tamarix are unique among the shrubs now in bloom; *Tamarix Odessana* and *T. Pallasii* have pale pink flowers, while *T. hispida* (*T. kashgarica*) and its variety *aestivalis* have flowers of a deeper pink. They

are all excellent shrubs for single planting and will even grow well in the very spray of the saltwater.

The Smoketree, *Cotinus Coccinea* (*Rhus Cotinus*), is beginning to look beautiful covered with its feathery panicles resting like a cloud of purplish smoke on the shrub; it varies in the color of its fruiting panicles from greenish to purple and a particularly deep purple form is distinguished as var. *atropurpurea*. The American Smoketree, *Cotinus americana*, is far less showy in fruit, but equally beautiful or perhaps more so in its autumnal coloring.

The Mountain Elder, *Sambucus racemosa*, is very handsome with its great clusters of coral-red berries disposed along the branches; it is otherwise a somewhat coarse shrub and is not long-lived which is probably the reason that it is not planted so much as it deserves for its ornamental fruits; as a mountain plant it delights in cool and partly shaded situations.

With its brownish-red berries hanging on slender stalks from the spreading branches *Elaeagnus longipes* is now exceedingly handsome; the fruits which are of an agreeable sub-acid flavor may be used for jellies.

Besides those mentioned in an earlier issue many more Honeysuckles are now beginning to ripen their fruits as *Lonicera tatarica*, *L. Morrowii*, *L. Ruprechtiana* and the numerous hybrid forms between these species. Among the others one of the most beautiful is the recently introduced *L. Altmannii* with bright orange red pendulous berries which are much more handsomer than the rather insignificant white flowers; it is nearly related to *L. hispida* which has also bright red berries, but less showy, as they are partly enveloped by whitish bracts. Another Honeysuckle more beautiful in point than in flower is *L. involucrata* as well as *L. Ledebourii*, both with pendent purplish black, glossy berries surrounded by large purple bracts.

*Alfred Rehder*

Arnold Arboretum, Jamaica Plain, Mass.

## Schizanthus

The Schizanthus when well grown, is one of the most desirable annuals for greenhouse culture. As a conservatory plant it is unequalled, lasting in bloom for months; as a cut flower for dinner table, or other decoration it is one of the daintiest things that can be used. The past season we have used it frequently, for a most critical family, and it never failed to bring forth admiration. It is of very easy culture, but will not stand cooling in any shape or form. The young plants should never be allowed to become stunted, or pot bound, but should always be kept on the move. A cool treatment is what it delights in.

The finest variety that I have had the privilege of growing yet is the one figured on your frontispiece. This shows merely a single spray and was taken to show the individual flowers and not the habit of the plant. This is indeed a splendid variety, and the producer, A. T. Boddington, deserves great credit for it. The colors are most varied, the flowers large and well formed, and the habit is all that can be desired for a pot plant, being very compact and bushy.

*W. H. Waite*

Now comes the month of vacations, a  
 The season of relaxation  
 joyous one to those who have toiled  
 faithfully and unceasingly all through  
 the long year and have been adequately  
 recompensed and can now turn to rest and recreation  
 with the consciousness of duty well done. There are  
 others, no doubt, to whom the season of relaxation  
 brings scanty comfort; those who have worked perhaps

just as hard but have failed to realize from their labor  
 what they felt they had a right to expect; those who  
 have been made to feel the effect of the financial de-  
 pression of the past year—and there are many such—  
 whose vacations will fall far short of what they had  
 been looking forward to. For such the disappointment  
 will be alleviated by the prospects of the good year  
 which every one believes is coming and cheered by

"Hope of all ills that men endure,  
 The only cheap and universal cure."

An inspiring  
 outlook  
 The newspaper never gets a vacation,  
 be the times prosperous or otherwise.  
 With clock-work regularity each issue

must appear and it must be ever on  
 the alert with ceaseless vigilance to gather and record  
 the manifold happenings that interest the little world in  
 which and for which it lives. With the present issue  
 HORTICULTURE enters upon its eighth volume—the last  
 half of its fourth year. The eyes of thousands have  
 watched it grow and hosts of friends and well-wishers  
 have observed with unfeigned pleasure its healthy prog-  
 ress through infancy towards robust youth. The out-  
 look appears very rosy to HORTICULTURE. Now safely  
 beyond the critical period through which every period-  
 ical must pass and from which so small a proportion  
 ever emerge it can look forward with complacent confi-  
 dence to the larger responsibilities which are its mani-  
 fest destiny. The field for usefulness on the lines  
 chosen for HORTICULTURE is practically limitless and  
 the situation as it appears to us is full of inspiration.  
 All this has been made possible through the hearty en-  
 couragement and generous support of friends true as  
 steel. We have found the horticultural profession rich-  
 ly endowed with such men.

We note with much satisfaction  
 Where  
 intelligence and  
 ability gravitate  
 the unmistakable growth of late in  
 numbers and strength of the horti-  
 cultural organizations as evidenced  
 by the club and society news that

comes to hand from week to week. It is becoming  
 more and more evident that in horticulture, as well as  
 in every other line of civilized activity, in the clubs and  
 societies are to be found the men who represent the  
 highest type of intelligence, manliness and business  
 ability. The really strong men—those who are making  
 or are destined to make their mark on American horti-  
 cultural industry—are to be found on the membership  
 roll of one or many of the organizations working for  
 horticultural improvement. As intelligence advances  
 ignorance and prejudice must recede and the man of  
 broad-gauge character does not stop to ask that old ques-  
 tion, as selfish as it is foolish—"What good will it do  
 me to join?" for he realizes that the advantages of affil-  
 iation are mutual and that the individual confers upon  
 and receives from his fellows in such alliances benefits  
 in equal degree. Where you find a man who boasts that  
 he has nothing to do with and takes no interest in any  
 association within whose jurisdiction he follows his  
 vocation, be assured "there's a screw loose" somewhere.

## Obituary

### David Gindra.

This much beloved old-time gardener passed away at his home in Poughkeepsie, N. Y., on Friday, June 19, at the age of 75. He had been gardener on the Beck estate for 45 years and was recognized as a horticulturist of ability and high standing. He was a member of the Dutchess County Horti-

DAVID GINDRA.

icultural Society and had been for many years a member of the S. A. F. He is survived by his wife and two sons, both of whom are in the greenhouse business. The funeral was held from the home of his son, Conrad, on Monday morning, June 22, and was attended by a large representation of the horticultural profession. Numerous floral offerings testified to the esteem, love and respect in which Mr. Gindra was held by the community. Mr. Gindra and the late Thomas DeVoy were bosom friends for nearly fifty years. One of the local papers commenting on Mr. Gindra's death has this to say concerning him, every word of which we endorse:

"David Gindra lived his long life in harmony with all men. There are few who are endowed with the gentle, kindly spirit and sense of justness and fairness, which marked his character. Mr. Gindra was modest and unassuming in his ways. He made friends as time and occasion prompted, but never sought approval or looked for commendation. He did his duty faithfully and was true to every trust reposed in him."

### J. W. Minott.

J. W. Minott, for many years identified with the florist trade in Portland, Me., died suddenly at his home in Pleasantdale on June 23. Mr. Minott was born in the West Indies, although his parents were natives of Brunswick, Me. His age was 74. A widow and one son and daughter survive him.

### George T. Sambrook.

George T. Sambrook, an old and highly respected florist of Watervliet,

N. Y., died on June 20, aged 70 years. Mr. Sambrook was born in London, England, but came to this country when a boy, and has resided in Watervliet for fifty years, during thirty of which he has been engaged in the florist business. Mr. Sambrook served during the Civil War, and was badly wounded at the battle of the Wilderness. He leaves three sons and one daughter.

### H. Wilson Smith.

H. W. Smith of Mittineague, Mass., who for several years was engaged in the floral business, but was recently connected with the state experiment station in the gypsy moth department, died on June 21. A widow survives him.

### William H. Allen.

William H. Allen, who has been associated for nearly thirty years with the Hospital for the Insane, in Augusta, Me., as gardener and florist, died on June 25 at the age of 51. A widow and one son survive.

### Jacob A. Ryser.

Jacob A. Ryser, a native of Switzerland, and for several years a leading florist in Bellefontaine, O., died on June 19 at the age of 90.

### Mrs. George A. Williams.

The wife of George A. Williams of the Taunton Greenhouses, Taunton, Mass., died recently.

### Marcus Ellis.

Marcus Ellis, senior member of the Ellis Bros. Company, Keene, N. H., died on June 13. Ellis Brothers have been in the florist business many years in Keene, and deceased was well and favorably known, especially throughout the New England horticultural trade. He was born in Royalton, Vt.,

MARCUS ELLIS.

September 1, 1845. He removed to Keene when 19 years of age and went into the iron foundry business, in which he continued until 1880, when he gave it up to take charge of the greenhouses which he had established

six years before with his brother Albert, and which, after the withdrawal of his brother he continued under the same firm name. Four years ago, Mr. Ellis suffered a paralytic shock and at that time Frank Chapman was taken into partnership and the Ellis Bros. Co. was formed. Mr. Ellis was a successful business man, an exemplary citizen and was possessed of a remarkably serene disposition, which made for him a host of friends. He leaves a widow and four children.

THE LATE E. HIPARD.

## GARDENIAS FOR WINTER BLOOMING.

### Editor HORTICULTURE:

Will some of the readers of HORTICULTURE please give some information on the cultivation of Gardenias for winter blooming?

### SUBSCRIBER.

Replying to the above inquiry, almost anyone can grow gardenias. My experience is that the principal secret in getting them to flower during the winter is not to allow the plants to go to rest during the fall; that is, as soon as it becomes a little cool in the early fall the plants are very likely to be set with some buds, and they ought to be kept going right along, even if the flowers go to waste, as if you permit them to go to rest, let them be ever so plentifully supplied with buds, I have found it impossible to start them into growing again before the spring.

Keep them growing, if possible, with plenty of heat and moisture during the months of September, October, November, December and January, and you ought to get a good supply of flowers; of course, they will flower of their own accord during March and April, etc.

J. H. TROY.

# NEWS OF THE CLUBS AND SOCIETIES.

## NASSAU COUNTY HORTICULTURAL SOCIETY.

The Nassau County Horticultural Society held a rose show on June 23rd, which not only brought together roses, but nearly all other flowers in season. The exhibition was open from five until nine P. M., and attracted quite a number of people. A silver cup was given by Ernest Pester, Glen Cove, silver medals by Adolph Jaenicke, Floral Park, and Charles Bertanzel, Roslyn, and there were a number of prizes offered by the society. Some things were put up only for exhibition, which included a fine display of cutters from John F. Johnston, gardener to Paul Dana. The show committee of which S. J. Trepass was chairman, deserve credit for the way they discharged their duties. Adolph Jaenicke and Charles Bertanzel acted as judges. The awards were as follows:

Collection of roses, 1st, silver cup, George Wilson, gardener to Mrs. B. Stern; 2nd, Alex. Lothman, gardener to E. R. Eldridge. Sweet peas, 1st, silver medal, C. W. Knight, gardener to Mrs. E. R. Lawlor; 2nd, S. J. Trepass, gardener to J. R. Maxwell. Certificate of culture, George Ashworth, gardener Queen estate. Honorable mention, Henry Gaut, gardener to H. L. Pratt. Collection of outdoor flowers, 1st, silver medal, Valentine Clares, gardener to F. S. Smith. Vote of thanks, Ernest Pester. Collection of crimson ramblers, certificate of merit, Henry Gaut. Vase of crimson ramblers, Oscar Adder. Delphiniums, cultural certificate, Alex. Mackenzie, gardener to Percy Clapham. Lilium candidum, Geo. Wilson. Japanese iris, Alex. Lothman. Phlox Drummondii, Oscar Adder. Gloxinias, 1st, C. W. Knight; 2nd, V. Clares. Orchids, highly recommended, Alex. Lothman. Certificate of culture, C. W. Knight. Collection of vegetables, H. F. Meyer, gardener to J. L. Delamar. Lettuce, 1st, V. Clares; 2nd, H. F. Meyer. Tomatoes, 1st, cultural certificate, H. F. Meyer; 2nd, A. Lothman.

At the close of the exhibition the society met and discussed some important matters. They have decided to make Pembroke Hall their headquarters holding meetings as usual the second Wednesday of each month.

JAS. KESSON, Rec. Sec.

## NORTH SHORE HORTICULTURAL SOCIETY.

The annual rose and strawberry show of the North Shore Horticultural Society was held at Manchester, Mass., on June 21 and 22, under a large canvas tent pitched on the grounds of the Essex County Club. The entries were almost entirely from the garden, or the summer colony and a most beautiful display of roses, sweet peas and other flowers was shown and an unusual large number of special prizes were awarded. The Highland cup offered by Mrs. W. B. Waller for best collection of delphiniums was won by William Swan, who also took second prize for best group of plants arranged for effect, the first prize, a silver loving cup being taken by Mrs. Foster Leland. These two groups were the most conspicuous exhibits of the show. A silver cup to Mrs. Jas. McMillan for H. T. roses and gold medals to Mrs. McMillan and Mrs. G. E. Cribbet for lines of roses arranged for effect were among the most notable awards.

## NEWPORT HORTICULTURAL SOCIETY.

The June exhibition of the Newport Horticultural Society opened auspiciously in Masonic Hall, June 23, showing a wide variety and an excellency of quality which has seldom been outdone by any of its predecessors.

It was principally an exhibition of roses and it is declared that seldom, if ever, has this flower been seen here in a higher state of perfection. There were also collections of herbaceous flowers, tuberous begonias including the frilled varieties, specimen ferns and other foliage plants from the many private conservatories of Newport.

Mrs. Robt. Goelet, gardener Colin Robertson; Mrs. T. O. Richardson, gardener James Robertson; Wm. Astor, gardener James Boyd; H. D. Auchincloss, gardener John Mahan; Miss F. Foster, gardener M. Biegholdt; W. W. Astor, gardener Hugh Williamson; Miss S. B. Fay, gardener M. H. Walsh; Prof. W. B. Greene, Jr., gardener Samuel Speers, were some of the names on the prize winning cards. Special awards were made as follows: Silver medal to Paul Volquardson for crested tuberous begonias; bronze medals to W. G. Postings for sweet pea, Sutton's Queen, and E. G. Hill Company, for rose Rhea Reid. Certificates of merit to Mrs. T. O. Richardson for single dahlias, Bruce Butterson for rose Princess Marie Salm, Paul Volquardson for superior culture of gloxinias, Mrs. Jos. Harriman for campanulas, Mrs. E. C. Post for campanulas, Miss Alice Keteltas for herbaceous flowers, etc. The judges were P. Volquardson, Bruce Butterson and J. Baumgarten.

## TARRYTOWN HORTICULTURAL SOCIETY.

The monthly meeting of this Society was held on Friday evening, June 26, with Pres. Angus in the chair.

Mrs. F. A. Constable, Mamaroneck, N. Y., was elected life member, Mrs. K. E. Driscoll Tarrytown, N. Y., honorary member, also Frank Shaw, Elmsford, N. Y., active member, and five new nominations were received.

A very fine collection of shrub and hardy perennial flowers, all labeled, were staged by Frank L. Milne, gardener to Mr. E. K. Weatherbee; they were awarded the prize offered for the evening, also a certificate of merit.

The annual outing was on the program, and the committee of last year, Messrs. J. W. Smith, Wm. Scott and L. A. Martin, were reappointed to arrange everything. They have selected Edwards' Beach Hotel, Rye Beach, N. Y., for August 4, 1908. A very fine time is anticipated, as there will be a selection of games and suitable prizes for minors. Tickets, \$1.50, can be had from Secretary Neulrand or any member of the committee.

L. A. MARTIN, Cor. Sec.

P. Hamilton Goodsell, formerly with F. W. Kelsey, has opened offices at 200 Broadway, New York, for furnishing high grade nursery stock.

## CLUB AND SOCIETY NOTES.

Arthur Cowee, Berlin, N. Y., will speak on the Gladiolus at the July meeting of the Florists' Club of Philadelphia.

At the annual field meeting of the New Hampshire Horticultural Society at Goffstown on June 25, Prof. E. J. Sanderson of the State Agricultural College was elected secretary to succeed H. F. Hall. Dr. H. W. Collingwood delivered a practical address on "Raising Fruit on Rough Land."

At the rose and strawberry show of the Worcester County Horticultural Society, Worcester, Mass., on June 25, Addison Bemis showed some handsome roses; E. W. Breed and Mrs. E. A. Underwood had fine collections of sweet william and W. A. Baisley of Uxbridge exhibited foxglove and sweet william.

At the last meeting of the Retail Florists' Association, at Brooklyn, N. Y., thirty-five new members were added, which brings the membership up to over one hundred. The first reading of the constitution and by-laws was had and they were partly approved. The next meeting will be held at the Imperial rooms on July 13.

## GREENHOUSES BUILDING OR CONTEMPLATED.

Mystic, Conn.—J. H. Snauffer, house 21x50.

Waynesboro, Va.—H. R. Happle, one house.

Port Huron, Mich.—C. W. Asman, chrysanthemum house, 16x100.

Brookfield, Mo.—Miss Gertrude Jones, two houses, 15x50, 20x100.

William Taylor of Cumberland, R. I., while assisting the Chief of Police in the arrest of a reckless Greek, was shot and probably fatally wounded.

# LILIUM HARRISII

We offer a selected stock of the original true Harrisii for early forcing. These bulbs have been grown from the original pure Harrisii, and will be found to be splendid stock for early forcing, for which purpose Harrisii is so valuable. We have had the stock inspected, and are assured that it is almost absolutely pure and almost entirely free from disease. This is not stock picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered, both in regard to freedom from disease and purity, and not the late type now so often furnished.

Lilium Harrisii has been deteriorating slowly for years, and in order to get back to the true type of the original Harrisii, we have had our stock grown from the original pure stock, and it will be found very superior to the Lilium Harrisii usually offered. While the stock is A No. 1, our prices are as low as, or lower than, the prices asked for indifferent stock.

We have only a limited quantity of this stock to offer, so it will be advisable to place order without delay in order to ensure securing this stock. Bulbs ready for delivery middle to last of July.

6-7 in. bulbs, 350 to the case, \$6.00 per 100, \$50.00 per 1000 }  
 7-9 in. bulbs, 200 to the case, 9.00 per 100, 80.00 per 1000 } Full Case Lots at Thousand Rates  
 9-11 in. bulbs, 100 to the case, 18.00 per 100, 170.00 per 1000 }

**FREESIA REFRACTA ALBA** Bermuda-grown, finest selected bulbs, 1/2-in. up, \$1 per 100, \$7.50 per 1000.  
 French-grown, Mammoth size, 3/4-in. up, \$1.50 per 100, \$12 per 1000.

**F. R. PIERSON CO., Tarrytown-on-Hudson, New York**

## ORCHIDS

We beg to announce the following fresh arrivals of Orchids all in finest condition.

**CATTLEYA DOWIANA.** Of this fine, rare and beautiful orchid we have a splendid shipment to hand.

**CATTLEYA LABIATA.** This is the third and last lot this season.

**CATTLEYA TRIANE.** The second lot to arrive in perfect condition. A third lot to arrive shortly; the greater part of these must be sold as we cannot spare the room. Order a sample case, and you will be surprised.

**CATTLEYA GASKELLIANA** and **CATTLEYA MOSSIE** in fine shape. Also **DENDROBIUM FORMOSUM**, **VANDA COERULEA**, **ONCIDIUM SPLENDIDUM** and **LAELIA DIGBYANA**.

Write us for prices and we can assure you that you will be well pleased both as to quality of plants and price of same.

We also have a full line of supplies such as peat, live sphagnum and orchid baskets in all sizes.

**LAGER & HURRELL, Summit, N. J.**

## FERN SEEDLINGS

Eight of the best varieties in fine condition now ready. \$1.00 per 100; \$8.50 per 1000. If by mail add 10 cents for postage.

**Assorted Ferns for Jardinieres**, bushy plants. \$3.00 per 100; \$25.00 per 1000; 100 at 1000 rate

**Adiantum Cuneatum**, 2 1/4 in., \$3.00 per 100; \$5.00 per 1000.

**Asparagus Plumosus Nanus**, 2 1/4 in., \$3.00 per 100; \$25.00 per 1000

**Frank N. Eskesen**  
 Madison, N. J.

## Smilax

Good, strong plants, 2 1/4 in. pots, \$1.75 per 100 \$15.00 per 1000. Cash with order.

**A. V. D. SNYDER, Ridgwood, N. J.**

## GERANIUMS

Strong, stocky plants in bud and bloom: scarlet; crimson; white and pink. 4 in. pots, \$6 per 100

### DURING RECESS.

A ball game between the Niessen and Burton employes will be one of the exciting events of the national holiday, July 4th. It will take place at Alfred Burton's, Chestnut Hill, Pa.

On Sunday, June 28, A. Mayer, Chicago, entertained about thirty of A. L. Randall & Co.'s employes, members of the firm included. Mr. Mayer furnished refreshments and a good time was enjoyed by all.

The New York and New Jersey Plant Growers' Association's picnic at Staten Island on June 25 was attended by about sixty of the leading growers and they had a glorious time. Meals were served at the Huguenot Hotel and there was bowling for both ladies and gentlemen, an auto ride to the beach and other diversions. F. L. Atkins officiated as toastmaster and there were interesting speeches by nearly all present. The fun lasted until 9 P. M.

The suspense is over at last and among the dozen or more ambitious bowlers who entered the contests to win the coveted five free transportations to the Niagara Falls Convention offered by President Traendly, Jos. S. Fenrich is the only one who succeeded in qualifying with the stipulated average score of 155 or more in the series of practice games. Mr. Fenrich's figure is 160 and next to him comes Jos. A. Manda with 154 and 17-balls, just one each each of a point shy.

### NEW YORK FLORIST CLUB OUTING.

This pleasant annual event came off on Wednesday, July 1, at Witz's Point View Grove, Long Island, and was the largest and best affair of its kind in the history of the club. The weather was perfect, the program was carried out in full, and the con-

hundred members and their ladies and children enjoyed themselves to the fullest extent without a single untoward incident. The base ball game between the married and single men was won by the latter with a score of five to one. Louis Schmutz, Jr., was winner of the first baby prize, and Mrs. Dupuy won first in the ladies' bowling games. In the race for girls' and boys' classes graduated according to ages, the winners of first prizes were Jeannette Marshall, Joe Sullivan, Gertrude Schneimel, Jos. Walter, Kate Meisem, Donald Marshall, Ethel Adams, Robt. Barnett, Louise Millang, Phil. Walter, Freda Schenck, Ed. Manda, Annie Birnie, George Krekeler, Lula Whitman. Mrs. Hornecker won the married ladies' race, Mr. Phillips the married men's race, Jos. A. Manda the 150-yard race, Frank H. Traendly the fat men's race. There were seconds and thirds and "also rans" in all of these contests, but time and space do not permit a more extended list. The men's bowling contest was not completed. High score in five frames was Fred W. Lentz with 106.

### PICNICS IN PROSPECT.

Florists' Club, Columbus, O., July 15, at Buckeye Lake.

Florists' Club, St. Louis, Mo., July 15, at Normandie Grove.

Florists' Club, Chicago, July 15, at Morton Grove, Ill.

### HAVOC OF WIND AND HAIL.

Charles Benson, Denver, Colo., 2,000 lights of glass.

The Dayton Floral Co., Dayton, O., suffered considerable loss in a recent storm.

The Park Floral Co., Denver, Colo., 22,000 square feet of glass and 16,000 carnation plants; value, \$6,000.

The greenhouses of the Lamborn Floral Co., Alliance, O., were badly damaged by a storm on June 19.

### HORTICULTURAL ILLUSTRATIONS.

Philadelphia has long been famous for the high quality of her horticultural printing. Twenty-five years ago, when the Purpee-Maule-Dreer catalogues struck a new stride in the American seed trade, the men who made the wood cuts and later the half tones, also became world renowned; in fact, wherever an up-to-date seedsman was located in any part of the world he looked to Philadelphia for good cuts to embellish his catalogue.

Among the earliest pioneers in half-tone work in Philadelphia the firm of Gatchell & Manning has been and is at present the leader not only in half-tone, etching, line-work, wash-drawing, etc., but also in original designing and color processes. In the latter connection they have just issued a little folder "How to Do It," showing the latest improved method of multi-color plate making from an original photograph. From these plates any printer can produce excellent color work, almost equal to lithographed, on an ordinary printing press. Every florist, nurseryman or seedsman, whether he issues a catalogue or not, can use this new process to elegant advantage and can acquaint themselves with same by dropping a postal to this company.

You will find something worth reading on every page of HORTICULTURE.

## Seed Trade

### AMERICAN SEED TRADE ASSOCIATION.

Address of President George S. Green, at the Annual Meeting, Milwaukee, Wis.

#### President's Address.

We meet at the end of a business year of unusual stress and uncertainty, during which the country has had a serious set-back to the prosperity of the past few years. Such a year always brings new problems to be met and new difficulties to be surmounted. These problems and difficulties test the temper of the man and, when conquered, usually leave him with a new store of experience and knowledge with which to meet future tasks.

#### Satisfactory Trade Conditions.

We are all still doing business, no financial disaster among our membership having come to my knowledge. This is evidence of the permanent character of our trade and of the average ability and prudence of our members. I congratulate you upon this showing and I hope the coming year may prove less trying. I trust the efforts which have been made to improve the currency and banking system of our country may insure more stable conditions, so that the business man may suffer only for his own blunders and not for those of others. Tight money last fall undoubtedly hampered the operations of our trade and if the recent currency legislation shall prove effective in preventing such conditions in future, we shall have at least that much for to thank our national lawmakers. Notwithstanding the unsettled financial conditions, the past year has been reasonably satisfactory to most houses in the trade. The total volume of business has been large and prices have ruled unusually high on many staple articles in the seed line. The demand for high grade goods continues to increase and there has never been a time when a well-earned reputation for furnishing seeds of first-class quality was more valuable than it is today.

#### The Tariff Question.

As there has been no revision of the tariff during the past year, there has been no necessity for special action on the part of the Committee on Tariff and Customs, but since the question of tariff revision seems likely to have attention in Congress in the near future, it is essential that our committee be ready to furnish information to the Congressional Committee which will have this matter in charge. After my experience this spring as to the difficulty of doing such work during the rush of the seed season, I am impressed with the importance of having this subject studied during the next six months by a competent committee which should make a definite report to the next Executive Committee meeting so that the wishes of the seed trade may be properly presented in the most effective manner at the proper time. In this connection, I wish to indorse the suggestion of my predecessor, Mr. Wood, as to the desirability of specific duties, in preference to ad valorem duties.

#### Irrigation Work.

The progress of irrigation projects and the reclamation of swamp lands are matters of vital interest to this association. The United States Government is building several large dams for the impounding of flood waters which will be used for the irrigation of hundreds of thousands of acres of desert land. More work in this line has been done during the past year than in any former year in the history of our country. Reclamation of swamp lands is also making progress and the total increase in arable land from those two sources will be very considerable during the next few years. I recommend that this Association continue its policy of sending a delegate to the National Irrigation Congress and that we do all in our power in furtherance of such work.

#### Grass and Field Seeds Still Sold by Measure.

I regret that after more or less con-

tinuous effort for many years on the part of this association through a standing Committee on Weights and Measures, it seems impossible to secure uniformity in all the leading markets of the country as to the sale of grass and field seeds by the hundred weight. The bushel still holds its place on many price-lists. I recommend that the Committee on Weights and Measures be discontinued, but if any member can suggest a plan by which the use of the central system can be made universal among dealers, it would be well to try it. Successive chairmen of the Committee on Weights and Measures have labored in vain for years and I see no prospect for success, unless we can devise new arguments which will be more effective than those thus far employed. All markets using the central system are well pleased with it, but this seems to have no effect upon dealers in markets where the bushel system still prevails.

During the past year death has claimed two of our members. Mr. Everett R. Clark, of Milford, Conn., who was chosen president of our organization at its sixteenth annual meeting, and Mr. Alfred Plant, of St. Louis, Mo., one of the pioneer seedsmen of the West. Within the past year has also occurred the death of Mr. D. M. Ferry, whose firm, while not members of our Association, has for many years occupied a most prominent position in the seed trade.

#### The Mann Pure Seed Bill.

The most important development of the year in the seed trade was the introduction into the House of Representatives of H. R. 13835, known as the Mann Pure Seed Bill. This bill, while doubtless intended to protect this country against the importation of objectionable weeds, and to prevent fraud and misrepresentation, was so worded as to have caused serious harm to legitimate business. It was introduced into the house Jan. 15th, 1908, by Hon. James R. Mann and referred to the Committee on Interstate and Foreign Commerce. Hearings were had on Feb. 4th and 6th, at which representatives of the United States Department of Agriculture were the only witnesses. So far as I am aware, no special effort was made at Washington to notify seed dealers of the introduction of this bill, but Mr. Mann states in one of his letters to me that announcements of the hearings were made public through the usual channels.

My first knowledge of the bill came through Mr. Chas. N. Page of the Iowa Seed Co., about March 4th. I wrote to Mr. Mann requesting him to mail me a copy of the bill and also to send copies to members of our Committee on Seed Legislation. He wrote me under date of March 9th asking if we wished a hearing upon the bill, or desired to suggest modifications in it, but before I could confer with the Committee on Seed Legislation or plan any united action in the matter, I learned through Mr. Bolgiano that the bill would be reported to the House without delay. I wired a protest to Mr. Mann and also to Mr. Hepburn, the chairman of the committee, and also arranged for other telegrams of protest. Notwithstanding this, the bill was reported to the House on March 20th in pursuance of favorable action by the committee which, Mr. Mann informed me, was taken about a month prior to that date. When this fact was known, an informal meeting of ten or twelve seedsmen was hastily arranged at Chicago. The Mann Bill was discussed and it was agreed that the most necessary thing to be done was to get a rehearing before the Committee on Interstate and Foreign Commerce. After much discussion as to who should undertake the task of going to Washington to secure a rehearing, Mr. Charles Dickinson agreed to go. He was successful in his mission and a rehearing was set for April 21st.

#### Meeting and Appointment of Special Committee.

I then wrote a letter to the trade appointing a representative meeting of seedsmen at Chicago on April 10th. About twenty-five firms were represented at this meeting and many other firms have shown an active interest in the matter, including a number of firms not members of the Association. At the meeting of April 10th, the Mann Bill was thoroughly discussed in an all day session lasting until late in the evening. Desirable changes in the bill were suggested, resolutions were adopted, and a committee authorized to represent the seed trade at the hearing April 21st.

Later, the following committee was appointed as follows: J. C. Woodman, Chas. N. Page, Chas. Dickinson, Walter P. Stokes, Jr. and J. R. Kline. I also secured on this committee as chairman. This committee had an informal conference with Mr. Mann on April 20th, at which Dr. A. E. Woods, Mr. Edgar Brown and Professor W. W. Tracy, Sr., of the Department of Agriculture, were present. At this meeting Mr. Mann expressed his willingness to make changes in the bill to meet the requirements of the seed trade, provided the changes would not permit the continuance of the abuses at which the bill was aimed. Many of the changes which we desired were apparently acceptable to Mr. Mann, others were not, but we left him feeling reasonably sure that the bill would probably not be pressed for passage in its original form. I believe that the work done by the committee that day will go far toward modifying the character of any bill which Mr. Mann may hereafter urge for passage.

#### Public Hearing at Washington.

The public hearing before the Committee on Interstate and Foreign Commerce was held the following day, April 21st. Our arguments were presented quite fully and a revised copy of the bill placed in the record embodying all the suggestions for changes which had been presented to Mr. Mann the previous day. In addition to the members of the committee, the following gentlemen presented arguments: Alexander Forbes, of Peter Henderson & Co.; Curtis Nye Smith, of Jos. Brock & Sons' Corp.; S. F. Willard, of Comstock, Ferre & Co.; E. V. Hallock, of Queens, N. Y. Among other seedsmen in attendance at the hearing were, Mr. E. W. Bolgiano, Washington, D. C.; Mr. C. E. Dungan, of Wm. Henry Maule, Philadelphia, Pa.; Mr. Harry L. Holmes, Harrisburg, Pa. At the close of the hearing, we were assured that no further action would be taken upon the bill at that session of Congress and that our arguments, together with letters received by Mr. Mann, would be made a part of the records of the committee. In this connection, I wish to acknowledge the courtesy and fairness which were shown us at Washington. Our arguments were heard with patience, ample time was given us and I could see no evidence in any quarter of an intention to injure the seedsmen as a class. The full account of the proceedings at the public hearing has been printed as a public document and at my request copies were mailed to all members of our association.

#### What the Revised Bill Embodies.

It should be fully understood that the revised bill printed as a part of my statement on pages 34, 35 and 36, simply embodies the changes in the original bill suggested by our committee to Mr. Mann and that none of these suggestions have been formally accepted by the Committee on Interstate and Foreign Commerce. It should also be understood that the original bill is still on the calendar of the House of Representatives on the original report of the committee and might be called up for action at the next session of Congress without any modifications whatever. I believe, however, that Mr. Mann will probably ask to have it again referred to the committee and that important changes will be made in it before it is again submitted to the House.

#### The Question of National Legislation.

This brings to us the necessity of being ready to meet in a practical and efficient manner the question of national legislation regulating the importation of and interstate commerce in seeds. Opinion among our members is doubtless divided as to the possibility of framing wise legislation on this subject, but I regard it as highly important that we show in some manner our interest in this subject and our earnest desire to maintain a high standard of business integrity in our trade. I assume that if we take the attitude of opposing all regulation, we shall lose an opportunity to assist in shaping a law which will be helpful rather than harmful to those dealing and who may prove highly interested in the cultural interests of our country. I believe furthermore that if we should be shortsighted enough to oppose all national regulation of our business, it could only hasten the day when every state will enact a seed law of its own make. These laws would probably vary very materially in such an extent that interstate business in seeds would be very seriously

crippled, whereas a well worded, just and effective national law would doubtless serve as a model for state laws which could easily be framed to conform to its conditions and thus restrict interstate business but slightly. I feel confident that national legislation to prevent the importation of seeds used solely as adulterants and of low grade seed containing large percentages of weed seeds and to correct other abuses in the trade is inevitable. It is in line with the great projects for the betterment of trade conditions and for the conservation of natural resources to which the present administration at Washington has practically committed the American people. If we try to stop this flood of public opinion with our little dam, we shall only find the water flowing over the top of it and the whole works will go out with much damage to ourselves and to others, but if we work harmoniously with the people at Washington for the improvement of American agriculture, adding our practical business experience to their technical and legal knowledge and thus secure a just and helpful law which will really tend toward the planting of better seeds, we shall have the consciousness of having worked for progress rather than against it.

#### The Need of Proper Restraint.

There is a feeling on the part of some of our members that we are being discriminated against unfairly in the attempt to pass any law. When we consider the many abuses connected with some other lines of business which the law has never attempted to reach and the high average standard of morality and business uprightness among seedsmen, this view is perhaps a natural one, but I cannot altogether sympathize with it. The fact that the purchaser of seeds has frequently no means of knowing the real character of the goods he is buying is a temptation to the unscrupulous and the dishonest. It permits the growth of mushroom competition which is an injury to the honest seedsmen as well as to the buyer of the unreliable goods. We should welcome the opportunity to place our business on a higher plane, to eliminate dishonest competition and to help to save the soil of our country from the invasion of foreign weeds. We should have enough patriotism to give our hearty support to any measure which is really for the general welfare and which does not work an injustice to individuals. I am of the opinion that our business can soon be adjusted to a moderate and well considered law, which does not require us to do what is manifestly impracticable, but which will prevent the importation of seeds unfit for seeding purposes and will also provide for the punishment of deliberate and intentional adulteration of seeds.

#### Where the Mann Bill is Objectionable.

The natural conditions attending the production of seeds the tendency of plants to depart from fixed types the production of sports cross fertilization of seeds the possibility of erroneous information from growers—should all be carefully considered in making a law holding dealers responsible. The broad principle of equity that a man should be held to account only for his own intentional misdeeds should be made part of any such law. I have opposed the original Mann Pansy Seed Bill for the following principal reasons:

First. It provides heavy fines and prison penalty for offenses that may, in practice, undoubtedly would occur through errors or omissions of employees in the properly marking and packing or handling seeds, thus making innocent men liable in the eyes of the law. This is to prevent to the American spirit of fairness.

Second. The law does not fairly allow for the exception from its provisions of seeds while in transit or held in storage for the purpose of cleaning or grading, or while in process of cleaning or grading or held in storage after cleaning or grading, before being offered for seeding purposes. Such exception is absolutely necessary to avoid complete disorganization of existing methods of distributing and handling old and new seeds.

Third. The third provision of Section 3 regarding the importation of seeds containing weed seeds would absolutely prevent the importation of any imported varieties of vegetable seeds the best of which are capable of containing certain varieties of weeds over 20 per cent of dead seeds, which cannot be detected by any known process of cleaning, the seeds that appear to be clean and other high grade, purely American varieties of which contain not only more or

## "STOKES STANDARD" PANSY SEED

**Stokes' Standard Mixed Pansy** is the finest strain of Giant Pansies it is possible to produce. It is a blend of all that is finest in Pansies from France, England and Germany. It is absolutely unrivaled in range of magnificent colors, size and substance. Trade pkt. (2000 seeds) 50c;  $\frac{1}{8}$  oz. 85c;  $\frac{1}{2}$  oz. \$3.25; 1 oz. \$6.00;  $\frac{1}{4}$  lb. \$20.00.

**Kingly Collection of Giant Pansies Mixed.** A most excellent strain, the same as has been sold for years by the late firm of Johnson and Stokes and has given great satisfaction. Price,  $\frac{1}{2}$  trade pkt. 30c; trade pkt. (2000 seeds) 50c; 5000 seeds \$1.00; per oz. \$5.00; per  $\frac{1}{4}$  lb. \$14.00.

**Send for Special Pansy Circular**

FRENCH and DUTCH BULBS in season—GET PRICES

### STOKES' SEED STORE, 219 Market St., Philadelphia, Pa.

less dead seeds, the percentage varying with crop and harvest conditions where the seeds are grown.

Fourth. The fourth provision of Section 3 would practically prohibit the bulking of various qualities of seeds, for the purpose of making uniform grades, because many merchantable and valuable parcels of seeds contain considerable percentages of dead seed and weed seed, and no dealer would feel safe under this section, as now worded, in bulking together a number of parcels of natural seeds, since the addition of a single bag of comparatively low vitality or containing a comparatively large percentage of weed seeds might be construed to be adulteration, even though in the process of cleaning the average quality of the entire bulking of seed had been greatly improved. This paragraph should certainly provide a penalty only for deliberate adulteration with intent to defraud the buyer.

Fifth. The bill undertakes to prohibit the export of certain grades of seed for which there is a demand abroad and it is against public policy to restrict such export. Such a restriction would tend to cause the exporter to select only the highest qualities for export and thus retain the lower grades for domestic use.

Sixth. The natural and inherent conditions attending the production and distribution of grass, clover and field seeds are so totally different from those attending the production and distribution of vegetable and flower seeds and bulbs, that I believe that these two classes of trade should be separately provided for in any well-considered legislation, either by means of separate laws or separate paragraphs.

It seems to me that it should be possible to eliminate the objections to this bill and yet preserve its evident intent to benefit American agriculture.

#### Recommendations.

It is urgently important that the subject of seed legislation receive the best attention which it is in our power to give it and in this connection, I strongly recommend that the two standing committees on Seed Legislation and on Seed Adulteration be consolidated into one committee. This will avoid any question of divided authority or responsibility. I trust a strong committee will be appointed and I think that this committee should be authorized to secure legal advice at any time when they may deem it necessary, and that arrangements should be made, so that they could draw upon some fund which would provide for all necessary expenses in connection with their work. I also recommend that an earnest effort be made to secure a joint conference of this committee with representatives of the Committee on Interstate and Foreign Commerce and experts from the Department of Agriculture for the purpose of working out a fair and just law. In expressing a willingness to work toward the making of a law for the regulation of our business, it must be understood that we unhesitatingly assert that our trade now shows without such regulation a high average standard of integrity. Each year the average standard of quality demanded by the buyer of seeds and supplied by dealers tends toward improvement, regardless of any law. This improvement results partially from an awakened intelligence on the part of buyers, but very largely also from the constant efforts of dealers to improve the quality of the goods

they offer for sale. This tendency will persist and may safely be depended upon to gradually correct all but the grosser forms of fraud and misrepresentation.

#### Honor and Integrity Superior to Law.

Perfection will not come because of the passage of any law, but only as the gradual and natural development of human character and human needs. Criminal law is made primarily "to hold the wretch in order", and so far as possible it should be confined to its legitimate province. It is but a crude instrument at best to replace the honor and integrity among men which make modern business possible. Hence, we think that an untried law covering a new field should only be aimed at flagrant, wilful and deliberate wrongdoing and should not contain provisions tending to hamper and disorganize a highly useful and necessary business.

In conclusion, I wish to express my sincere appreciation of the able assistance which has been given me during the past year by many of the members of this Association. I am grateful for the active interest which has been shown by the Executive Committee and for the efficient team work of the committee and other seedsmen who attended the hearing at Washington. Differences of opinion have naturally arisen, but they have been adjusted on the broad basis of consideration for the general welfare of the organization. With such a spirit, we may look forward with confidence to the future usefulness of our Association, not only as a means of furthering our individual interests, but of promoting the general welfare of American agriculture.

#### President-elect W. S. Woodruff.

Watson S. Woodruff, the newly-elected president of the American Seed Trade Association, was born at Orange, Conn., April 8, 1869. His father, Stiles D. Woodruff, was one of the pioneer seed growers of Connecticut, starting in the seed growing business on his return from the Civil War in 1865. He was graduated from the New Haven High School in 1889, shortly after which he went actively into the seed business, associating himself with his father, Stiles

## VEGETABLE PLANTS

**CABBAGE** Wakefield, Early Flat Dutch, Early Allhead, Early Drumhead and other early varieties. Surehead, Late Flat Dutch, and other late varieties at 20c per 100, \$1.00 per 1,000, \$8.50 per 10,000.

**R. VINCENT JR. & SONS CO.** WHITE MARSH, MD.

D. Woodruff, and his brother, Frank C. Woodruff, under the firm title of S. D. Woodruff & Sons. He married January 4th, 1892, Harriet Hotchkiss, and to them have been born five children, three girls and two boys all of whom are living. Stiles D. Woodruff died in April, 1906. The present firm of S. D. Woodruff & Sons is made up of Frank C. Woodruff and Watson S. Woodruff. The firm makes a specialty of market gardeners' seeds and does a large growing and wholesale business as well. The firm operates at Orange, Conn., and 82 Dey street, New York City, with a branch also at Queens, L. I.

#### SEED TRADE NOTES.

W. Atlee Burpee, who has been abroad several weeks, is expected to sail for home July 3rd.

Howard M. Earl, of Burpee's, Philadelphia, returned June 29th from his seed inspection trip across the continent.

E. A. Brown, of W. Atlee Burpee & Co., Philadelphia, and Mr. Fell, of Wm. Fell & Co., sail for a trip to Europe July 4th.

Winterson Seed Co., of Wabash avenue, Chicago, report the close of a satisfactory season. They consider the outlook for peas and beans as not quite so good as usual.

Charged with the theft of 60 axes from Joseph Breck & Sons, Boston, F. J. Roache was arrested and sentenced to one month's imprisonment at Deer Island. Roache was elevator boy at the store. He is married and has a family.

The National Seed Co., of Chicago, express satisfaction over the result of the season's trade, considering it is an off year and their first in business. This company is favorably located on the way to the Northwestern and Union stations as well as on the elevated loop.

Large sized calla bulbs are very scarce this year.

## Of Interest to Retail Florists.

Business conditions are  
DETROIT ever so much brighter  
than two weeks ago;  
everybody putting in long hours to fill  
the demand for seasonable occasions.  
Peonies are all gone and roses being  
very small, supremacy has been given  
sweet peas. Real pretty they are too,  
whether in a casket cover or bridal  
outfit, although lily of the valley is the  
rule for bridal bouquets. A very pretty  
but rather large bridal bouquet was  
seen made of Shasta daisies showered  
with No. 2 white gauze. Another  
stunning bridal outfit was shipped up  
the state consisting of a bunch of  
valley showered with baby ribbon and

#### PERSONAL.

Visitors in New York: D. Samuels, of the Ogden Floral Co., Ogden, Utah.

Visitors in Boston: J. B. Kidd, New York, N. Y.; J. S. Hay, Philadelphia, Pa.

G. W. Butterworth of So. Framingham, Mass., sails on July 4 for a visit to England.

Wm. Hielscher, of Detroit, with his mother, left a short time ago to visit his sister in Portland, Ore.

Irma, daughter of Mr. and Mrs. John Bertermann, of Indianapolis, and Alfred Brandt were married on June 30.

Thos. Browne of Detroit will in a short time put a carnation support on the market which looks to be a winner.

F. C. Weber, of St. Louis, with his wife, daughter and the Misses Meinhardt, is making a tour of the western states.

Wm. Anderson, South Lancaster, Mass., sailed on July 3 for a visit to Scotland. His wife and son accompanied him.

Visitors in Pittsburg: Frank Pesternack, of Ernst Wienhoeber Co., of Chicago, attending Victor Bergman's wedding.

Louis Wittbold of Chicago is going to Wheeling, Ill., for a couple of weeks' quiet. Mr. Wittbold is especially interested at this time in his concrete benches.

Herman Kister and Ben Starkey, of Pennock Bros., Phila., are receiving congratulations from their friends on their safety after an exciting immersion in Jersey waters during a recent boating trip.

Peter Sioczynski with his wife and son left Chicago Saturday, the 27th, for a trip to the fatherland. They sailed from New York on the Kaiser William der Grosse on the 30th and will visit Berlin, then go on to the old home at Ponaes, where Mr. S.'s mother still lives.

Albert Knopf, Columbus, O., was presented with a locket charm engraved with a handsome floral design and the club monogram, by the members of the Columbus Florists' Club on June 25. Mr. Knopf has been an interested member and it is hoped that his trip to California will bring him the health that he seeks.

Visitors in Chicago: John Bourgaize, North Side Greenhouses, Racine,

Wis.; C. W. Eichling, New Orleans, La.; Jno. Dallman, Missoula Nursery Co., Missoula, Mont.; Miss Agnes Ridgen, Ottawa, Ill.; Fred Chapman, of the Clinton Falls Nursery Co., Clinton Falls, Ia.; H. Glenn Fleming, Fairmount, W. Va.

Victor Bergman, for thirteen years with Ernst Wienhoeber Co., Chicago, was married June 30 to Miss Lena Ludwig, of Pittsburg, Pa. The bride is the daughter of a well known florist of Pittsburg. The happy couple will take a trip to Boston before returning to Chicago the latter part of July. They will make their home in Evanston avenue.

#### NEWS NOTES.

The Westerly Burial Co., Westerly, R. I., have installed a large refrigerator and will furnish cut flowers at their down town office.

Mrs. Jas. Lister of Newton, Iowa, has again taken charge of her greenhouses after having leased them for two years. N. P. Madsen will have charge of the growing.

The St. Joseph Loan & Trust Co., of South Bend, Ind., who were appointed, June 2, receivers for the South Bend Floral Co., are now offering the plant for sale.

The Waterloo Nursery Co., recently organized to carry on a wholesale and retail nursery business at Waterloo, Ia., have elected P. C. Schmidt president, and C. H. Dietrich secretary.

Chicago plant trade is practically out, yet good Boston and other ferns are moving and many geraniums which could not be induced to bloom earlier are now finding their places in the market.

F. H. Starr, Corning, N. Y., has purchased the Cheney greenhouses and after locating them on the Reynolds estate and making necessary improvements will place them in charge of Eugene Dusenberre.

The business of the late E. Hippard, Youngstown, Ohio, will be continued under the same name under the management of R. H. Little. The Standard Steam Trap, the Standard Ventilating Machine and Standard Duplex Gutter will be the leading specialties as heretofore.

#### BUSINESS CHANGES.

George A. Rackham, Detroit, Mich., has disposed of his business to Michael Bloy and wife for \$14,000.

T. M. Sorenson, who recently purchased the Stafford greenhouses at Marquette, Mich., has now assumed the management.

"Co." has been dropped from the sign over the door and hereafter James Souden will carry on his business in his own name at Minneapolis, Minn.

R. E. Moir, Whitman, Mass., has sold his greenhouses to P. Boyle of Malden, Mass., who will continue the business. Mrs. Moir will retain the management of the down town store.

George I. Haight has closed out his place of business at West Lane, Ridgefield, Conn., and is building greenhouses on Danbury avenue, which he hopes to have ready to open in September.

## FLOWER MARKET REPORTS

The season has ended **BOSTON** and tranquility broods over the places where, late and early, hustle and worry have been the rule. According to habit, the shipments of flowers come daily to the markets, reduced in quantity, unpretentious as to quality and indifferent as to disposal, and somebody has to care for them; but it is largely an example of fruitless endeavor, and if they should all quit for a couple of weeks nobody would be noticeably poorer. The only roses that are evidently happy in their summer environment are the Kaiserins and Carnots. The less said of the others the better. But a couple of weeks more will give strength to the young stock and perhaps bring the first installment of new season courage to the trade, and so it will not be long before things begin to stir again.

The week of June 22 was **BUFFALO** one of the best weeks for the cut flower trade since Memorial Day. The supply was well handled by the wholesaler, and though some portion of the carnations and roses were somewhat small and inferior, they moved well and at satisfactory prices. Beauties were in good supply as well as Kaiserins, Richmonds and other teas, and select stock moved on sight. The shorter grades of Beauty were more in demand than the long. Outdoor candidum lilies sold rapidly. Longiflorum and auratum are in good supply; outdoor sweet peas are also in good supply and have sold well considering the amount that has been sent in the market. All in all, the past week's business was satisfactory to all though it did not come up to previous years, as many schools were not allowed to have flowers.

The last days of June **CHICAGO** and the early days of July find the Chicago market dull. There is every variety of flower known to the Chicago trade to please the most fastidious customer, but as one wholesale florist expresses it, "The summer business is with us," and the retailers are not using a great deal of stock. Nothing under the standard grade is needed and stock of that kind cannot be used. The whi-

dows in the retail stores are particularly beautiful now, for there is everything to work with and many retailers happily possess the good taste necessary. Prices are not so low as frequently happens in hot weather. Some beautiful gladioli are in the market, among which were noted a particularly fine red variety grown by Zeck & Mann. It is of a clear, deep and beautiful shade and makes a very attractive window flower. These are selling for \$1.50 per dozen, wholesale. Roses are keeping up in quality and prices are not changing much. Sweet peas are often coming in in poor condition. For these there is no sale, but the really good ones sell, and there are many colors to select from. Corn flowers, Shasta daisies and coreopsis are much in evidence. The fern business is quite a feature in the Chicago market at this time. The ferns are cut in northern Michigan and are considered for summer use to be superior to those shipped to this market from Massachusetts. Some Chicago firms require daily shipments.

The market presents an aspect of summer dullness.

**INDIANAPOLIS** Demand is light and arrivals considerable shorter than they have been for some time. Roses are plentiful but generally poor in quality. There is quite a good supply of long-stem Beauties while shorter stock is scarce. Peas are getting scarce and of poor quality. Asters are to be had but not in large quantity. Garden flowers are finding a reasonably good sale. The different kinds of lilies are much in evidence but don't sell readily. There is little business doing in the green line such as maiden hair fern, plumosus and smilax, although considerable outside foliage is being used. The growers are making big preparations for the coming season and are busy rebuilding and improving in general.

A very slow demand **NEW YORK.** and prices tending downward is about the whole story of the flower market this week. Last week was unexpectedly favorable and stock cleaned up well in the latter part of the week. July 1 marks the low ebb and for a time there will be very little to interest either producers or consumers. Club

outing and Independence Day are the chief events of the week, and Niagara Falls is only six weeks away.

There has been **PHILADELPHIA** very little life in this market the past week. One day there was a spurt in American Beauty roses consequent on a big commencement, but outside of that, summer dullness reigned. There was no marked shortage in any line, although receipts have shortened up considerably. Roses, outside of Kaiserins and Liberty were rather poor stock, if we except a few fine Killarneys and American Beauties. Some good outdoor Crocker carnations are coming in showing excellent substance and clear color. We used to get fine outdoor Mrs. Fisher about this time, but this crop seems now to have been abandoned. The lily of the valley market was sluggish. Sweet peas are plentiful and the demand is fair. Orchids are scarce. A few local gardenias are coming in. Auratum and longiflorum lilies are in fair quantity and bring satisfactory returns. Among minor subjects candytuft, achillea, coreopsis, centaurea, gaillardia, gladioli and water lilies are conspicuous.

Business has been **TWIN CITIES** very good the past week; prices keep about the same. Supply nearly equal to the demand. There are very few Beauties. Bride, Bridesmaid and Kaiserin are of good quality and the same may be said of the carnations. Peonies and pansies are off the market.

## BRINGS PRODUCER AND BUYER TOGETHER.

"This spring I wanted some stock that did not prove easy to get. After vain attempts in New Jersey and elsewhere one day a sample copy of HORTICULTURE came to hand and, lo! in it I saw advertised just what I wanted, within 21 miles of home. To do the square thing I think my dollar ought to go forward. Here's your dollar."

Yours,

Rhode Island. E. A. CHIPMAN

## GREENHOUSE HEATING

From The Weekly Florists' Review, Dec. 20, 1906.

### A HEATING RECORD

I have two houses, each 23 x 100, in which I grow lettuce and general stock. I keep a night temperature 50 to 55 degrees. They are heated with hot water. I had a special boiler made to order that has proved itself beyond my expectations. In the winter of 1905-6 I used thirty-one tons of coal at \$1.30 and ten cords of 3-foot wood worth about \$200 per cord. This I thought very reasonable. The circulation is perfect. Last winter in moderate weather, that is, not windy and outside temperature 20 degrees or so above zero, I would leave the boiler nine hours with a variation of but 3 degrees.

Ten days ago I was called to Cleveland over night. The outside temperature was 40 degrees at 2.4 p. m., when I left the boiler, with a gradually sinking mercury. There being no men about, I left instructions that the boiler should not be touched until next morning. My wife, on my return next evening, reported that at 7 p. m. it became quite windy and by 9.30 was freezing, with stormy outlook. When she awoke at 6 a. m., the outside temperature was 20 degrees, and the greenhouses were 47 degrees. I think this is a record for **fifteen hours and twenty minutes without attention.** I would like to hear from anyone who can beat it.

C. S. TEMPLIN, Garrettsville, Ohio.

PATENT APPLIED FOR

## Why My New Curved Iceless Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars incased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: Result, the driest roof ever used for greenhouse purposes.
- 4th. **THE MOST IMPORTANT OF THEM ALL.** The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

**William H. Lutton,** Horticultural Architect and Builder  
West Side Ave Station (C.R.R. of N.J.) Jersey City, N.J.

## The Advance Ventilating Apparatus

"Your machine is the best we have ever used" is what an Ohio florist writes us in remitting for his machine. It is not good only in one part but it is the best in all parts—the results of experience, of careful study, of mechanical construction, best material and backed by moderate prices that makes our line so popular. Give us a trial.

## THE POINT IS THIS

Here is a greenhouse construction that is entirely free from any heavy supporting members. The roof is a clean sweep of unobstructed glass, from ridge to sill. There is no shade casting gutter. The glass is spaced 24 inches instead of 16 inches. All this makes it possible for more light to reach your plants than in any other construction. All the interior iron parts are galvanized and finished with a glistening, enduring aluminum paint. The entire equipment of benches, ventilating apparatus, and heating plant is of the highest order. Then, to these advantages add those of attractiveness and endurance. The catalog points out in an interesting way, the structural strong points. It is arranged in such a manner as to be of great assistance to you in selecting houses for your particular wants. There are some dozen or more greenhouse subjects treated, with plans, and exterior and interior views. In fact, it is indispensable to those intending to build a greenhouse. We will be glad to mail a copy to any gardener or superintendent sending a request for it.

*The ideal construction for private  
estates, parks, public institutions  
and florists' showrooms*

## Notes from the Arnold Arboretum

One of the most beautiful shrubs now in bloom is the Prairie Rose, *Rosa setigera*, the handsomest of our native Roses when covered with clusters of large pink flowers. In its natural state it is usually found climbing over bushes and attains up to 15 feet in height, while in cultivation it may be trained to cover walls or fences or it may be planted on slopes and banks which it will soon cover with its long arching and trailing branches. It blooms later and more profusely than other native Roses and is also to be recommended for its clean foliage turning in autumn to orange and scarlet.

Another handsome native shrub now in flower is *Ceanothus americanus* with panicles of white flowers, but handsomer is *C. hybridus flore pleno* with light pink flowers. There are also other hybrids of *C. americanus* with flowers in different shades of pink and blue, but most of them are not hardy in the neighborhood of Boston.

A very showy shrub is now *Hydrangea arborescens* var. *grandiflora* with its large heads of pure white flowers; it is certainly one of the best novelties of late years and a welcome substitute for the tender Japanese *H. hortensis*. At its best development it is round bush from four to six feet in height or even higher, the long branches weighed down by the large white flower heads. The creamy white flower clusters of the parent plant, *H. arborescens*, are far less showy as are those of the very similar *H. cinerea* and *H. radiata*. Also *H. paniculata* var. *praecox*, which flowers several weeks earlier than the common form, is now beginning to bloom. *Hydrangea Bretschneideri* is out of bloom some time since, but the sterile flowers of its clusters which are very similar to those of *Viburnum Opulus* are still on the plant though somewhat discolored. It is to be recommended as the earliest of the Hydrangeas and is perfectly hardy.

A very graceful shrub is *Buddleia variabilis* with its branches topped by slender racemes of lilac flowers. As its name implies it is very variable and as the best of its forms the variety *Veitchiana* is to be named which has longer panicles of larger flowers of a deeper color with bright yellow throat. Though it is not perfectly hardy, it pushes forth young shoots freely if killed to the ground and usually flowers again in the same year.

Besides the summer-blooming Spireas mentioned in the last issue *Spiraea Margaritae* must be mentioned as one of the best and most graceful of the flat-clustered kinds; it is a rather tall form with large clusters of bright pink flowers and of less stiff habit than most of the other allied Spireas. Of the kinds with flowers in panicles several forms with broad panicles are now in bloom, as *Spiraea Nobleana*, *S. pachystachys* and *S. syringiflora* with pink flowers and *S. notha* with pinkish white flowers; all these are hybrids between species with flat clusters and those with elongated spikes. Of the latter group the native *S. Douglasii* and *S. Menziesii* and the hybrid *S. Billardii*, all with pink flowers, are beginning to bloom.

The Bladder Senna, *Colutea arborescens*, bears ornamental flowers and fruit at the same time and is now very attractive with its yellow flowers and large bladder-like purplish green pods which will both continue to appear until September; *C. media* is similar but has orange yellow or brownish red flowers. Of other yellow flowered Leguminous shrubs not yet noted may be mentioned here *Cytisus capitatus*, a low shrub with upright stems topped by dense heads of rather large flowers and *C. nigricans* with the flowers in slender elongated

racemes; these shrubs like most *Cytisus* are well suited for sandy or rocky soil and sunny situations. Another very handsome Leguminous shrub is *Indigofera decora* var. *alba*, a low suffrutescent or nearly herbaceous plant with handsome bright green foliage and white flowers in axillary racemes.

Some of the Cherries are now beginning to ripen their fruits; *Prunus pennsylvanica* is very attractive with its small but numerous bright red fruits along its slender branches and also the Sweet and the Sour Cherries, *P. avium* and *P. Cerasus*, are now beautiful with their lustrous red fruits glistening between the foliage; though usually classed as fruit trees, they deserve also a place for their flowers as well as for their fruits in ornamental plantations. Among the most beautiful is, however, the shrubby Japanese *P. tomentosa* which has now its spreading branches densely studded with almost sessile bright red glossy fruits; it is one of the earliest to bloom, but is hardly so beautiful in flower as it is in its present fruiting state.

Alfred Rehder.

## Rhododendrons at Regents Park

Beneath an enormous tent in the Gardens of the Royal Botanic Society at Regents Park, London, there is at the moment of writing a magnificent display of rhododendrons staged by the well-known firm of American plant specialists, Messrs. J. Waterer and Sons of Bagshot. The grand plan is at once effective and artistic and the plants are tastefully arranged. Around the outer edge of the tent there is a long border of good width filled with the plants while in the middle there is a series of shaped beds, with wide paths intervening, also filled with plants in the pink of perfection. The whole show is a brilliant mass of color visible from almost every point and in the aggregate there are about two thousand plants many of which are of great size. About two hundred varieties are included in the collection, the finest of which are probably Pink Pearl, Gomer Waterer, Lady Clementine Welsh, Mrs. Tritton, Fred Waterer, Kate Waterer and Michael Waterer.

But apart from these there are so many other striking and effective varieties that it would be extremely difficult for the uninitiated to make a selection—the lovely shades of white, rose, pink, crimson, etc., being most dazzling in the masses in which they are presented to the public view. A few may be mentioned: Album Elegans, a fine white; Alexr. Adie, bright rosy scarlet, very fine flower; Blandyanum, rosy crimson; Butlerianum, white tinged with pink; B. W. Elliott, clear rose, dark spots; Chinoides, creamy white; Concessum, light centre lined rose; Countess of Tankerville, clear rose; Cynthia, rosy crimson; Delicatissimum, clear white tinted pink; Duchess of Bedford, crimson, light centre; Everestianum, rosy lilac; Francis B. Hayes, white with black spots; Fred Waterer, intense crimson; Gomer Waterer, white, slightly blushed, very large flowers; H. W. Sargeant, crimson; James Mason, light centre with bright scarlet edging; John Waterer, deep carmine, large; Kate Waterer, clear rosy crimson, blotched yellow; Loquendum, scarlet with white centre; Mme. Carvalho, white; Minnie, bluish white; Mrs. Holford, salmon crimson; Mr. John Penn, salmon pink; Pink Pearl, flesh colored pink; Queen, white; Sappho, white with black spots; Strategist, soft pink, and many more.

Cincinnati wants the S. A. F. for Cincinnati for 1909 the twenty-fifth anniversary, 1909.

The Cincinnati Florists' Society will extend the invitation at Niagara Falls. HORTICULTURE heartily seconds the motion. It is a most appropriate move. Much of the strength and enthusiasm of the early years of the Society of American Florists

was directly due to the inspiration of that first meeting at Cincinnati and the unostentatious hospitality of the Cincinnati florists which was the more notable because they had no predecessors to set the pace for them. By all means let us go to Cincinnati in 1909 and make the event as glorious in history as was that memorable occasion a quarter of a century ago.

By the time these lines come to the eyes of our readers the annual Convention of the Society of American Florists and Ornamental Horticulturists will be but five weeks distant. In every community of any horticultural importance there is a certain number who can be depended upon to attend an S. A. F. Convention and most of these would consider it a grievous privation from a recreative, social or business standpoint if obliged to forego the privilege of being present. But there are others—and it is to be regretted that in some cases these are in the majority—who have not been in the habit of going to these annual gatherings of the craft and have thus far missed the helpful and inspiring influences which their neighbors have learned to prize so highly and it is to these that we would now appeal, with the hope that they will take the step this year, knowing that they will afterwards feel grateful to us for whatever part we may have in inducing them to go. We have never known anyone to complain of the time and expense consequent upon attending an S. A. F. Convention or to express regret for having linked his name to the list of progressive, well-informed men who make up the greater part of the membership of this organization.

## What the Convention offers

Probably never before in the history of any art have the elements of business and pleasure been so happily provided in elastic proportion to fill the requirements of every taste and preference for old and young, sportive or sedate, as in the typical S. A. F. Convention. In the present instance there is no need to more than allude to the manifold majestic and romantic attractions which the meeting place presents. The national Society is particularly fortunate in the selection of Niagara Falls for the Convention of 1908, which, in itself, assures a large attendance. But there are other and stronger reasons than the diversions offered by the world-famous resort which should draw the commercial horticulturist to the Niagara Convention. It is generally accepted that the coming season will see the expected great business revival well under way. The key note of horticulture's part in it will be struck at this meeting. Niagara Falls is very central and the Convention will draw strength and enthusiasm from many sources. A vast trade exhibition is assured at a point so accessibly located and here especially will the business man come in contact with every element representing modern material advancement in all departments of his art and typifying the present-day standards of horticulture. That anyone can remain indifferent to all this and still hope to excel or even hold his own in the horticultural business world seems simply preposterous. Niagara Falls may be seen at any time, but this Convention, considering every circumstance, presents unique opportunities the value of which cannot be over-estimated.

## Primula Kewensis

This beautiful hybrid *Primula* which originated as a cross between *P. floribunda* and *P. verticillata* (the Abyssinian Primrose) is certainly worthy of cultivation and deserving of a place in any collection, even if only from the fact that it possesses yellow flowers, which color is unusual amongst winter flowering *Primulas*.

However, the color of the flowers is not the only charm which the plant possesses; its very habit attracts attention as it stands out erect from amongst a group of other plants and even when isolated it still forms a very beautiful decorative greenhouse plant, as the accompanying photograph will show. It is of perennial character, but does best when grown as an annual.

*Primula Kewensis* is easy of cultivation, certainly as easy as *P. obconica*, and this fact alone ought to make it very popular, which in some gardens it undoubtedly is. Seeds may be sown at almost any time of the year, but if two sowings are made, one in May or June and the second in September or October, these will furnish plants in bloom from Christmas until the end of the following June.

In the greenhouses of the Department of Horticulture at Cornell University are plants which have been in bloom since the middle of March and at the time of writing (June 11) they are still at their best. The seeds were sown about the beginning of last October.

### CULTURE

The method of cultivation is as follows: The seeds should be sown in clean well drained pots or pans (5 inches is a good size), filled with a compost of one part

each of loam, leaf soil, and silver sand passed through a 1-4 in. sieve, and a layer of very fine soil placed on top. The seeds which are very small should be covered lightly with fine soil, a fine sieve being used for this purpose. When the seeds are sown the pans should be soaked in water which will rise by capillary action, this being much better practice where small seeds are concerned, than watering overhead.

It is best to cover the seed pans with a piece of glass and to shade from strong light until germination takes place. When the seedlings are large enough to handle they should be pricked out into larger pans; thence subsequently transferred singly into thumb pots and potted on as requisite into larger pots, until the six inch size is reached, which size is large enough for their requirements, using one part each of loam, leaf soil, and sand during each potting operation, and potting moderately firm.

During the growing period the plants should be placed on shelves 18 inches or so from the roof glass, and the temperature of the house should range if possible, between 50 and 75 degrees F., never allowing a fall or rise beyond these extremes. Care should be taken in watering, as *Primulas* resent stagnant soil moisture.

### FERTILIZING

After the final potting, when the pots are filled with roots an application of Guano or Clay's Fertilizer, an ounce to the gallon of water, twice weekly, will greatly benefit the plants, and the effect will be noticed in the resultant vigor, and deep green color of the foliage.

The plants should be shaded at all times from bright sunlight, and protected from draughts, whilst an occasional spraying with the syringe during dry weather will aid them greatly, but during dull weather spraying must be discontinued or damping of the foliage will result.

If the cultivator pays attention to the few details mentioned above there will be no doubt as to his ultimate success in the cultivation of this most beautiful winter flowering plant.

*H. J. Moore*

## Conservatories of H. J. Heinz, Pittsburg, Pa.

Our frontispiece this week shows the central portion of the ornamental range of U-Bar greenhouses on Mr. H. J. Heinz' beautiful grounds at Pittsburg, Pa.

The circular curvilinear palm house is imposing in its effect, and has an unusual ornamental simplicity.

The passages connecting the palm house to the wings on either side, seem to further emphasize this feature, while carrying the wings far enough away from the palm house to obviate its casting any shade on them, and making excellent fern or propagating houses. Such an arrangement is admirable planning, and although increasing the cost, it is warranted by the additional returns possible.

## THE MOST USEFUL OF THE CATTLEYAS.

A paper read before the Buffalo Florists' Club by George E. McClure, Jr. The first installment of this paper was published in our issue of May 30.

### Potting.

As a rule cattleyas should be repotted every two years, and topdressed every alternate year. The best material for this purpose is orchid peat, osmunda fibre (the roots of the royal fern). It is well to insist on getting young peat from your dealer. It should be of a brownish color. When the peat is old it is very wiry and black and is not suitable. No other potting material is needed for cattleyas. The majority of orchid raisers use a mixture of peat and sphagnum moss, but the moss soon decays and causes the roots to rot, especially when the watering is done in a careless manner. Sphagnum may be used with peat when the latter is very old and wiry. Before using the peat, it should be chopped with an axe or hay cutter. It should not be chopped very fine and the fine particles should not be thrown away, but should be mixed with the rough, open parts of the peat.

Although cattleyas are strictly epiphytic in a state of nature, yet, under cultivation, they grow better in pots than on either blocks or in baskets. Baskets are useful and are preferred by some, but the system of mounting cattleyas on blocks or cork bark is very injurious and will ultimately kill the plants. Mount the plants in half pots, or what are known as azalea pots. Make the hole in the bottom at least twice as large as the potter has made it and cover it with one large crock, no more. The old system of using a high pot and filling it up with small crocks, merely furnishes a safe retreat for cockroaches, snails and woodlice, the principal enemies of cattleyas. Set the stems of the plants well above the rim of the pot, and ram the peat firmly around the roots. Test the firmness of the potting by holding the potted plant up by the leaves. It should not disturb the plant.

The potting should take place just before the new growth commences, and while the roots are fairly dry. After the plants have been potted, water should be withheld for several days in order to allow the injured roots to heal. Water sparingly at first.

In topdressing the plants, remove as much of the old peat as possible without injuring the roots, and work a good coating of finely chopped peat over the surface.

### Fertilizers.

Manurial fertilizers for cattleyas should be studiously avoided, especi-

ally when sphagnum moss has been used with the potting material, as it causes too rapid decomposition with the consequent decay of roots. However, with the system here advocated it is well to use what is known as the "Cookson formula," which is as follows: Three oz. Potassium nitrate; 2 oz. Ammonia phosphate, dissolved in three gallons of water. Use one liquid oz. of this solution in every gallon of water applied. If this fertilizer is used once each week during the growing season, the plants will be much benefitted.

### Enemies.

The chief enemies of cattleyas are insects. The cattleya fly is unquestionably the most injurious of these enemies. It is a small insect and deposits its eggs in the young growths of the cattleya plant. As the growths develop the eggs hatch out and the larvas feed on the developing growth, which is soon arrested and stunted. The fly then emerges and proceeds to deposit eggs in other growths. An abnormal swelling of the young growth is the first indication of the larval presence, and the affected growths must be sacrificed. Latent eyes or buds will start, but will not be as strong as the first growths. The judicious use of hydrocyanic acid gas should control this pest. Next to the cattleya fly, the cock-enemy. They may be destroyed by a mixture of corn meal and Paris green placed on the benches, or between the pots. They may also be trapped in wide-mouthed bottles containing a little sweet oil.

Thrips are also very injurious to the young growths of cattleyas. Their presence is made known by the brownish appearance of the young growths. The trained eye may detect their presence before much damage has been done. The discoloration is the after effect of the injury done. To eradicate thrips, spray with Nicotinic acid or some other tobacco extract. A good plan is to spray the heating pipes with a very strong solution of the same.

Red spider is sometimes bothersome, but it can be kept in check by proper syringing. Snails and woodlice are also injurious but can be trapped with hollowed potatoes set between the pots, or with lettuce or cabbage leaves.

If it is possible to do so, it is well to empty the greenhouse each year for a few days, for the purpose of painting, etc. At this time the house may be fumigated with a double strength of hydrocyanic acid gas to kill all insects. (For instructions in the use of this gas, see Bulletin No. 27, Dept. of Entomology.) If the insects are very troublesome, hydrocyanic acid gas may be used in safe quantities while the plants are in the house.

Cattleyas are sometimes injured by what is known as black spot. This is invariably caused by too much shade, over watering, or by syringing too late in the afternoon. The foliage of the plants should be dry before evening. However syringing should be indulged in every bright day to prevent insects from getting a foothold. Give plenty of ventilation whenever possible and there will be little danger from black spot.

## The Best Kinds for a Succession of Bloom.

By a careful selection of species and varieties, a constant succession of bloom may be maintained. The excellent lasting qualities of the cattleya blooms enable one species to remain in bloom until another begins. The first cattleya of the year to bloom is *C. Trianae*, and its varieties. It is a native of the U. S. of Columbia and is pre-eminently the best in the genus. It has many distinct varieties, which range from pure white to rose purple. *C. Trianae* begins to bloom in early January and lasts until March. *C. Schroederiae*, which resembles *C. Trianae* in size of bloom and habit of growth, is sometimes referred to as a variety of *C. Trianae*. It is lighter in color than *Trianae* and blooms a little later. It is also a native of the U. S. of Columbia and is invaluable as it is the only cattleya obtainable in quantity to succeed *C. Trianae* in time of flowering. It blooms from March of flowering.

The next cattleya of importance in the order of their flowering is *C. Mossiae*, a Venezuelan species, which is in its prime from April to May. It is a very prolific bloomer and for this reason does not last long in cultivation, but with ordinary treatment, it will last long enough to amply repay all care and expenditure.

*C. maxima*, a very distinct plant from Ecuador, blooms at various times during the winter months. Its lilac flowers and lip lined with purple are very freely produced. It is of easy culture and should find a place in every collection.

*C. Mendellii* blooms from the end of April to early June and is an excellent orchid, though seldom offered in quantity.

*C. Warneri*, a fine species from South Brazil, blooms during May and June. This species has been called a geographical form of *C. labiata*, as it is almost identical in color and markings. It differs only in times of flowering, as *C. labiata* blooms in the fall.

*C. citrina*, which also blooms during May and June, is a most distinct cattleya. The flowers are lemon yellow and the crest of the lip is white. It has a strong odor of citron, hence the specific name. The whole plant has a pendant habit and can never be raised any other way. Its foliage and pseudo-bulbs are glaucous. It is a native of the high altitudes of Mexico, and it cannot be raised with a high degree of success unless it is given the shelter of a cool house. The price of this interesting orchid is very low and one or two plants can be raised in the coldest part of the cattleya house during the winter and hung under a tree in a moist place during the summer. In this way

it may be kept in health for several years. The fleshy flowers last a long time and one blossom will perfume an entire greenhouse.

During the months of June and July, a number of fine cattleyas bloom. One of the best of these is *C. Warscewiczii*, and its variety *Sanderiana*, commonly called *C. gigas*. It is a native of Venezuela, and produces more flowers to the spike than any other of the large-lipped cattleyas. The flowers are large and beautifully marked. It is easily recognized by the two yellow eyes or blotches at the base of the labellum. This species should have a very decided period of rest in order to produce flowers in quantity.

*C. Hardyana*, one of the most valuable of the cattleyas, also blooms during June and July. It is a natural hybrid between *C. Warscewiczii* *Sanderiana* and *C. Dowiana aurea*, and is of course found in the same localities as the parents, but in limited quantities, and for this reason and its beauty it is highly prized.

Another fine cattleya which blooms during June and July is *C. Dowiana* and its variety *aurea*. The species is from Costa Rica and the variety is from the U. S. of Columbia and usually blooms a little later than the species. The two forms are very much alike. The petals and sepals are nanken yellow, and the lip is very large, crimson purple and beautifully lined with gold. They are more expensive than most of the cattleyas, but furnish a pleasing break to the prevailing pink and purple shades of the other cattleyas, and may be grown in the coolest part of the East Indian house or possibly in the warmest corner of the cattleya house, as they require a higher temperature than the other cattleyas.

A very fine cattleya of the diphyllous section, from Guatemala, *C. Skinneri*, appears in June and July and sometimes a little earlier. Its purple flowers are produced in great abundance and as the plant is very cheap and beautiful, it is a welcome addition to every collection.

Another cattleya of the two-leaved section blooms during June and July, *C. Schilleriana*. It is a little gem from South Brazil. Its flowers are fleshy and lasting, and are of a dull purple with a little pink in the lip.

*C. Eldorado* is a beautiful Brazilian species and as its name suggests, has considerable yellow in the lip. It blooms during July and August.

One of the cattleyas of the first rank which blooms during August and September is *C. Gaskelliana* and it is from Venezuela. Its petals are narrower than most of the large-flowered cattleyas, but its lip is large and beautiful. It might be called the best summer-flowering cattleya.

During these months, August and September, *C. granulosa* also blooms. It is a Guatemalan species, and is very distinct; its fleshy flowers are characteristic of the two-leaved section to which it belongs. Its lip is very striking, white with small purple papillae. Its sepals and petals are yellowish green and the flowers remain in good condition for over one month.

In the month of October, the well-known *C. Loddigesii* and its variety *Harrisoniana* appear. They are almost alike, belong to the two-leaved class, and are natives of Brazil. Their pink

and white flowers are borne on rather long spikes, and they are among the best of their class.

During the months of October and November, two of the finest cattleyas make their appearance, *C. labiata* and *C. Bowringiana*. These two are found in every collection. *C. labiata* is the type of the labiate or large-lipped group and *C. Bowringiana* might be taken as the type of the two-leaved group, as it is commoner than any other of the small-flowered species.

*C. labiata*, one of the best of the cattleyas, begins to bloom in October and continues during November. It is of easy culture and can be obtained in large quantities at very low prices. It is a native of Brazil, and is sometimes sold under the name of *C. labiata vera* to distinguish it from others of the labiate class of which it is the type.

*C. Bowringiana* also blooms during October and November. It is a native of Honduras and much resembles the Guatemalan species, *C. Skinneri*, already mentioned. Its flowers are rose purple with a lighter throat, and many are produced on each spike. It is perhaps the best of the two-leaved class.

The cattleya house, during the last month of the year is made bright by one of the most beautiful of all cattleyas, *C. Percivalliana*. Its flowers are a little smaller than the other species of the labiate section, but its extremely beautiful lip more than makes up for this slight disadvantage.

Many other fine cattleyas might be mentioned "among the best" but a collection of the above mentioned would give a comprehensive idea of the whole genus, and abundance of satisfaction. If greater variety is desired, forms of the above might be added ad infinitum.

#### How to Purchase.

The best way to purchase cattleyas, if for a large collection, is by the case, just imported. In this way many fine varieties are secured, including the white or albino forms. When only a few plants are wanted, it is best to buy some unestablished plants from reputable dealers, and in this way there is a chance of getting some exceptional varieties. After the plants have once flowered with the dealer, he is able to select the finest forms to sell at high prices to those who are eager to secure the best that the market can afford, and for this reason the unestablished plants are most desirable. The heavy shipments of cattleyas from the tropics, during the past few years and the limitation of the natural supply, will soon cause the prices to advance and as the demand for cattleyas is increasing greatly each year we may expect the price to advance at almost any time. However, there need be no very great concern for the cattleya supply of the future. Cattleyas are being raised from seed extensively in Europe and in this country. The high prices now obtained for hybrids will soon be a thing of the past. They will soon be within the reach of those with a moderate purse. The chief advantage in having a collection of hybrids is that they have no decided period of rest. They bloom more than once each year, and for this reason are cultivated with greater ease.

#### WINTER-FLOWERING SWEET PEAS.

Read before the Gardeners and Florists Club of Boston by Wm. Swan Lee, second installment of this paper was published in our issue of May 9.

#### Cultivation.

To grow the sweet pea to perfection under glass you must have a greenhouse suitable for the purpose. It should be at least eight feet high on the sides, four and a half feet being glass. Mine are seven feet and I find the side rows strike the glass when the vines are about half grown, thereby giving me half a crop. My centre rows are about right, being twelve to fifteen feet high. The higher they grow the more and better flowers you get. We plant the rows five feet apart and in a line with the supports of the greenhouse. The uprights are twelve feet apart, so in supporting we run twine from one support to the other on each side of the row. This I have found the best method of supporting. I have tried wire netting. This is only a nuisance as the vines do not cling to the wire, which causes just as much tying as if it were not there. It also causes frequent injury to the vines as a sweet pea stretches many times more than a foot in developing and if held back by anything in growing the growth looks like a spiral spring, and the picking of the blooms is made very difficult. The side rows are planted five feet from the sides of the house, and all the heating pipes are on the sides. Sweet peas are very susceptible to red spider, and as they will not stand syringing, the further you can afford economically to have them from the pipes the better.

We have not changed the soil in the houses since they were built four or five years ago, and we find the vines are getting more vigorous each year. In the same soil a crop of tomatoes and violets are harvested each year. The soil was originally eighteen inches deep, but by the application of manure each year the depth is now two and a half feet. The tomato crop is on the wane by middle of August. When these are cleaned out we trench the house over as deep as the soil, bringing the bottom soil to the surface. In the bottom of the trench we put three inches of decomposed cow manure, one foot from the surface we put on three inches more of the same material. The house is allowed to remain in this state until nearly time for sowing the seed. The soil is then usually very dry so we dampen it down enough to cling together while the house gets another forking over. This time we go down one foot and mix the top layer of manure with the surface soil. We then make the surface as nearly level as possible and thoroughly water the soil, giving enough to penetrate the entire mass with a strong dose of liquid horse manure. In about three days, depending on the weather, the house will be ready to plant. We sow the seeds about one and a half inches apart. We make the drills one inch deep and do not allow more than one inch of soil over them. We do not pull any soil towards the root as is recommended, but let it remain level. If more soil is pulled around

the base of the plant stem rot is sure to follow. We do not water the plants again until they are up about three inches. Of course, you can grow them on a bench with a few inches of soil but the results will be just what you make them, a weak growth and a crop of short stemmed flowers. These soon play out as there is not enough soil or food for the vines to live on. They may be made to flower any time you wish by increasing the temperature, but the best results are obtained by growing at a temperature just above freezing until the buds can be felt in the crowns of the plants. Then the temperature should be gradually increased, say one degree a night, until you reach 48 degrees. This, I think, is about right although in mid winter I think they move a little better at 50. As the days lengthen a little cooler temperature seems to suit better. A rise of ten to fifteen degrees should be given during the day in sunny weather. In spells of cloudy weather fifty-five is high enough during the day. If a high temperature is given in dark weather the growth gets soft and wilts when the sun comes out bright again. While the plants are young they should be regularly fumigated so that there will not be a sign of lice when they commence to flower. If they are clean at this stage it will not be necessary to fumigate while they are in bloom. It is impossible to sell sweet peas that smell of tobacco. Tobacco also bleaches the flowers of some varieties, and makes them look like some other variety. We sometimes hear of some one having trouble by the buds dropping. This is more the case in midwinter than at any other time and is caused by too cool a temperature or a sudden chill or too much water. Should a house be allowed to go near the freezing point in midwinter the wholesale dropping of buds will be sure to follow. Diseases have not shown themselves with us. Sometimes we see a plant that looks stunted, with yellow streaks in the foliage. This we have attributed to too rich soil or the roots striking manure that was not thoroughly decomposed. They take an abundance of water in the flowering season but require very little in the early stages of growth. They should be provided with proper drainage so that if too much water is given it will settle into the subsoil, and no bad result will follow.

#### Time of Flowering.

I find in experimenting with the newer varieties of peas that some come into bloom ahead of the others. Take reselected Earliest of All and Watchung for instance. These two will come into flower fully two weeks ahead of the other varieties, and for early purposes they are a fine pair to grow together. They are both black-seeded. They will flower in October if sown in August and will be in full crop for Thanksgiving. For a later crop I prefer Christmas Pink and Florence Denzer. These are the peers among sweet peas at the present time. The Denzer is two weeks later than Christmas Pink and is white seeded. It should be sown in sand and transplanted into flowering quarters at the time you sow the seed of Christmas Pink. They will then commence to flower together. There is now quite a

demand for some of the fancy varieties. These sell best in the spring, but will soon get into demand all winter. They are something new and the people are a little skeptical about buying them. They will, however, find a ready sale once there is enough of them around to attract attention. Among the new varieties I think Mrs. Charles Totty the best. It is the same shade as the Countess of Radnor, and is a very strong grower, having two-foot stems. W. W. Smalley comes next. This is a shade of satin pink. It is a fine seller but a trifle short in stem. Mrs. Alexander Wallace is a good one. The color is dark lavender and sells well. Mrs. Wm. Sim sells well; the color is salmon pink; it produces very long stems, many being two feet in length. The improved Mrs. F. Dolansky I have great hopes in. It is the color of an Enchantress carnation. A limited quantity of Le Marquis and Christmas Captain can be sold. Both are purple shades. The same may be said of Blue Bird, also Mrs. Eddy Wild, deep crimson, but the flowers are small in size and the stems rather short. It is a strong grower.

#### A Warning.

To those who are contemplating growing sweet peas the one important thing is to have the right seed. You may get your house in the best possible condition, yet without the right seed failure is sure to follow. Many seedsmen are selling seed of the early varieties, which is not the early varieties. Very few seedsmen know that there is any difference between the two, and substitute with the late varieties. Not a winter passes but what some poor grower gets hit hard in this way. He sows his seeds. They start fine. They grow well, but he gets no flowers. He is paying high for his experience. I will tell you an experience of my own to show what harm can be done in not knowing what you are planting. A few years ago I planted a house with Earliest of All. I bought my seed from a reputable seed house. This turned out to be the best house of peas I had ever sown. The seed was all true and to be sure of seed for the following year I bought again from this same firm with the assurance that it was the same as I had bought the preceding August. My intentions were to build another greenhouse and raise two crops, one for early, the other for late cutting. The house was built and put into the best possible condition. The seed was sown in August and all came up in fine shape. They grew lovely, but somehow or other they did not look right to me. The vines looked too heavy and strong. I, however, did not like to disturb them and I let them grow. The other house was planted the middle of November after a crop of mid-season chrysanthemums. I procured the seed for this house from another source. The beginning of March they commenced to bloom and by the first of April \$2000 worth of peas had been sold from this house. The other house did not commence to flower till beginning of April. The vines had reached the glass and were pulled down several times. It was then deemed advisable to clear the house out and consign the vines to the rub-

bish heap. This was done after keeping the house which was 30x360 at a temperature of 50 all winter long. I was out by this deal \$6000, this being based on the product sold from a house of similar size the year before. I mention this to show the seedsmen what a great injury can be done by selling something that is not true to name, and to the grower to be doubly sure before he risks too much space in something he is in doubt about. The safest way is to procure your seed in advance and test it yourself. Sow some of it, and if the plants grow strong and stocky and bush around the base of the plant you have the wrong sort for winter flowering, but if the plant runs up to a single stem and does not bush you have the right kind. The early types very seldom break near the ground. The one shoot forms practically the whole plant. Some side shoots are made but these never attain the strength of the main shoot.

#### CHRYSANTHEMUMS.

##### Bush Plants for Commercial Uses.

Few varieties grown for cut flowers are suitable for bush chrysanthemums. Through the courtesy of Mr. Frank Oechslin, of Chicago, who grows annually about four thousand bush plants for the Chicago market, we are able to give a list of the varieties he has found most suitable for bush plants for commercial purposes. Mr. Oechslin is well known to be one of Chicago's largest and most successful growers. He now has 56,000 sq. ft. of glass and from 8,000 to 10,000 ft. of frames entirely devoted to plants.

Mr. Oechslin finds that 2-1-2 in. pot plants, if shifted along now and kept pinched back, will make nice plants to sell in 6 in. pots, and 4-1-2 in. pot plants now will make nice 7 and 8 in. pot plants in blooming time. Pinching back of most varieties should be discontinued after August 1. The large flowering sorts should be disbudded to one bud to each branch. The Pom-pom, Anemone and Singles will not need to be disbudded. Good soil should always be used in potting and liquid manure given as soon as buds appear, and be discontinued as soon as buds show color. Below is the list of varieties Mr. Oechslin grows this year:

Large Flowering: Estelle, white, early; Early Snow, white, early; May Foster, white, mid-season; L. Canning, white, late; J. K. Shaw, pink, early; Glory of Pacific, pink, early; Mrs. Perrin, pink, early; Marian Newell, pink, mid-season; Minnie Bailey, pink, mid-season; Amorita, pink, late; October Sunshine, yellow, early; Robert Halliday, yellow, early; Golden Age, mid-season; Walter Molasch, yellow, mid-season; W. H. Lincoln, yellow, very late; Elva, white, early; Nio, white, mid-season; Diana, white, mid-season; Alena, light pink, early; Utan, magenta tipped white, mid-season; Briola, light pink, mid-season; Zenobia, yellow, early; Savannah, yellow, early; Eno, yellow, mid-season; Klondike, yellow, mid-season; Baby Smallestii, yellow, late.

Anemone flowered: Garza, white tipped yellow; Satisfaction, amber and yellow; Enterprise, rose and yellow.

Single: Argentea, white; Ladysmith, pink.

## NEWS OF THE CLUBS AND SOCIETIES.

### AMERICAN ROSE SOCIETY. To Be Strong Financially and a Powerful Factor in Stimulating Natural Beauty.

The motion and resolution adopted at Chicago to fix the time for the official year on July 1st instead of January 1st, places at the head as president, Mr. August F. Poehlmann of Morton Grove, Ill., and as vice-president, Mr. William Kasting of Buffalo, N. Y., where the next annual meeting is to be held. The retiring president, Mr. Robert Simpson of Clifton, N. J., has held office two terms, Mr. Frank R. Pierson and Mr. Philip Breitmeyer being respectively the vice-presidents. The treasurer, Mr. Harry O. May of Summit, N. J., and the secretary, Mr. Benj. Hammond of Fishkill, N. Y., were re-elected. The Executive Committee is as follows: Peter Bisset, Washington, D. C.; Patrick Welch, Boston, Mass.; E. G. Hill, Richmond, Ind.; Adolph Farenwald, Roslyn, Pa.; J. J. Curran, Salem, Pa.; P. J. Lynch, West Grove, Pa.; Philip Breitmeyer, Detroit, Mich.

During President Simpson's term it has been the determined effort to put the American Rose Society on a solid financial foundation; the invested permanent fund has reached \$2950.00, with another \$50.00 in sight. For the past two years the secretary has waived compensation. The annual shows cost considerable outlay and on June 10th a meeting was held at Bronx Park, when the treasurer's accounts were audited; this was done so as to bring up to date all and every outstanding liability. Heretofore, when

a new set of officers has come in there has been a series of bills to be paid. In order to place the American Rose Society clear and above board at the beginning of its new financial year, J. A. Valentine of Denver, Colo., placed in the hands of the secretary the sum of \$20.00. There was an offer made practically to wipe out the whole overlapping indebtedness, and the result as advised in two executive meetings was to write a letter to a number of rose cultivators requesting a contribution of \$10.00. These letters were sent out the last of June and responses have been coming, so that without being a burden or tax on any few members, the American Rose Society proposes to start out in its westward move clear handed. I am assured that the exhibition of the past spring at the Art Institute in Chicago was the richest exhibit of the rose ever shown in America. The Spring Exhibition should be made a great public show for the people of Buffalo. The next meeting as a matter of general convenience will be held at Niagara Falls during the S. A. F. Convention, when the formal transfer of office will take place from Mr. Simpson to President August F. Poehlmann. The Bulletin of 1908 is being prepared. There have come requests for this Bulletin from societies and libraries far and wide. The show in June in Bronx Park had from John H. Troy of New Rochelle a variety of choice flowers, W. A. Manda of South Orange, N. J., and Frank R. Pierson put up a whole side table of peonies. One word from the dictionary describes them properly, that is, Magnificent. Crimson Ramblers this year are in evidence to an extent never before witnessed, in all sorts of places from the mansion to the humblest cottage, from railroad station to the back yards of small tenements, one of the glories of nature's beauties.

BENJAMIN HAMMOND, Sec'y.  
Fishkill-on-Hudson, N. Y., July 4, '08.

### FLORISTS' CLUB OF PHILADELPHIA.

The sweltering weather kept many away from the July meeting of this club, held on the 7th inst. Nevertheless, a fairly good crowd was in attendance to enjoy the lecture on gladioli by Arthur Cowee of Berlin, N. Y. This was illustrated by 108 stereopticon views and proved very enjoyable and instructive. The color work in the pictures was the most artistic and beautiful ever seen here. Convention matters were discussed and committees were appointed on transportation (Jno. Westcott, chairman) and hotels (S. S. Skidelsky, chairman). It is said the rate from New York is \$11.67 for 100 or more, and that \$14.80 is the Philadelphia figure, but no doubt this latter can be improved on. Among out-of-town visitors were E. A. Seidewitz, of Baltimore; Messrs. Lynch and Pyle, of West Grove, and Wm. Paul Binder, of Pittsburg.

### FLORISTS' CLUB OF WASHINGTON.

The regular monthly meeting of the Florists' Club of Washington will be held at the greenhouses of the president at Anacostia. A personal letter from him to each member accompanied the secretary's notice requesting them to be present. Many matters of importance will come up, viz., the chrysanthemum show, the convention at Niagara, and the annual outing. A full report will follow in next week's issue.

### AMERICAN CARNATION SOCIETY. Carnation Registered.

By Bassett & Washburn, Hinsdale, Ill. "Orland P. Bassett." Parentage, Crane and Prosperity, color deep red; size of flower 3-4 to 3-5 inches; calyx long and never splits; stems strong, stiff and long. Very strong grower, every shoot producing a flower.

ALBERT M. HERR.

### NEW YORK FLORISTS' CLUB.

OUTING AT WITZEL'S POINT GROVE.

# A VISIT TO THE PEONY FARM OF J. F. ROSENFELD, WEST POINT, NEBRASKA.

This gentleman has probably the largest and finest collection of peonies in America, if not in the world. He is a peony specialist and knows how to keep them strong and healthy. He has deep, rich, well drained sandy loam. The ground is sloping to carry off the rain, for it will not do for peonies to have wet feet. He has found it will not do to plant peonies after peonies until the ground has had rest, nor will it do to manure heavily. After clearing the land, he sows a crop of oats, and as I saw them, there was a tremendous growth. This he plows under in June and lets it rot, then in September he plows very deep and the ground is ready for peonies again. He often puts some coarse manure on the fall-planted ones. He thinks there is no harm in this as the manure does not come in contact with the roots and the rains feed them liquid manure which is safe.

He has been raising seedling peonies for about twenty years. Out of thousands he selects the very best. The plat is carefully laid out and each plant is numbered, a record is kept of their blooming qualities, those that produce flowers annually are noted and the intermittent ones rejected. Perhaps, under this close scrutiny, nine-tenths will be rejected from the first careful selection. The five points of excellence must be met: 1st, robustness of the plant and readiness to propagate; 2d, annual bloomer regardless of frosts; 3d, fragrance; 4th, large, full, symmetrical flower; 5th, good keeping qualities.

As I looked over his charts, I was impressed with his patience and conscientious regard for his customers and for the future of his creations. It is very important to have a peony that will multiply readily. J. Descaine is a beautiful flower, but it is very brittle in the root and with me it takes four years to double itself, while Baroness Schroeder will easily double every year and I have cut four good roots from one in a single season. So this is cheaper at \$5 than the other at twenty-five cents. A peony that is an intermittent bloomer, though of equal beauty, is not worth half price. I have had some of Kelway's best and have had to wait five years for a blossom. That don't pay. Years ago, Mr. Rosenfield found a late pink with flowers of exquisite beauty. I bought half of it and mine never bloomed. His were such intermittent bloomers they have been utterly discarded. One trouble with European propagators is they put their favorites on the market too soon. It is a fact that young peonies are inclined to wobble till they are established. Many of Terry's seedlings vary widely in color from the descriptions first given. Among my seedlings one year I found one of marvelous beauty—one of the most charming variegated flowers I ever saw. A press representative saw it and said: "Now, let me name this." He called it Exquisite. I planted a strong stake beside it with the name on it. Next year the stake was there and the same plant but no Exquisite. That identical plant had the impudence to throw up a tall stem with a worthless single flower. I wait-

ed for years for Exquisite to come back but she never came. Another time I found one of the most magnificent flowers in the whole collection. It was an immense compact bloom of violaceous, vivid, deep red. It was a splendor. I marked it. The next year it had an inferior bloom and for five years it has not bloomed at all. Now, if on the first blooming I had commenced propagating, what a disappointment my customers would have! I am convinced that right here is where the trouble lies with our French and English growers. They rush things on the market before they have been fully tested.

Mr. Rosenfield is so conservative and exacting that he has selected only eight out of thousands, in twenty years. His Golden Harvest and Floral Treasure are well known. They went immediately to the front. Delicatissima and Floral Treasure are much alike. The latter may be a seedling of the former but it was born years after. Mr. Rosenfield never had a Delicatissima on his place till long after Floral Treasure was born. Again, Golden Harvest and Jeanne d'Arc resemble each other when there are forty years difference in their birth. They do look alike, but they are not the same. A row of Jeanne d'Arc planted last fall did not produce a flower. A row of Golden Harvest of much smaller roots, planted the same time, was covered with fine blooms and they always bloom. A good many years ago, Mr. Rosenfield secured some of the choicest seed from an eastern grower and it is probable that among them were seeds of those two varieties which nearly reproduced themselves, and though they look alike it is only a family resemblance. They are not the same as you will find by planting side by side and watching them year by year. Golden Harvest is the most continuous bloomer under adverse circumstances that ever was born. One year, for forty-eight hours, when nearly ready to bloom, it was wrapped up with a heavy coat of sleet and it seemed as if the whole plant would die. When it thawed out, it looked sick, pale and wilted, and I said, "No blooms this year." But not many days after, the whole plant was covered with a mantle of exquisite beauty. Now, a plant like that is worth having. I give a description of six new candidates for popular favor.

Karl Rosenfield.—This proved to be the grandest among seven hundred varieties. Large flowers are often coarse, but this is a glory—a ball of glistening velvety crimson. Most of this color are tardy or shy bloomers. This blooms on the least provocation the first year, and all the years. It is quite early and very fragrant, scoring the five points of excellence. Ak-sar-ben.—Nebraska spelled backwards. Crimson maroon. Grace D. Bryan.—Large pink; very double and fragrant; very late. Crimson Victory.—Forty-five inches tall, an annual, bountiful bloomer, fragrant; very fine in bud and resplendent in bloom. Prairie Splendor.—Majestic dark pink, deliciously perfumed, very vigorous and a good multiplier. Prairie King.—A sure late bloomer, flower deep, violaceous red, fragrant.

Some years ago Mr. Rosenfield bought one hundred and twenty-five

varieties from an English concern for which he paid \$130 besides freight and duty. He finds not over ten of them of any real merit and all the rest must be put on the cheap list or be discarded altogether. Here are some of the peculiar methods of this firm. He did not order any Festiva Maxima and yet they were sent in the place of four other varieties. He gave no order for Andre Laues, the old late rose. He had thousands growing himself, and in three instances these were put in the place of high-priced ones. See pages 41 and 52 of peony manual, 2d edition.

I think he has one hundred and fifty varieties from Dessert of France. While he considers him a conscientious and careful propagator, he finds only about one-half of his worthy of attention. He has put too many on the market. He thinks that ultimately, we will come down to about seventy-five varieties. It surely is better to patronize home-grown that have been carefully tested rather than bring in those of doubtful merit and run the risk of importing that terrible fungoid disease which hangs like death to the plant.

C. S. HARRISON.

York, Nebr.

## THE CULTIVATION OF GLADIOLI.

(Read before the Philadelphia Florists' Club, July 7, 1908, by Arthur Cowee.)

It is with much pleasure and a high appreciation of the honor at being requested to address you this evening upon a subject, which in spite of other business cares and responsibilities has been uppermost in my ambition and desire to excel, that is, the cultivation of gladioli.

### Qualities of the Modern Gladiolus.

Doubtless some, if not all, of you are familiar with the exceptionally rapid development of this flower during the past ten years or so. Especially do I refer to the artistic forms and coloring of enormous flowers properly arranged on a gracefully bending spike. The time was not long ago when practically the only gladiolus bulbs commercially offered were of one type, the Gandavensis, with stiff, straight spikes, comparatively small flowers arranged closely together, all of the buds developing at about the same time. The variety of colors also was limited and it is no wonder to me that except for massive decorations the average florist has been slow to take up the growing of this flower.

To such hybridizers as Groff and Lemoine are we indebted for the many types of beautiful and artistic flowers which have been recently introduced and upon which (although it may seem impossible) improvement is constantly being made: these modern hybrids which from their cheapness and adaptability to any kind of decoration, either large or small, are yearly tempting more and more the artistic, critical and exacting florist. I do not wish to appear in the light of condemning the entire Gandavensis family. Such is not my intention, for among the hosts of named varieties of this class are many which I value highly on account of some particular attribute or attributes which render it invaluable for certain purposes. For instance, I have found the varieties Shakespeare, May, Augusta and Brenchleyensis the

most reliable for forcing purposes one year with another. With a succession of plantings also, this type can be used with splendid results en masse on extensive lawns, where the contrast in colors is most pleasing.

As my task has been principally in the direction of collecting, selecting, classifying and growing commercially this bulb, my talk will be more on this line rather than from the scientific or hybridizer's standpoint, although I have had considerable experience with hybridizing in my early work. Ever since I knew anything about flowers the gladiolus has been my favorite, the growing of which I called a fad up to a few years ago, when, realizing the possibilities of the development and consequent demand for these modern types I concluded it possible to make a business of the growing of these bulbs, convinced also that the soil and climatic conditions of my section of the country were especially adapted to the development of a strong, vigorous bulb which in the gardens of the amateurs and professional growers would give most satisfactory results. How well I have succeeded is indicated by the harvest of 1907 of about 16,000 bushels of bulbs, bulbets and cormels, all of which stock has been disposed of during the season of 1908-1909 with the exception of such as we were obliged to retain for further growing. This stock is made up of selections from unnamed seedlings and named varieties placed in mixtures and color sections, also named varieties of recent introduction as well as novelties not yet introduced and of course some old varieties which by reason of some particular attributes are still in demand, are retained.

#### Origin of the Gladiolus.

Comparing the wild species with the modern hybrids one could hardly believe that the latter were offsprings of the former. Of the wild species referred to there have so far been discovered 110 or more, a few being natives of Europe and Western Asia, a few from the mountains of tropical Africa; most of them, however, are from South Africa (Cape Colony and Natal). The leading parents of garden sorts are the species *Psittacinus*, *Cardinalis*, *Sandersii*, *Purpureo-Auratus*, *Papilio*, *Dracocephalus*, *Cooperii*, *Adlami* and *Cruentus*. But few of them are of value to the garden and then only as curiosities. In addition to the use of wild species many domesticated species have been produced which have been of incalculable value in securing new types and colors, as well as the general habits and constitution are concerned.

The gladiolus is quite an old flower, for we find as far back as 1596 *Gladiolus segatum* was cultivated, and in 1629 *Gladiolus Byzantinus* was quite popular; also during the last half of the eighteenth century many species were introduced, causing a great deal of interest in this flower. At one time *Gladiolus segatum* and *communis* were highly prized for their medicinal properties, but for what ailment I have been unable to ascertain. The starchy bulbs of some African species were also used by the natives as food. In 1823 Mr. Colvill of Chelsea brought to notice the variety *Colvillii*, a cross between *cardinalis* and *tristis*, and which by later breeding has shown some beautiful hybrids especially adapted for early forcing, although the

flower is quite small. It seems, however, to have been left to Van Houtte to start the ball rolling, when in 1811 he introduced to the trade the *Gandavensis* type, said by some authorities to be a cross between *psittacinus* and *cardinalis*, while others claim it is the result of crossing *psittacinus* and *oppositiflorus*. I am inclined to the former theory, although in some so-called *canadavensis* hybrids the blood of *oppositiflorus* is recognized, especially is it most prominent in that old variety *Ceres*.

The *Lemoinei* type, a hybrid of *purpureo-auratus* and *Gandavensis*, was first introduced in 1878 by Victor Lemoine, and the *Nanceianus*, a hybrid of *Lemoinei* and *Sandersii*, was introduced in 1889 by the same hybridizer. About this time or perhaps a little earlier, a cross between *Gandavensis* and *Sandersii* was obtained by Max Leichtlin of Germany, which strain came to America and was named *Childsi*.

About the year 1887 I happened to see a small planting of gladioli in the garden of a personal friend, which, comparing quality, vitality and multiplying functions were a revelation to me. I found upon inquiring that they were hybrids from the trial grounds of Mr. H. H. Groff of Canada and immediately I made it my business to stock up as rapidly as possible from that source, so that today I have between 15 and 20,000 seedlings of exceptional merit, the result of crosses made by that hybridizer.

#### Cultural Methods.

The methods employed in the successful cultivation of the gladiolus are too well known to all of you for me to go into full details hence I will touch lightly upon this subject. One of the principal points is to select proper soil, for although this bulb will bloom in most any kind of soil and under adverse conditions, still the same as most flowers it has its choice of soils. Sandy loam is preferable, but if this cannot be supplied, heavy soil may be much lightened by the application of sand. The soil also should be well drained, for the gladiolus will not thrive well where there is excessive moisture. The soil should be well fertilized in the fall and thoroughly plowed, and again in the spring should be well pulverized, at which time the lightening process with sand should take place if required. The planting can be made in rows or en masse, according to the uses which are to be made of the flowers. If space is limited the rows may be as close as eighteen inches (18 inches) apart; such planting, of course, is intended for cut flowers.

Four inches (4 in.) is shallow enough to plant in any soil for the bulb to take strong root and permit of sufficient space for the new bulb or bulbs to form on top of the one planted. By planting this depth and even a little deeper in especially light soil, the spike from the old corm to the top of the ground is a help toward supporting the mass of flowers which are sure to follow proper cultivation and as a general rule no stakes are required except under extreme conditions, such as continued high winds sometimes accompanied by driving rains.

#### Propagation.

Gladioli bulbs may be carried through the winter year after year in

good condition, if stored in a dry place, with as low a temperature as possible above the freezing point.

The multiplication of the same variety is accomplished in two ways, first, by division, the old bulb producing from two to as high as ten new blooming bulbs. Second, by offsets or cormels which are formed among the roots between the old bulb planted and the new bulb or bulbs, which form on top. A large percentage of these cormels require two years' planting in order to secure blooming bulbs, and the first year may be sowed in rows one inch (1 in.) deep and about twelve inches (12 in.) apart. New varieties are secured only from seed, and there is no argument which would convince the modern grower that chance seedlings (by bees, butterflies and other insects) are as good as those produced by hand hybridization, especially when hybridized by one whose experience and knowledge of the habits and constitution of the parent plants as well as the proper methods to secure color results, has taught him when and how to make such crosses. Sports now and then appear in my fields, but so far, I have been unable to establish and reproduce them.

#### Decorative Value of the Gladiolus.

The blooming of the gladiolus coming as it does at the time of the year when there is comparatively a dearth of other flowers is a boon to the florists. With its new forms and coloring there is no decoration for which it is not eminently adapted and the absence of perfume as well as the odor from decomposition, which takes place with many other flowers, place it in the lead for table decoration. Beautiful and artistic wedding, funeral and other designs can be made with the individual flowers while the spikes can be arranged with green foliage in sprays, and other forms lasting much better than roses, carnations, in fact any other flower, which by reason of such use must remain some time without water.

No florist whether growing for the general or local market should neglect to force each year at least a few gladioli. Very few are so fortunate as to have their carnation houses entirely free from stem rot and consequent bare spaces, in which the gladiolus may be planted with excellent results and returning ordinarily a reasonable profit for the space occupied. Then, too, there are other house crops among which are *chrysanthemums* which can be economically and profitably followed by the planting of gladioli. The temperature in which the best results can be secured is that under which the carnation thrives. Bulbs after being harvested from the fields in the fall should be given a reasonable resting period after which they may be planted in the bench midway between the surface and bottom of the soil; sufficient root depth is thereby given and the necessity of staking is also avoided.

The gladiolus is well called the people's flower and I hope by careful selection and combination of those varieties best adapted to the use of the craft, that the day will not be distant when it will be a necessary asset to florists in general and the time receive the additional title of the Florist's Flower.

# RECEIVER'S SALE OF THE ENTIRE STOCK OF DECORATIVE MATERIAL

Of THE WILLIAM GRAHAM CO., Incorporated  
Comprising Electric Fixtures, Furniture, Flags, Bunting, Scenery, Pottery,  
Jardinieres, Vases, Etc.

ON EXHIBITION—Monday and Tuesday, July 13th and 14th.  
TERMS—Cash—25 per cent. Deposit required at time of sale.

### Obituary

#### Edward W. Hitchings.

Edward W. Hitchings, of New York City, died at Pasadena, Cal., on June 12, aged 50 years. Mr. Hitchings has suffered for many years with lung trouble and his death was caused by this. The Hitchings business was established in 1844 by Anthony E. Hitchings and was carried on by the family until 1890 when the corporation of Hitchings & Co. was formed for carrying on the business of erecting and heating greenhouses, with E. W. Hitchings as president, a position which Mr. Hitchings held until his death, although his active participation in the business lasted only till 1895 when his health broke down and he was obliged to seek a milder climate. One daughter is left, Mr. Hitchings' wife having died five years ago. The body was brought east for interment.

#### James Cole, Sr.

James Cole, Sr., who has been in the florist business in Peoria, Ill., since 1863, passed away on June 30, at the age of 87. Mr. Cole was a native of England and came to the States in 1857, settling first in Chicago.

#### Robert Boeck.

Robert Boeck, a florist of Cincinnati, O., while walking on some boards that covered an old cistern in his greenhouse, fell through and was drowned.

#### THE LATE GEORGE T. SAMBROOK.

We present herewith the portrait of the late Geo. T. Sambrook which was received too late to appear with the obituary notes which we gave in our last issue. Mr. Sambrook retired from

GEORGE T. SAMBROOK

business four years ago and gave the establishment at Troy, N. Y., to his two sons, George T., Jr., and John E., who now conduct the business under the name of Sambrook Bros.

#### BUSINESS CHANGES.

C. E. Adams has purchased the Washington Avenue Greenhouses, Racine, Wis., and will make improvements.

## ROSES--GRAFTED

#### FINE STOCK, READY NOW

Killarney, Carnot, Kaiserin Augusta Victoria, Uncle John, from 2 1/2 in. pots, \$2.00 per dozen; \$15.00 per 100; from 3 in. pots, \$2.50 per dozen, \$18.00 per 100.

Killarney, Carnot, Kaiserin and Uncle John, from 3 1/2 in. pots, \$1.00 per dozen, \$20.00 per 100.

The Bride, Bridesmaid, Golden Gate, from 2 1/2 in. pots, \$2.00 per dozen, \$12.00 per 100; from 3 in. pots, \$2.50 per dozen; \$15.00 per 100; 3 1/2 inch pots, \$3.00 per dozen, \$17.00 per 100.

#### OWN ROOTS

Killarney, Kaiserin, from 3 in. pots, \$1.50 per dozen, \$9.00 per 100.

Richmond, Sunrise, from 3 in. pots, \$7.00 per 100.

Bride, Bridesmaid, Golden Gate, from 3 in. pots, \$7.00 per 100; \$60.00 per 1000.

## CHRYSANTHEMUMS

Autumn Glory, Ada Spaulding, Col. D. Appleton, Cullingfordii, Dr. Enguehard, Dorothy Devens, Geo. Kalb, Harry May, H. W. Rieman, Jennie Nonin, J. E. Lager, J. H. Troy, Mrs. H. Robinson, Meta, Miss Minnie Wanamaker, Miss Alice Byron, Major Bonnaiffon, Nagoya, Robt. Halliday, Soleil D'Octobre, Timothy Eaton, Mrs. Robt. McArthur, Wm. Duckham, F. A. Cobbold, Pink Ivory. Price from 2 1/2 in. pots, \$3.00 per 100; \$25.00 per 1000.

## CANNAS

Strong plants from 3 1/2 in. pots—30 fine named varieties, \$6.00 and \$8.00 per 100.

**WOOD BROTHERS, FISHKILL, N. Y.**

# LILIUM HARRISII

We offer a selected stock of the original true Harrisii for early forcing. These bulbs have been grown from the original pure Harrisii, and will be found to be splendid stock for early forcing, for which purpose Harrisii is so valuable. We have had the stock inspected, and are assured that it is almost absolutely pure and almost entirely free from disease. This is not stock picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered, both in regard to freedom from disease and purity, and not the late type now so often furnished.

Lilium Harrisii has been deteriorating slowly for years, and in order to get back to the true type of the original Harrisii, we have had our stock grown from the original pure stock, and it will be found very superior to the Lilium Harrisii usually offered. While the stock is A No. 1, our prices are as low as, or lower than, the prices asked for indifferent stock.

We have only a limited quantity of this stock to offer, so it will be advisable to place order without delay in order to ensure securing this stock. Bulbs ready for delivery middle to last of July.

6-7 in. bulbs, 350 to the case, \$6.00 per 100, \$50.00 per 1000  
7-9 in. bulbs, 200 to the case, 9.00 per 100, 80.00 per 1000  
9-11 in. bulbs, 100 to the case, 18.00 per 100, 170.00 per 1000 { Full Case Lots at Thousand Rates

**FREESIA REFRACTA ALBA** Bermuda-grown, finest selected bulbs, 1 1/2-in. up, \$1 per 100, \$7.50 per 1000.  
French-grown, Mammoth size, 3 1/2-in. up, \$1.50 per 100, \$12 per 1000.

**F. R. PIERSON CO., Tarrytown-on-Hudson, New York**

## OUTDOOR GROWING OF LILY OF THE VALLEY.

Editor of HORTICULTURE:

I have a piece of ground 15x12 feet which is suitable for lily of the valley. Will you kindly let me know through your valuable columns how many pips it would take to plant the above space and how far apart to put the pips? Would you recommend pips or clumps, and when would you advise planting?

A SUBSCRIBER.

Editor of HORTICULTURE:

In reply to your inquiry about growing lily of the valley I will say that in order to get the best results the pips should be planted in the fall of the year. First manure the ground liberally and then plant one-year-old pips two inches apart in rows which are twelve inches apart so as to be able to keep them free from weeds. In order to keep the extreme sun from the ground it is advisable to give the plants a light mulching until they are thoroughly rooted.

From these young pips you will get no flowers during the first two years but from the third year on you will get flowers every year unless the plants are disturbed. If flowers are wanted the first year, then plant "clumps" because they contain all ages of growth, but these will flower poorly until established. I might also mention that in order to get a nice white flower the plants will have to be planted or protected from the sun so as to get a half shade.

The German lily of the valley produces the larger flower whereas the Dutch lily of the valley has smaller bells but more of them than the German variety has.

W. H. SIEBRECHT.

## TRAINING THE CATALPA.

Editor HORTICULTURE:

I have recently taken charge of a place on which there are a number of Catalpa trees about six to eight feet in height and which at one time had an umbrella-shaped head. It is desirable to restore them to their original form as quickly as possible. Now, will some of your readers please tell me how this can be done without the

loss of much foliage as they are in a rather conspicuous position. And how are such trees kept in this umbrella-like form, at the same time retaining their ornamental appearance as far as possible?

SUBSCRIBER.

The Catalpa is one of the easiest trees to train because it is a rapid grower and produces its flowers on the young shoots. If it is desired to restore the trees at once to the umbrella-shape the new growths should be tied down, but we would advise waiting until spring, then cut the leaders right out and when they make the second growth pinch them back leaving the side shoots and letting them spread out as in training chrysanthemums. The centre shoots should always be pinched out because the sap runs to them more rapidly, and for the first two or three years they will require particular attention. By cutting severely you can easily get the desired shape in a year or two.

## FERN SEEDLINGS

Eight of the best varieties in fine condition, now ready. \$1.00 per 100; \$8.50 per 1000. If by mail add 10 cents for postage.

**Assorted Ferns for Jardinieres**, bushy plants, \$3.00 per 100; \$25.00 per 1000; \$200 at 1000 rate

**Adiantum Cuneatum**, 2 1/4 in., \$3.00 per 100; \$5.00 per 1000.

**ANGLO-AMERICAN SPAWN COMPANY**  
 Kennett Square, Pa.

## Seed Trade

In the matter of attendance and importance of the subjects discussed the seedsmen's convention ranked well up with any of its predecessors. In the main, the address of President Green, which we published last week, should commend itself to all thoughtful seedsmen, and undoubtedly it will. As to Mr. Green's view that as some legislation affecting the seedsmen is inevitable, it is unwise for the American Seed Trade Association to oppose all legislation, but that it would be wiser to co-operate in the framing of a consistent, logical and reasonable bill capable of enforcement and of serving the best interests of the trade, there seems to be very little ground for two opinions, and only those persons who are desirous of using questionable methods in their business will oppose legislation of the character named. While the address of the president was able, it however dealt with the matter at issue from the grass seedsmen's standpoint, rather than from that of the general seed merchant, and it seems to be up to some one representing one of the leading seed houses to present their side of the question, and it is to be hoped that the right person will come forward at the proper time.

In ordering goods please add "I saw it in HORTICULTURE."

## Of Interest to Retail Florists.

The great national holiday marks the beginning of our dull season and from now on we have plenty of time to examine our looks and become thoroughly familiar with bad accounts. I do not mean so much those bad ones which we consider as dead beats generally but those which we have contracted ourselves and the results of which show a lot of undesirable merchandise now lying dusty and broken on shelves or augmenting the rubbish pile in the far corner of the lot and making very expensive soil. There is more money lost in bad purchases than in bad sales. During these following two months of peace we may take out our note book and consider

the jottings made therein during the busy season. The improvements we thought about during Christmas or Easter can now be reconsidered and such preparations made as will lead to the final execution and make the same possible in just a few minutes.

There are many things which cause enormous expenses during the holidays just because we have neglected to prepare in time. A well planned delivery system as against the haphazard use of messengers may save you \$50.00 just for one Christmas. Proper room to store plants to be sold several days ahead for holiday delivery will save many a dollar as also does a perfect system of booking your orders.

### WE HAVE PREPARED FOR YOUR NEEDS

with a stock of desirable and useful **Summer Specialties**, unequalled in quality and extent anywhere on this continent and at prices that cannot be beaten. Orders by mail or telegraph will be filled immediately. Catalogue on application. Write for special offer on some new and tempting business getters that we have just received.

**H. BAYERSDORFER & CO., 1129 Arch St., Philadelphia**

how many dollars you lose by careless booking of orders? How many orders are marked paid instead of charged; how many orders to be charged are filled but forgotten to be booked?

How about your freight bills? Are the charges of the express company always according to schedule? Is it not possible to reduce your incoming freight account? Was the result of your advertising equal to the expense? If not why not? Many an item that can be cited of which it is well to think now that we have plenty of time for thinking.

Now is the time of the year when profits dwindle so low that they are in many cases not sufficient to pay the expenses and we are thankful to fall back on our reserve. Following the above indicated preparations will find us in a much better financial condition to meet the same dull season one year hence.

FRANK DANZER.

#### NEW RETAIL FLOWER STORES.

Julius W. Eger, 511 Union street, Schenectady, N. Y.

#### NEWS NOTES.

Mrs. Marston B. Bunker has taken the active control of her late husband's business, 8 City Hall avenue, Boston.

A barn belonging to the Sherman Nursery Co., Charles City, Ia., was struck by lightning on June 27, and completely destroyed. The loss, which includes horses, etc., is estimated at \$8000. The building will be immediately replaced.

July 8.—Murdock McNeil, 22, employed as a gardener by President Eliot of Harvard at Northeast Harbor, Me., was drowned last night while bathing alone. It is supposed he was attacked by cramps. He was last employed at Cambridge, Mass.—Boston Post.

#### INCORPORATED.

The North Floral Co., Fort Dodge, Iowa; Otto Hansen, president; J. H. Schaffner, vice-president; E. E. Nordwall, secretary-treasurer; capital, \$10,000.

The Lohrman Seed Co., of Detroit, Mich., has incorporated with a capital stock of \$10,000.00. The officers are: President, Chas. Lohrman; vice-president, Philip Breitmeyer; secretary, Ed. Beilel; treasurer, Harry Breitmeyer.

#### PERSONAL.

Fred. H. Weber passed through Philadelphia on the 6th inst. en route for Europe.

Paul C. Schultz and bride, of Vincennes, Ind., have been spending a week in Chicago.

Visitors in New York: H. H. Battles, Philadelphia, Pa.; Benj. Dorrance, Doranceton, Pa.

A. J. Stahelin, Greenfield, Mich., narrowly escaped serious injury in an encounter with an automobile this week.

Visitors in Boston: Leonard Barron, New York; John Gibson, Newport, R. I.; John M. Cannon and wife, Webster Groves, Mo.

Alonzo J. Bryan and Miss Anna B. Babcock, both of Washington, D. C., were married on June 25. Honey-mooned at New York.

John Sinner, of the Chicago Cut Flower Exchange, is taking a week's vacation among the various summer resorts of Wisconsin.

Charles Robinson and Joseph Margolis, both of the firm of H. M. Robinson & Co., Boston, start for Peaks Island, Me., Monday, for a month's stay.

C. W. Stuart, of the firm of C. W. Stuart & Co., Newark, N. Y., while driving on June 25 was struck by a runaway team and thrown out, breaking two ribs and his collar bone.

A. B. Cartledge, Philadelphia, has just returned from a ten-day yachting trip. The objective point was the Poughkeepsie races and the route by way of the Delaware river and through the Raritan canal and around to the Hudson.

William R. Finlay, of Dorchester, Mass., and Miss Alice M. Moring, were married on June 21. They will visit New York, Chicago and spend a few weeks in Maine before returning to their home at Stoughton where they will receive their friends after September 1.

Visitors in Chicago: D. O. Connell, of the Stuppy Floral Co., St. Joseph, Mo.; Joseph Boek and Son, Burlington, Iowa; Mr. Aldous, of Aldous & Son, Iowa City, Iowa; F. C. Crab, Grand

Rapids, Mich.; H. M. Burt, Battle Creek, Mich.; J. A. Peterson, Cincinnati, O.; Theodore Meyer, Waukegan, Ill.

On Sunday evening Fred Gall, a florist in the employ of H. P. Gerhardt, of Wilmette, Ill., fell from a window at 1028 Lincoln avenue, Chicago, and fractured his skull. His recovery is doubtful. Mr. Gall formerly had a flower store in Washington, D. C., and had been in Chicago but a few weeks.

#### IN AND ABOUT DETROIT.

H. Glenn Fleming, of Fairmont, W. Va., is taking a two weeks' treatment in Mt. Clemens, using this sojourn also to call on Detroit florists.

Fred Fruck, of Berry's at Grosse Point, has left for a three months' trip to Europe, his principal object being the healing waters of Carlsbad.

Mr. Pierce, of the Detroit Cut Flower Exchange, has taken Miss Walsh as his life's partner. Miss Walsh is the daughter of an old German gardener and nurseryman and sister of Mrs. Taepke and Mrs. Flammer, both prominent local florists.

You will find something worth reading on every page of HORTICULTURE.

## FLOWER MARKET REPORTS

## During Recess

**BOSTON** "V" spells the condition of the market this week. Everything is at a standstill, and while flowers of all descriptions are plentiful the excessive heat of the last few days has wilted the stock to such an extent that it is hardly worth its keeping.

Trade was decidedly on the quiet side up to Friday the past week, but livened up considerably on Saturday, when a fairly good cleaning up was had, save on roses of the ordinary quality, which have been too plentiful. The severe hot weather is showing its effect on Bridesmaids, Bride, Killarney and Richmond, which are very small and hardly saleable, while those that are not cut tight are full blown and again unsaleable. Kaiserin, Carnot and La Detroit are in fine quality and sell readily. Carnations still plentiful enough, while some growers are beginning to throw out and get ready for replanting. Other stock such as lilies, sweet peas, lily of the valley, etc., are in good supply. Asters have made their appearance, but are of short stem and poor quality.

Early closing and vacations are in order, and the trade is looking to a good rest for a few weeks.

A most refreshing rain **CHICAGO** brought relief to Chicago during the last week of June and market conditions improved somewhat. There is still an over-supply of flowers. Good stock moves though not with the regularity so much to be desired, but cheap stock positively will not move at any price. Sweet peas are good in quality but sell at low figures. Some fine *Lilium auratum* is in and brings one dollar fifty per dozen. Carnations are nearly out of the market showing the hot weather badly. Roses are holding their own fairly well and asters are just beginning to arrive.

Stock is plentiful and of good quality. **INDIANAPOLIS** Carnations are remarkably good for July but decreasing daily in quality. Brides and Bridesmaids are small but good color. American Beauty is the best rose on the market today. The old crop runs largely to long stems, while the young stock is better in quality but short of

stem. Abundance of lilies of all kinds are to be had. Outside sweet peas are somewhat of a failure owing to continued dry weather.

**NEW YORK** Disturbed only by the torrid weather and the persistency of the shippers who, in defiance of weather conditions and dead market, continue to send tons of unsalable stock to the wholesale houses, the quiet of mid-summer broods over the floral community. Stock of every description is being received daily at the wholesale markets, a large part of which is fit only for the garbage wagon. The most natural question is, why don't the growers throw it away themselves and thus save heavy express charges, but that's a question nobody can answer. Really good stock in either roses or carnations is not in evidence to any extent but it is not needed for any present purpose and so no inconvenience is caused. The first asters, now appearing here and there, are of unusual quality for the early crop and give promise of a splendid showing of this most useful of summer flowers later on. Sweet peas are everywhere, quality and variety all that could be wished for. Lilies are selling lower this summer than ever before.

In the early morning there is a little business but it is soon over. The weather for the past six weeks has been unusually dry and warm, and many stocks, especially sweet peas, are at present in poor shape. On the whole, however, the situation is not much different from other seasons the first week of July. American Beauty roses are the best selling item on the market. The best ones come from a distance being larger and better than the locals. Richmonds are poor at present. Some good northern-grown Killarneys are coming in. Brides and Bridesmaids are pretty miserable stock. Good carnations sell, but the good ones are mighty few. Orchids clean right up. Lily of the valley is moving better and gladioli are finding a ready market. Easter lilies are fairly plentiful. Stocks of the less important items are far too plentiful and much of it goes to waste.

The Michigan Cut Flower Exchange and the Detroit Cut Flower Supply House crossed bats at Belle Isle, Mich., on July 10.

The Greek Retail Florists' and Growers' Association, of New York, will hold their annual picnic and games at Witzel's Point Grove, on July 16.

Arrangements are practically all completed for the Chicago florists' picnic at Merton Grove, July 19. The program is in charge of J. Zeck, who has arranged for a variety of games with prizes. Tickets for adults are \$1.00, and when presented the owner will receive a coupon worth fifty cents which may be exchanged for refreshments. All florist and horticultural clubs are invited to join with the Chicago Florists' Club in their annual picnic.

### PHILADELPHIA RECREATIONS.

Seven, four—favor of Burton team. was the result of the game of base ball between employees of George Burton and the Leo Niessen Co., July 4th. The Niessen men have asked for and been granted a return game some Saturday afternoon. George Burton was the host of the occasion and entertained all present players and spectators—royally.

The June try-out of the Florists' Club bowlers has resulted in the following list of ten with an average of 150 or over from which to select the team of five and a "sub" for the convention: Robertson 184.9, Bodis 179.4, Adelberger 179.2, Connor 175.7, Yates 174.14, Kift 168.11, Graham 167.2, Harris 166.61, Westcott 166.11, Batchellor 163.34. One at-home and four outside games will decide the final make-up.

### PICNICS IN PROSPECT.

Florists' Club, Columbus, O., July 15, at Buckeye Lake.

Florists' Club, Chicago, July 19, at Morton Grove, Ill.

Florists' Club, St. Louis, Mo., July 15, at Normandie Grove.

Gardeners' and Florists' Club of Boston, Pine Banks, Jamaica Plain, July 16.

## BRINGS PRODUCER AND BUYER TOGETHER.

"This spring I wanted some stock that  
did not prove easy to get. After vain at-  
tempts in New Jersey and elsewhere one  
day a sample copy of HORTICULTURE  
came to hand and, lo! in it I saw advertised  
just what I wanted, within 20 miles  
of home. To do the square thing I think  
my dollar ought to go forward. Here's  
your dollar." Yours,  
Rhode Island. E. A. CHIPMAN.

## GREENHOUSE HEATING

From The Weekly Florists' Review, Dec. 20, 1906.

### A HEATING RECORD

I have two houses, each 24 x 100, in which I grow lettuce and general stock. I keep a night temperature 50 to 52 degrees. They are heated with hot water. I had a special boiler made to order that has proved itself beyond my expectations. In the winter of 1905-6 I used thirty-one tons of coal at \$1.75 and ten cords of foot wood worth about \$2.00 per cord. This I thought very reasonable. The circulation is perfect. Last winter in moderate weather, that is, not windy and outside temperature 20 degrees or so above zero, I would leave the boiler nine hours with a variation of but 2 degrees.

Ten days ago I was called to Cleveland over night. The outside temperature was 40 degrees at 2:45 p. m., when I left the boiler, with a gradually sinking mercury. There being no men about, I left instructions that the boiler should not be touched until next morning. My wife, on my return next evening, reported that at 4 p. m. it became quite windy and by 7:30 was freezing, with stormy outlook. When she awoke at 6 a. m., the outside temperature was 20 degrees, and the greenhouses were 47 degrees. I think this is a record for **fifteen hours and twenty minutes without attention.** I would like to hear from anyone who can beat it.

C. S. LESCH, Garretttsville, Ohio.

### Why My New Curved Iceless Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars incased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: Result, the driest roof ever used for greenhouse purposes.
- 4th. **THE MOST IMPORTANT OF THEM ALL.** The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

**William H. Lutton,** Horticultural Architect and Builder  
West Side Ave Station (C.R.R. of N.J.) Jersey City, N.J.

### The Advance Ventilating Apparatus

"Your machine is the best we have ever used" is what an Ohio florist writes us in remitting for his machine. It is not good only in one part but it is the best in all parts—the results of experience, of careful study, of mechanical construction, best material and backed by moderate prices that makes our line so popular. Give us a trial.

**The Advance Co.**  
RICHMOND, IND.

## KEEPING BOILER SET UP EXPENSE DOWN

The Burnham Cast Iron Sectional Boiler needs no derrick to set it up; the boiler shed does not have to be torn out, because section by section the Burnham can be passed through the ordinary door or down a stairway. No costly "bricking in" is necessary as the boiler and base are complete in themselves. No expensive labor is required as the set-up is so simple and the directions we send with each boiler are so plain that your own men will have no trouble in doing the work.

Then, when set up, you have a *cast iron boiler* made especially for greenhouse work — the boiler that's grown up in the business — the boiler that burns any kind of fuel. Burnhams are made in 83 sizes.

SEND FOR NEW BOILER CATALOG.

## Notes from the Arnold Arboretum

Among the handsomest shrubs blooming in mid-summer *Aesculus parviflora* (*A. macrostachya*) is to be classed; it is the latest of all the Buckeyes to flower and is now covered with its slender cylindric spikes of white slightly fragrant flowers furnished with long protruding stamens which give the whole inflorescence a light and graceful appearance. The spikes, often more than a foot in length, are borne well above the bright green foliage and remain in bloom for several weeks, as the flowers expand gradually from the base upwards. The dwarf Buckeye is an excellent shrub for borders of shrubberies or for planting as single clumps on the lawn, as it assumes when standing alone a regular dome-shaped habit, the lowest branches almost horizontal and meeting the greensward and the central stems growing upright. Though a native of the southern Alleghannies it is perfectly hardy in the neighborhood of Boston.

Another southern shrub hardy in this section of the country, but rarely seen in gardens is *Stuartia pentagyna*; it bears white cup-shaped flowers from two to three inches in diameter with prettily fringed petals, but as the flowers are not produced very freely and are sometimes partly hidden by the foliage, they are not as effective as one would imagine from the size of the flowers. It is interesting as being besides the Japanese *S. Pseudo-Camellia* the only representative hardy in our climate of the subtropical Tea-family.

Several species of St. Johns-wort are now showing their golden yellow flowers; the largest flowers of all, measuring two inches in diameter, has *Hypericum aureum*, while *H. prolificum* has somewhat smaller and *H. Kalmianum* still smaller flowers; the smallest only about one-half inch in diameter, has *H. densiflorum*, but they are arranged in larger and dense clusters to make up for their smaller size. These shrubs rarely exceed three feet in height and are well suited for borders of shrubberies which they will brighten up during late summer with their golden flowers; they prefer light and sandy soil and grow well in partial shade.

Another shrub now in bloom with yellow flowers is the well-known native *Potentilla fruticosa*. There is also a closely allied white-flowered species, *P. davurica*, but it does not flower very freely and one rarely sees it in good shape; it usually looks more or less ragged. A hybrid between the two species, *P. Fridrichsenii*, resembles much *P. fruticosa*, but has paler flowers and a somewhat more spreading habit.

*Sorbaria Aitchisonii* (*S. angustifolia*) is certainly much more graceful and handsomer than the old *S. sorbifolia* and equals in beauty the tender *S. Lindleyana*. It is a shrub attaining six feet in height or more, of

rather loose and open habit with graceful light green foliage and the usually red colored stems topped by ample and lax panicles of white flowers. It is, however, not perfectly hardy here, but if partly killed in more severe winters, it sprouts again vigorously from the base.

A shrub of about the same hardiness is *Vitex incisa*, the hardiest species of the genus; it is a graceful shrub with finely cut foliage and large and lax panicles of lilac flowers.

The trailing *Rosa Wichuraiana* follows in time of flowering the Prairie-Rose and is now very beautiful with its clusters of large white flowers and its glossy dark green foliage. It is well suited for trellis-work as a climber and for covering rocky and gravelly banks.

As one of the most showy of the late flowering climbing shrubs the Trumpet Vine, *Tecoma radicans*, is to be mentioned, which is now beginning to expand its large trumpet-shaped orange and scarlet flowers borne at the end of nodding or pendulous branchlets. It is excellent for covering rocks and walls to which it fastens itself by means of aerial rootlets or it may be allowed to climb into trees, as it usually does in its natural state. *Tecoma hybrida*, a hybrid between *T. radicans* and *T. chinensis*, does not climb high, but usually forms a spreading shrub with arching branches in the manner of the Blackberries, its flowers are borne in larger panicles and are shorter and wider; it is sometimes cultivated under the name *T. radicans grandiflora atropurpurea*.

Among the late flowering Honeysuckles *Lonicera Heckrottii* and *L. plantierensis fuchsoides* may be named as some of the best. The former is similar to *L. Caprifolium* or *L. Periclymenum*, but more free-flowering, though without fragrance; the two-lipped flowers are pink and yellowish. The second resembles *L. sempervirens*, but the scarlet flowers are slightly two-lipped and appear in greater profusion. Both are supposed hybrids of garden origin; the first between *L. sempervirens* and *L. italica* and the second between *L. sempervirens* and *L. hirsuta*.

A native shrub rarely seen in gardens and parks, but very handsome in its fruiting state is the Mountain Holly, *Nemopanthes mucronata* (*N. fascicularis*); its dull crimson fruits have about the size of a pea and are hanging on slender stalks from the branches between the pale green foliage which turns yellow in fall. Like other Hollies it is polygamo-dioecious and care must be taken to select fertile shrubs for planting to enjoy the ornamental fruits.

*Alfred Rehder.*

## THE CONVENTION NUMBER

Will be Issued August 15, 1908.

**T**HIS Annual Special Issue of Horticulture has proved to be a good business getter. It is circulated freely at the S. A. F. Convention and is also distributed by mail to a large number of new addresses. Open the fall season with a special advertisement. S. A. F. business is worth having.

### The waning of Bridesmaid

The past year has shown a big change in the relative standing of the Bridesmaid in the rose markets. In some quarters this once peerless variety has been almost abandoned and in others where it is still grown in quantity its largest sale has been through the street traders, at prices so low that it is not surprising that those who have been growing it heretofore are

disposed to cast around for something more remunerative. Killarney in the meantime has bounded ahead and large as was the quantity of this variety grown last year, the crop of the coming season will be far in excess. Whether the substitution of the latter for Bridesmaid as the leading pink commercial rose is to be permanent or merely transitory remains to be seen. It is not at all likely that any one rose will ever again hold the position of exclusive pre-eminence for so long a time as Bridesmaid has. The production of new roses as an occupation is now well started in this country and we shall have new claimants for popular favor in constantly increasing ratio from now on. On the advancement made in the essential qualities will depend much the ultimate fate of Bridesmaid and Killarney as well. But having once become used to a wider choice of varieties it is not to be expected that the flower buying public will henceforth be disposed to limit their favor to any one, two or three sorts as they have in the past.

### A garden empire

To the majority of HORTICULTURE's readers the cover illustration which we present this week will seem a very long distance view. We of the extreme East have very little conception of the vast horticultural resources which are being developed with astounding rapidity in the far-away western sections of our great country. The fruit industry of California long ago outstripped in value that State's product of gold. The State of Washington is rapidly developing on similar lines and encouraging the development with a munificence that is bound to make the whole world "sit up and take notice." Our columns this week tell of the great apple show at Spokane for which plans are now being made, where upwards of \$25,000 in premiums are to be distributed and an apple of solid gold given for the most beautiful specimen apple. At the present moment a "Cherry Fair" of great magnitude is in progress in the neighboring State of Oregon. All over the great Northwest are hybridizers at work trying to evolve hardier, more vigorous and more luscious fruits, inspired by the same spirit that animated the Wilders, Mannings and Hoveys in the days of the shaping of New England horticulture. Across the continent New England sends greetings and good cheer to the horticulturists of the Pacific slopes who are turning hundreds of thousands of acres of splendid land into a garden empire such as the world has never known.

### A square deal for the wild birds

We find in our agricultural exchanges frequent communications from their readers on the bird problem, some farmers and the majority of the small-fruit growers in certain states, where fruit growing is an important industry, having no patience with the efforts being made by nature lovers, humanitarians and the advocates of the birds as insect destroyers, and telling pathetic stories of the wholesale destruction of the product of their labors by the feathered tribe. The fruit farmer has, undoubtedly, much to provoke him and it is only natural that he should feel resentful under such aggravation, but the birds must be protected, for the dire results of the depletion of insect-eating birds are now too well proven and it is not likely that the public will tolerate any further slaughter such as has been going on heretofore. There is one remedy against the bird onslaughts on cultivated fruit which we think has not thus far been given proper attention, that is, the planting of wild fruiting trees and shrubs, selecting those sorts that ripen simultaneously with the cultivated crops. Much has been writ-

ten in advocacy of bright fruiting shrubbery for ornament but there is this other reason for their planting which is well worth considering. Provide wild cherries and such things in abundance in the hedge rows, by the roadside and in other spare places and we believe much of the cause for complaint will have been removed.

## Roses Under Glass

CARRYING ROSE PLANTS OVER

It is often more profitable and convenient to carry a house of roses over a second season than to replant with young stock, particularly if, for any reason, we find that we cannot replant until late in the season.

To be successful, this process requires careful preparation and intelligent handling. Plants in table benches, where conditions relative to root action are readily controlled, may be ripened in about ten days, but where the plants are in solid beds or benches it is advisable to begin early as the work of ripening the wood requires a longer period.

Begin by gradually withholding water from the roots and allowing the soil to become moderately dry before giving another supply. After five or six days of this treatment the plants will get all the water they require from the syringe which must be kept going in order to keep down red-spider, which must not be allowed to increase, as the full complement of leaves is required to complete the ripening process.

The soil must not be allowed to become so dry as to cause the young wood to wilt or the plants to shed their leaves. It will often be necessary to touch up those places which, being exposed to the direct rays of the sun, or from other causes, show a tendency to bake. Air must be given freely, both night and day, as it is an important factor in hastening the ripening. It requires about three weeks to properly ripen plants in solid benches. As soon as the plants are sufficiently ripe they should be carefully pruned, removing all the dead and very weak wood and cutting back the strong shoots to five or six eyes, and just tipping the very young shoots. If the plants are to occupy the same benches remove as much of the old soil as can safely be done without injury to the roots, then give an application of bone meal, and fill up with a good rich mixture of soil and manure.

The work of transplanting old stock entails a deal of labor, and, unless every precaution is taken to insure its being carried forward as expeditiously as possible, does not always prove successful. It is well, before attempting to remove the plants from the benches, to give the soil a good watering to render it plastic, so that a good-sized ball may be taken with each plant. Each plant should be encircled by a piece of string or raffia and all the shoots drawn rather closely together; by this means it will be possible to convey them to their destination without leaving half of them hanging to projections along the wayside, also it will greatly facilitate handling by the men engaged in planting.

As soon as a bench is planted it should be well watered and sprayed and in very bright weather the spraying should be done every half hour, for the first two days. In fact it is sometimes necessary to spray thus frequently for five or six days, using an exceedingly fine nozzle so as to get as little water to the roots as possible.

## About Iris

Iris means "Rainbow" and that means all the colors there are. Twenty years ago, in our Queens catalogue I prefaced our Iris section thus: "The orchids of open air gardens are the Irises. If there are any more beautifully illustrative of form, more cheaply obtainable, more easily cultivated, more continuous in flowering than is the Iris that family has not yet come under our observation." This 10th of June, 1908, I would not change a single line.

We know it takes time to start again old-fashioned things, peonies, and phloxes and delphiniums for instance, reference to which I hope to take up later, and now the Iris begins to shimmer in the limelight, so much so that it may be expected to be one of our next first numbers. This Iris family should have more told of it than there is time and space at my disposal today.

Some good every day German Irises are Sapho, violet and deep purple, early, distinct; three or four kinds travel for Sapho; fifteen or twenty kinds carry this name. Augustina, yellow and maroon. Eugene Sue, white and purple. Gertrude, violet blue, new and distinct. Gracchus, yellow and brown crimson. Celeste, pale blue, sweet as a gardenia. Jaacquesiana, maroon, bronze and crimson. Sans Souci, gold and mahogany, a gem. Judith, purple, sulphur and violet. Duchesse de Gerolstein (Harlequin Milanais), white, flaked and reticulated, a fine old variety. Dalmatica, lavender, tall; this has about twenty names. Madame Chereau, a gem amongst gems; pure white, cerulean blue and Tyrian purple, so beautiful and yet not young; has many names,—twenty or more. Fairy (?), white with violet veiling. Darius, yellow, purple shading to cream. Ulysee, bronze, purple and gold and drab. Speciosa (catalogue), lavender and dark purple, large grower. Sir Walter Scott, yellow, brown and rich crimson. King Henry, deeply colored, crimson, purple and yellow. Leopold 1st, amaranth, yellow and smoky bronze. Peterson Harlequin Milnais is the glorious old Duchesse de Gerolstein.

The Iris man, after he has become acquainted with the preceding varieties will be looking for more and more, providing always that there is accommodation for the same. Everybody should have Florentina, with all the grace, beauty and expression of everything charming; colors, are white, lavender, green, brown and yellow. I know that this old dear thing is carrying twenty names; some of them are Chameleon, Peacock, Iridesence, Multicolor, Western Glow, and the glorious old favorite has stood its ground since 1596 and it is the same Florentina. Chamoeris Olbiensis, purple, white and gold, dwarf, flowers in April. Guldenstadtiana, white and gold, tall, June. Iberica, purple and lilac and coffee color, May and June. Laevigata (Kaempferii), the Japan Iris; the 4th of July banner flower, one hundred distinct kinds. Pumila, dwarf, purple, blue and white, April. Siberica in various colors, tall and graceful, May and June.

Another class of Irises is the Xiphions, including *alata*, *caucasica*, *filifolia*, *Histrio*, *junceae*, *persica*, *reticulata*, *tingitana*, *vulgare* and *xiphioides*. This section of Xiphions have bulbous roots and they are rather more delicate than the ordinary above-ground rooters.

Somebody some day will write a popular Iris book.

JOHN THORPE.

*J. E. Simpson*

*John Thorpe*

## Greenwood Plantation

So much has been written of the many beautiful places located in the north, that it was a most pleasant experience in early March, to leave the snow and ice behind, and in twenty-four hours being transported to a land of flowers, birds, and sunshine.

About 200 miles west of Savannah, lies Thomasville, Ga., and here it was my pleasure to visit Greenwood Plantation, a truly southern estate.

The approach leads through the pine woods and, while yet some distance away, the several tall pines just inside the beautiful iron entrance gates, can be seen standing like sentinels against the sky, but upon entering, the attention is rivetted upon the masses of color along the drive, some two hundred feet back, produced by massing Indian azaleas, single varieties, in large patches of one color. Here several thousand plants have been used from pure white to fiery red, through all the intermediate shades of color, and the magnificent result beggars description.

Large beds of cacti and the tall *Yucca aloifolia* looked handsome along the borders of the drive, while young trees of the native *Magnolia grandiflora* recently planted, gave promise of a future beautiful avenue of this state-ly evergreen.

Through trees laden with blossoms, and grand specimens of live oak, with English ivy hanging in festoons from the trees, and across a formal rose garden filled with the choicest roses, could be seen the house, with its pillars covered with Cherokee roses, and set in a garden of the fairest flowers. Blue single violets filled the air with their delightful fragrance, and many varieties of narcissus and hyacinths filled the flower beds, while large bushes of camellias fifteen to twenty feet in height and as much in diameter, *Gardenia florida* nearly as large, *Magnolia Soulangeana* and *M. Alexandrina*, the double flowering *Prunus persica* in white and pink, *Exochorda grandiflora*, *Cercis canadense*, and *Wistarias* covering several large trees, whose beauty no extravagant description could possibly exaggerate, formed a setting truly marvellous. Many beautiful native palms formed grand specimens on the intensely green

Bed of *Yucca aloifolia*.

lawns, while *Cycas revoluta*, several planted together, made a unique bell. *Berberis japonica* crowned with large clusters of its metallic colored berries, *Aucuba laurels*, green and variegated, extremely well berried and the large leaved English laurel, were happily grouped, giving character and beauty to the individual plants. Large bushes of the sweet olive, *Olea fragrans*, filled the air with its sweetness, and carried on the warm breezes, the whole vicinity seemed filled with its subtle enchanting fragrance. The ligustrums here are evergreen and make fine, natural specimens, and when trimmed into shape take the place of baytrees.

A sunken terrace with fountains and marble figures, mar to some extent the natural features of this beautiful place, but when tastefully planted it will eventually become attractive. At one end of this terrace still hangs the old bell, which formerly called the slave to labor, a relic of the past, but a forcible reminder of the changed conditions which exist today, where kindness of heart prompts every action, and the comfort of every employe is an important factor in the quiet contentment so apparent on every

hand. Side by side with the old bell floats the Stars and Stripes, and the only one I saw in Georgia.

A drive through the plantation with its miles of neatly kept roads and bridle paths was indeed a pleasure. The yellow jasmine, *Gelsemium sempervirens*, covered the tree tops and every available support with its garlands of golden yellow fragrant flowers, forming the most graceful arches and bowers such as nature only can produce, and the floral effects were indeed surpassingly beautiful.

The tall pines are a feature of this place, as here are to be found some of the finest specimens of the long needle pine in southern Georgia; the saw-mill has been kept away, and every tree is considered almost a personal friend. Raising their bare trunks seventy-five feet or more in the air, with a diameter of three to four feet at the base, stand these magnificent monarchs, their beautiful green heads, waving and shining in the sunlight, and sighing in the breeze, are recollections which cling to one's memory. Underneath these tall pines the ground is almost covered with palmettos, which grows everywhere in abundance.

The baby pines of a beautiful, refreshing green color, are found scattered between trees of mature growth, or assembled in colonies, the nurseries of future giants. Here and there in the more thickly wooded parts, the vegetation becomes more varied. Here we find a splendid example of the evergreen *Magnolia grandiflora* fifty to seventy-five feet high, its bright green leaves shining in the sun; these are quite numerous, and when in bloom must be a beautiful sight with their large white fragrant blossoms. *Cercis canadensis* is quite common through the woods, betraying its presence with its deep, pink blossoms, while bushes of the white hawthorn flower in close proximity, the contrast making a delightful picture. Large clumps and many beautiful isolated plants of the wild azalea with its gloriously pink sheets of dogwood in all its purity, by its very abundance, was a sight one blossoms, growing in all its natural beauty amid surroundings calculated to enhance its magnificence, and white could never forget; its memory lingers

Greenwood, Front View.

and my visit will ever be a sweet recollection.

The walled vegetable garden of about four acres contained abundant supplies of the choicest vegetables, with every modern convenience for producing the best, and the model farm with its modern conveniences up-to-date machinery, fine stock and good buildings, neat and cleanly in every detail, was a feature which surpassed many of the finest show places in the north. This beautiful place is owned by Col. O. H. Payne, of New York.

A. J. LOVELESS.

Lenox, Mass.

#### SOME NOTABLE NOVELTIES AT A LONDON SHOW.

At the R. H. S. exhibition in Vincent Square on June 23, special certificates were offered for novelties but purely new things were few and these mostly confined to orchids and stove plants.

*Eremurus Elwesianus* is a very fine hybrid, having immense spikes of deep salmon flowers with conspicuous bead like centres. It is extra vigorous, and hardier than its parents.

Veitch & Son put up a basket of a good double golden *Begonia* "Col. Lausedat" which took an A. M. The firm also had plants of *Gloxinia* X *Gesnera*, but not of great merit or utility, *Kalanchoe flammea* and *Kewensis*, and cannas of quite new shades.

House-grown sweet peas were shown, the finest scarlet to date being probably "The King" (Dobbie) not yet sent out. G. Mount showed the new hybrid tea rose "Joseph Lowe"; it is very fine. Godfrey had decorative *Pelargoniums* *Devon Lass* and *H. S. Davey*, two most striking.

T. Ware had *Delphinium* "Pole Star" a good and free white and Yvette Guilbert a lovely double silver grey. Paul put up several boxes of the new hybrid sweet briar "Refulgence" which received A. M. and the same award fell to roses *Hugo Rollen*, (*Marie van Houtte* X *Homere*), which should prove useful. *Spirea* *Peach blossom* was shown by several growers; it is the best of the soft rose colored sort and took a gold medal. Cutbush & Son also showed the baby rambler *W. H. Cutbush*, of doubtful merit or utility. H. Cannell showed two boxes of good roses but on the moss in the old style, which will not do, now that the Americans have shown us how to grow fine flowers on yard-long stems.

THOMAS BUNYARD.

#### A SONG FOR JULY.

'Tis the noon of the year,  
As a toiler, oppressed  
By the labor and heat,  
Folds his hands on his breast,  
Drawing strength from his dreams,  
Lo! the earth swings at rest  
In the noon of the year.

'Tis the noon of the year,  
Ere it pass to its wane,  
Over full-blossomed trees,  
Over yellowing grain,  
Earth, the toiler, adrowse,  
Must revive him again  
In the noon of the year.

'Tis the noon of the year,  
Come, be one with it, sweet!  
Love in idleness calls  
Through the languorous heat,  
Where the dream poppies nod  
In the wind-wimpled wheat,  
In the noon of the year.

T. A. Daly, in *Catholic Standard and Times*

#### AN AZORES LILY FIELD.

Our illustration shows one of the lily fields at Lagoa. The crop this year is not believed to be very large owing to much dry weather. The last rain that we know of was the 17th of April. This grower writes, however, that next year he will probably grow many lilies at Ribeira Grande, a small village on the island, because the grounds there may be irrigated. Most of the lilies are now grown at Lagoa, but it is very difficult to irrigate the land there because there

is not sufficient water and it is necessary to carry it to the fields.

Mr. R. M. Ward, to whom we are indebted for the photograph, informs us that shipments are expected a little later this season than usual because the direct steamers to New York have mostly been removed from service during the hot weather, and the Boston White Star Line does not get freight enough to make the Azores a port of call. The goods therefore will likely have to be shipped either via Liverpool or via Lisbon.

Very fine nerines and agapanthus are also grown in the Azores.

#### BERMUDA AND JAPAN LILY BULB PROSPECTS.

Advice from Bermuda says that the *Harrisii* crop is quite a failure and deliveries are being made in 7-9 at about 50 per cent. basis, whereas 9-11's only about 10 per cent. Dry weather is given as the cause—bulbs after digging prove 4-5 instead of 7-9 as expected.

We also have just received word from Yokohama that the so-called "Formosa" lily, grown in Oshima, will be about 50 per cent. delivered. The first lot was shipped from Yokohama on *Empress of Japan* on the 13th of June. This is very early and we can only hope the bulbs are ripe enough to be planted. In fact, it is much earlier than they are needed. *Formosas* arriving here a month later we believe will be better.

The shortage of *Harrisii*, Azores and *Formosas*, and the probable shortage of *Giganteum* will certainly bring the *Multiflorum* back into favor by force. The *Multiflorum* are said to be improved this year and much better selected.

Cold storage lilies have apparently "caught on" and are already a big item in the bulb business. A. T. Bodington disposed of 40 cases last week.

#### PRIMULA OBCONICA OUTDOORS.

A correspondent inquires whether any reader of *HORTICULTURE* has had experience with *P. obconica* as a summer bedding plant. No one appears to have tried it in this country but the following taken from "The Garden," London, may throw some light on the subject:

"Having read in your 'Answers to Correspondents' for June 20 a note on planting *Primula obconica* out of doors, it may interest you to hear that in the spring of 1906 I planted out in a border facing north two of these plants which had been flowering indoors. This was done experimentally, and I do not expect them to live through the winter, but both plants survived the winter of 1906-7, and when I was last at home I noticed that one of them was not only alive, but making fair growth and showing bloom. The position was fairly sheltered, but more exposed to a north-east wind than any other. The garden I am speaking of is that of Overbury Hall, Layham, Suffolk, and stands on rising ground exposed to the east and south, but is fairly sheltered by trees.

T. H. DIPNALL.

#### A USEFUL INSTRUMENT.

One of the most useful instruments at the disposal of those who have any levelling or laying out of land to be done for any purpose is the Bostrom Farm level advertised in another column in this paper. Every time a new house is contemplated this excellent substitute for expensive surveying instruments will come in useful. The cost is within the reach of all.

## A Famous Avenue

After the Storm.

The complete destruction of the magnificent avenue of lime trees on King Edward's Sandringham estate, about which a short note appeared in an issue of HORTICULTURE last spring, removes what is probably the most famous and widely known avenue of trees in Great Britain. Every year thousands of people are attracted to this beautiful, picturesque corner of East Anglia to see the magnificent oaks which abound in the deer park, and also to see the more interesting memorial trees of which there are several hundred planted on the lawns and driveways throughout the estate.

There are three avenues at Sandringham, all more or less interesting to the visitor. First we may see the Princess' Drive, a beautiful avenue winding through some fine woodland. We then come to the more modern Coronation avenue, which is close upon two miles long. It is interesting to know that the entire cost of making and planting this avenue was defrayed by the farmers and tenants on the estate, who wished to show in this useful way the esteem in which they held their "Royal Landlord." At the commencement of this avenue we notice that some of the young oaks were planted by King Edward, Queen Alexandra, the Prince and Princess of Wales, the King and Queen of Norway, the King of Greece, the German Emperor, the late King of Portugal and many other crowned men and women.

In these few notes, however, it is hard with the main driveway, or Norwich Avenue, that I would deal. It is indeed hard to believe that those venerable trees, which had weathered the storms and gales of centuries, were completely wrecked in the brief space of two minutes. Yet it is so. The various lines are no more as a glance at the accompanying photograph will show. No more will the trees pay homage to their representative state, if yet we may say, but while its beauties are but a memory its name is immortal.

During the time of the Saxons, it

appears that most of the land in the vicinity of Sandringham belonged to the bishops of East Anglia, and even at the present day we may see some fine old oaks in the pleasure grounds and in the great deer park which were planted by these owners. History also tells us that a residence existed on the present Sandringham site during the stirring lifetime of William de Albini and Walter de Montalt, and it is quite possible that many of the fine trees, which grace the Royal estate today were planted by those gentlemen.

Before the Storm.

Since these early days, however, the estate has changed hands many times.

In the year 1832 it was bought by the present King of England, and ever since has been his home, in the truest meaning of the word. We know the King to be a most enthusiastic gardener, a sincere admirer of the beautiful in nature and in art, and the loss of these noble trees must have been a matter of considerable regret to him. We may take it for granted that in the near future a new avenue will be made and fresh trees planted. Let

us hope that they may live, and flourish.

"Yes, while on earth a thousand discords ring,  
Mans' fatal upstart mingling with his foil,  
Still do thy sleepless ministers move on,  
Their glorious tasks in silence performing,  
Still working, blanning still our vain tur-  
moll  
Laborers that shall not fail when man is  
gone."

WM. McM. BROWN.

North Easton, Mass.

## AN APPLE OF GOLD.

Paris awarded a fruit of pure Hesperian gold to Venus as the fairest of the Olympian divinities gathered at the bridal of Pelens and Thetis, and this so inflamed the jealousies of Juno and Minerva that they did not cease their machinations until Troy was destroyed.

The National Apple Show Association of Spokane, of which Harry J. Neely is secretary and manager, purposes awarding an apple, molded of virgin gold, dug out of the hills in the Spokane country, to the grower showing the most beautiful specimen of fruit at its first annual exhibition in Spokane, Dec. 7 to 12; but instead of bringing about discord, as it is recorded followed the judgment of Paris in disposing of Eris' gift, it is designed that the award of the 20th century shall be the means of placing the apple in its rightful classification—as the emperor of all fruits.

Modern history contains no reference to a similar award and for this reason, in addition to the intrinsic value of the trophy, it is believed the announcement of a prize of a golden apple will be the means of bringing to the Spokane show the best specimens of the skill of the foremost growers, not only in America but from various parts of Europe, as well as buyers from the Orient and the Islands and other countries.

National attention is already directed to the festival next December, and the inquiries from eastern, middle-western, southern and Pacific coast states and from the various provinces in the Dominion of Canada, so far received by Mr. Neely, indicate that already preparations are being made by growers in numerous districts to compete in practically every class, ranging from the best single apple to car-load lots.

The prize list, yet in the preliminary state of its preparation, will be the largest and most comprehensive offered anywhere in this or any other country in the world. Not less than 10 tracts of land, and at least \$25,000 will be offered in premiums.

## "RESULTS."

Here is the story briefly told by an advertiser who offered geraniums and chrysanthemums in Buyers' Directory, July 11th issue of HORTICULTURE.

Somersworth, N. H.

"Results; goods sold. Thank you."  
G. S. RAMSBURG."

## "GOOD SATISFACTION."

Northboro, Mass., July 14, 1908.

"Your" publication has given good satisfaction. Shall use your columns again soon with advertisement. Many an issue is worth more than the year's subscription.  
J. L. MOORE.

## AQUATICS AT RIVERTON.

The use of aquatics in general gardening has been rapidly extending during the past decade. The general impression used to be that most of the rarer and showiest of the family were hard to cultivate and many of them far too tender for our northern latitudes, but thanks to the efforts of firms like Dreer's and the better class of horticultural papers, a fuller knowledge of them is now widely disseminated.

A recent visit to Riverton emphasized the truth of this, as here can be seen in the ponds out-of-doors almost every known species of value, every one of them grown without artificial heat, except the Victorias, which are given about a month at the start. Given sunshine, water and plenty of rich soil, there are few classes of plants that will bloom so freely and continuously during the whole season as the aquatics. Under cultural practice in northern latitudes the family is divided into two classes, hardy and tender. The hardy varieties are treated the same as the native water lily (*Nymphae odorata*). The tender ones are grown indoors in pots or tubs until the water is warm outside, their after cultivation being the same as for the hardy sorts.

In the hardy group premier place is taken by the *nelumbiums*. These are perfectly hardy in the northern states and can be grown under the same conditions as the hardy *nymphaes*. *Pekinensis rubrum* was in fine shape at the time of our visit (July 5th), bearing aloft its magnificent blossoms of rosy carmine which when fully expanded measured 10 to 12 inches across. To our mind this is the finest of the dark-colored *nelumbiums*. The outer petals are well reflexed, the foliage large and handsome. *Kinsiren* is a white variety, shaded pink, an early bloomer and flowers freely throughout the season. *Osiris* is a rich deep rose, the flower globular in form and it is also among the earliest and finest flowering.

The commoner varieties of the hardy *nymphaes* are so well known that comment on them is superfluous here. Among the newer and choicer sorts W. B. Shaw is conspicuous. This variety has rosy pink flowers and is undoubtedly the finest of the *odorata* section. *James Brydon* is another superb variety, rosy crimson, with the reverse of the petals silvery. *Marliacea ignea*, flowers bright carmine, for size and substance is one of the best. *Pygmy Helvola* is a little gem; while the flowers are only about an inch or so in diameter they are of the purest and deepest yellow, swaying on the bosom of the blue water like flakes of virgin gold. It is exceedingly free flowering and altogether a most desirable thing. For a larger flowered good one there is *odorata sulphurea* with blossoms four to five inches in diameter. *Luciana* is a good soft pink and keeps its color right through the season. Among the white varieties nothing shows up better than *tuberosa Richardsoni*. It is pure white and quite double and bears immense globular flowers 8 inches in diameter.

The tender *nymphaes* were as yet but sparingly in bloom, *O'Marana* and *George Huster* being the only ones

we particularly noted. Both these are fine the latter deeper in color and perhaps the best of the two. These are the two fine reds. *Victoria regia* and *Victoria Trickeri* are promising well for a grand show later.

G. C. WATSON

## NOTES FROM THE FRANCO-BRITISH EXHIBITION.

In brilliant weather a very successful show was held in the Palace of Music, London, on June 24, 25, 26, under the auspices of the Horticultural section with Colonel Prain, director of Kew Gardens, president, and J. A. Alexander, secretary. It is seldom that a floral exhibition is favored with such a suitable setting; within and without the effect was extremely

Bedding at the Franco-British Exhibition by Messrs. Sutton

pleasing. It was a popular event and the building was crowded with visitors from all parts of the world. No extra charge was made and the flower show is one of a number of variations which will give the season ticket holder full value and interesting change. It was said that application for space was four times in excess of that available. A fair number of French growers were showing but it

Group of Japanese Maples by W. Fromow & Sons

could not be regarded as a competitive test between the two countries; a number of prominent French horticulturists with their ladies were entertained by the Royal Horticultural Society on the 22nd. The spirit of the "Entente Cordiale" which this unique exhibition so happily illustrates had opportunity to show itself as a real binding force, linking together in social fraternity men who have mutual interests and aims. Orchids were not largely shown; no doubt they were being held in reserve for the Holland House show. A very fine exhibit, staged in striking and original fashion was shown by Sir J. Colman, arranged in pyramid form which was boldly arresting, with the

advantage of a clear view of every individual specimen. It is a design well worth imitating, and well deserved the gold medal awarded. Carnations were a leading feature, American and Malmaison being represented in great array. *Begonia Lady Cromer* is worth a note as to the perfection of size and form; flowers a shaded pink. Messrs. W. Fromow & Sons' four groups of Japanese maples on either side of the entrance and exit doors were awarded a gold medal, the light character of the building showing up the colored foliage with good effect. The visitor to the exhibition itself will find much to please in floral designs. The sub-tropical and ordinary bedding has been well carried out by Messrs. Sutton and Carter & Co., French roses in immense quantities are bedded out and showing well for a bright display in a month's time. The Australian Court is rich in palms and native plants and a very fine rockwork effect is well constructed of native ferns. Another horticultural show here is proposed for September 30, October 1, 2, 3, of an open character largely devoted to fruit and vegetables. EDGAR ELVIN.

## PUBLICATIONS RECEIVED.

The Sugar Beet Seed Breeding Station of Wohanka & Co., Prague, Austria, have sent out through their American agent, Chas. W. de Rekowski of Detroit a very comprehensive volume of 45 pages and eight full-page plates on the improvement and culture of the "Perennial Seed Beet."

Bulletin 117, issued June 1 by the West Virginia Agricultural Experiment Station is devoted to the tomato. It contains notes upon the history of the tomato, the development of modern forms, breeding new varieties, field culture, winter culture, and financial returns. Two full-page illustrations show the system of growing under glass and single-stem training.

The Report of the Secretary of Agriculture on the Southern Appalachian and White Mountain Watersheds recently issued treats on their commercial importance, area, condition, advisability of their purchase for national forests and probable cost. Two large maps accompany the report. The arguments presented in favor of protection of these mountain forests are very convincing and present facts that every citizen should know whether he lives in the territory under consideration or elsewhere.

Louisiana State Horticultural Society; Proceedings of the Fifth Annual Meeting held at Minden, La., February 20, 21 and 22, 1908. Among the interesting contents of this volume are addresses by J. E. Halligan on Fertilizers, Jas. A. Hearn on Transportation and Co-operation, Prof. Guy L. Stewart on Southern Horticulture, Wilmon Newell on Insects Injurious to Truck Crops (illustrated), A. H. Rosenfeld on Insects Injurious to Louisiana Fruits (illustrated), and C. W. Eichling on Cut Flowers for Profit in the South. The secretary's address is F. H. Burnette, Baton Rouge, La.

# NEWS OF THE CLUBS AND SOCIETIES.

## THE GREAT S. A. F. TRADE EXHIBITION.

Now that the spring rush of business and work is practically over thoughts will naturally turn to the annual convention to be held at Niagara Falls, N. Y., August 18-21.

The trade exhibition of which the management has been placed in my hands, will be as interesting and complete as in former years. Entries which have been made up to now bear me out when I say that I think this will even be the banner year for this branch of the S. A. F. convention. It will be worth while to travel a long distance to see all the good things that will be shown here. It is still five weeks to the time when all florists will wend their way to beautiful Niagara Falls, but already there are about fifty firms and individuals who have spoken for space and are making preparations to show their wares and products to the many visitors who will fill the large halls and rooms where the exhibition will be held. Among those already booked are the following:

	Square feet.
Altimo Culture Co.	50
Boas & Co.	55
H. Bayersdorfer & Co.	400
Chas. D. Ball.	100
Bobbin & Atkins.	170
A. K. Banks.	24
A. T. Dodginton.	150
J. L. Childs.	120
Arthur Cowee.	125
H. A. Dreer.	400
Detroit Pottery Co.	56
A. T. De La Mare Pub. Co.	19
Foley Mfg. Co.	80
Herenden Mfg. Co.	200
W. C. Heller & Co.	240
Ionia Pottery Co.	100
W. F. Kasting Co.	100
Kroeschell Bros. Co.	100
J. C. Meninger Co.	120
Henry F. Michell Co.	40
The Morehead Co.	19
H. D. Mann Co.	84
W. A. Manda.	100
S. S. Pennock-Meehan Co.	265
F. O. Pierce Co.	64
J. A. Payne.	510
F. R. Pierson Co.	200
Quaker City Machine Works.	24
Reed & Keller.	400
M. Rice & Co.	300
Schloss Bros.	150
Horticulture Pub. Co.	19
Triandly & Schenck.	25
Vaughan's Seed Store.	200
James Vick's Sons.	34
Weathered Co.	100
Whilldin Pottery Co.	50
Wertheimer Bros.	250
Yness Garden Co.	25

I have also had a number of inquiries for hotel accommodations, all of which have been put into the proper hands. From what I have observed by coming into contact with people interested in this meeting I feel sure that this convention will be up to the usual standard, the large Eastern cities will bring their regular quota and no doubt the West can secure good rates, so there should be no reason why the Falls will not see a record crowd of florists. Perhaps it would be well for all, especially those who travel in large parties and wish to stay together, to secure hotel room early.

CHAS. H. KEITSCH.

810 Main street, Buffalo, N. Y.

## SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

### Department of Plant Registration.

Peter Henderson & Co., New York, submit for registration the roses listed below. Public notice of such registration is hereby given and any person knowing the previous use of the names selected or of any other reason why registration should not be made, are requested to forward their objections to the undersigned.

Silver Moon: Cherokee by Wichuraiana—Soft, white, semi-double, flowers four inches across. Climbing habit.

Garnet Climber: Lucullus by Wichuraiana—Deep garnet red, double flowers in clusters. Climbing habit.

Dr. W. Van Fleet: Souvenir du Pres. Carnot by Wichuraiana—Light, rosy pink, double flowers. Climbing habit.

Radiance: Cardinal by an unnamed seedling—Brilliant, rosy carmine, fine buds, splendid habit and foliage.

W. N. RUDD, Sec'y.

July 10, 1908.

## ST. LOUIS FLORIST CLUB.

The St. Louis Florist Club held its regular monthly meeting on last Thursday afternoon in Bowman's Hall and the attendance was large. The trustees made a lengthy report regarding the annual picnic which takes place this week, Wednesday, in Normandy Park. State Vice-President John Steidle, of the S. A. F. next reported regarding transportation to the meeting at Niagara Falls and on a vote of the members the Big Four R. R. was selected, the rate being \$21.40 for the round trip and \$4.00 per berth each way. The party will leave here on the Knickerbocker special, Monday, August 17, at 1 P. M. and arrive at the Falls Tuesday at 8.43 A. M. Any one wishing to go with the delegation should send his name to John Steidle, Central, St. Louis, Mo., before the next meeting of the club. If enough make the trip to fill all the lower berths of a car a special will be at the club's disposal. The nomination of officers was next in order and resulted as follows: W. E. Young and Walter Retzer for president; Henry Emunds, Edwin Denker and George Augermuller for vice-president; A. J. Bentzen for secretary; J. J. Reneke and F. H. Weber for treasurer; Geo. Frow, J. F. Ammann, Carl Beyer and Charles Fulgraf for a three-year term trustee. The election will follow at the next meeting which will take place August 13.

The balance of the afternoon was taken up with discussions on important questions. The one of how to increase the attendance and the membership of the club received the most attention. During the discussion some valuable pointers were noted down by the trustees who were by a vote instructed to follow them out, starting with the next meeting, when things will be made so interesting that those who attend will not miss another.

## PITTSBURGH FLORISTS' AND GARDENERS' CLUB.

The club picnic June 25th was held in the grove of the Pittsburgh Rose and Carnation Co. The dancing and music was in the great barn of the Pittsburgh Rose and Carnation Co. and when the end came, as come it must to all good times, great hay wagons were provided to take the picnics to either trolley or steam cars as they might elect, and not the least of the fun was that hay wagon ride.

The regular meeting of the club was held July 7 and five new members were elected. There was a general exhibition of annual and perennial flowers, and a competitive exhibition among the private gardeners. Prize for best display of twelve varieties of perennials was awarded by the committee, Messrs. Clark, Elliott and Ferne, to Robert Lillie, gardener for Mr. Barnsdale, and the prize for best twelve varieties of annuals was awarded to Fred Wissenbach, gardener for W. L. Mellon. There was an interesting collection of wild flowers gathered by Mr. Fred Burki in Bakerstown. Phipps Conservatories, Schenley Park, J. W. Jones, foreman, showed fine sweet peas, and the G. R. Elliott Nurseries, Hills, Pa., showed a large general collection of perennials.

As committee in charge of transportation for the S. A. F. convention at Niagara Falls, the president appointed E. C. Reineman assisted by T. P. Langhans.

It was decided to hold no meeting in August, and the club adjourned to the first Tuesday in September.

H. P. JOSLIN, Sec'y.

## NASSAU COUNTY HORTICULTURAL SOCIETY.

The Nassau County Horticultural Society held its monthly meeting in Pembroke Hall, Glen Cove, on Wednesday evening. President Jaenicke occupied the chair. The minutes of the previous meeting were read and approved of. Two new members were proposed and three elected; also three ladies were elected honorary members. Wm. Mackenzie, chairman of the executive committee, presented a schedule for the fall show which was approved. Contributions of special prizes were offered by Stumpp & Walter Co., Peter Henderson & Co., and W. E. Marshall Co., New York; also W. H. Weeks, Sea Cliff. Several members also offered special prizes. It was voted that no member compete for his own prize, and the committee were asked to have a preliminary schedule prepared by the next meeting. It was also voted to have a Dahlia show in October. J. F. Johnston consented to read a paper on evergreens at next meeting. The awards on the exhibits by points were H. F. Meyer, corn, 81; Valentine Cleves, poppies, 71; Oscar Adder, rhubarb certificate of culture, yuccas honorable mention. An exhibition of evergreens by Mr. Johnston received a vote of thanks. Mr. Johnston gave an interesting talk on evergreens and

Mr. Adder told how he grew his rhubarb.

Judges for the fall show were announced as follows: Julius Roehrs, Sr., of Rutherford, N. J.; Robert Angus, of Tarrytown, and George Hale, of Seabright, N. J.

#### GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The annual picnic of this club will be held at Pine Banks Park, Malden, Mass., on Wednesday, July 29. A great success is assured under the efficient management of the club officers and the following special committees:

Baseball captains: Private, R. W. Curtis; Commercial, F. E. Palmer.

Ring Master: W. J. Kennedy; starter, P. M. Miller; handicapper, Wilfrid Wheeler.

Judges: William Downs, T. J. Grey, E. Holmes, E. Johansson, P. J. Turley, Duncan Finlayson, Kenneth Finlayson and James Miller.

Refreshments: D. Finlayson, J. P. A. Guerineau, T. Pegler.

There are eighteen classes in the athletic sports for children and grown people.

#### LADIES' SOCIETY OF AMERICAN FLORISTS.

The secretary of the Ladies' Society of American Florists congratulates the members upon their prompt payment of dues. It shows her that all wish to vote, and expect to be at Niagara Falls in August.

MRS. C. H. MAYNARD, Sec'y.  
219 Horton Ave., Detroit, Mich.

#### CLUB AND SOCIETY NOTES.

The Albany Florists' Club contemplate an outing and clambake at an early date. Their next regular meeting will be at Patrick Hyde's, Aug. 6.

The Salem Cherry Fair scheduled to take place at Salem, Oregon, has been deferred till July 16, 17, 18, owing to the cold weather and lateness of the season.

The Chicago party for the S. A. F. Convention at Niagara Falls, will travel via the Wabash R. R., leaving at 6 P. M. Monday, August 17. F. F. Benthey is chairman of the transportation committee.

The St. Louis Horticultural Society has issued its preliminary list of premiums for the flower show to be held next November. Class 1, Shaw premiums for plants comprises 21 sections; Class 2, Chrysanthemum Blooms, 11 sections; Class 3, Carnation Blooms, 14 sections; Class 4, Roses, 11 sections; Class 5, Floral Displays, 8 sections; Class 6 is for private exhibit and Class 7 is the S. A. F. silver and bronze medals for new plants or flowers of American origin.

The annual Sweet Pea Show of the Massachusetts Horticultural Society will be held at Horticultural Hall, Saturday and Sunday, July 18 and 19. In addition to sweet peas there will be displays of other summer flowers, and of fruits and vegetables. A feature of special interest will be the competition for the largest and best collection of midsummer fruits, artistically arranged, for which three prizes are offered. The exhibition is free to all and will be open Saturday from 12 to 6 o'clock and Sunday from 2 to 6 o'clock. WM. P. RICH, Sec'y.

## During Recess

### NEW ORLEANS HORTICULTURAL SOCIETY.

The New Orleans Horticultural Society held its annual outing and banquet at Mandeville, across the lake, on July 8, and all of the members expressed themselves as having had a "jolly good" time. The party consisted of thirty-two members and their invited guests, and they made the trip over the lake on the steamer New Camelia. Each of the party was provided with a boutonniere of ferns and China asters, the members red, and invited guests white asters. Among the participants was Prof. A. H. Rosenfeld, of the State Crop Pest Commission, who came down from Baton Rouge as a special guest of the society. The feast was spread at Mugnier's Hotel. The hotel made a very pretty sight, being gayly decorated for the occasion with flags and bunting of the national colors. President Eble opened the banquet with a short address, calling on the members to do full justice to the feast and to enjoy themselves to their hearts' content, and then appointed Secretary Panter as toastmaster of the evening. Speeches were made by Chairman Chopin, of the outing committee; John F. Tims, C. W. Eichling, Jas. Newsham, H. Papworth, Prof. Rosenfeld, R. Steckler, R. P. Upton and A. A. Schalck.

### WHERE CHICAGO IS RUSTICATING.

John Kruch, at Fox Lake. Miss Martha Gunderberg with relatives in Minnesota. Lillian Bloom, (whose name is distinctly floral) at Lakeside, Mich. J. Kidwell, at Boulder Lake, Wis. N. J. Wietor, in Wisconsin. Mr. and Mrs. Rogers, of Wieland & Risch, at Spring Lake, Mich. C. M. Dickinson of E. H. Hunt's, at Pelicon, Wis. Peter Reinberg at his post of duty as an alderman after returning from the Denver convention full of patriotism.

Everybody talks convention and we look forward to a large number attending the S. A. F. meeting at Niagara. The younger element of the trade played a very spirited game of base ball at Belle Isle. Thanks to the efficient leadership of Capt. Rahaley and the excellent work of Andy Ferguson, Jr., Bob Flowerday, Jr., the Michigan Cut Flower team took the laurels from the Detroit Cut Flower representatives with a score of 19 to 5.

FRANK DANZER.

The annual picnic of the Omaha (Neb.) Florists' Club will be held at Krug's Park, Thursday, July 23, afternoon and evening. Good music and entertainments of various kinds are promised. Foot races at 4.30 P. M., comprising a ladies' race, men's race, girls' race and boys' race, for which prizes will be awarded. Group photograph to be taken at 5.30 P. M. Supper, 6 P. M.

The Lake Forest (Ill.) Horticultural Society will hold an exhibition of out-of-door flowers and vegetables July 15. In conjunction with this the Women's Club will give an exhibit and the stores will be closed for the day.

## Obituary

### Rudolph Reynders.

Rudolph Reynders, florist, of Oil City, Pa., was struck by a Lake Shore train at the railroad crossing on the evening of July 4, and died a few hours later. Mr. Reynders was a native of Lancaster, Pa., where he was born Sept. 18, 1865. He has lived in Oil City for about 12 years and has conducted with much success a greenhouse business near the St. Joseph and Grove Hill Cemeteries. He leaves a wife and two children.

Few men in the city were so well known and none was more generally popular. He was a man of wonderful physique, and his heart was in proportion. He was kind and affable with strangers and the soul of generosity with his friends. No man ever lived in the community who was more industrious. His perfect physique enabled him to do the work of two or three ordinary men and he worked early and late, but was never so busy but that he could find time and inclination to do an errand of mercy. The fact that he was carrying flowers to a sick friend and to a house of mourning on the day of his death is typical of the man and in part explains the unanimous expressions of sorrow that his frightful death has aroused.

### James Cole.

James Cole, one of the oldest florists in Illinois, died at Peoria on June 30, aged 87 years. Mr. Cole was born in Devonshire, England. He came to this country in 1857, settling first in Toronto, Canada, and afterwards removing to Chicago and in 1863 to Peoria. His wife died in 1902. Three sons survive him.

### Carl R. Pfening.

Carl R. Pfening, florist and landscape gardener died of pneumonia at Jamaica Plain, Mass., on June 27.

### Isabella D. Poynter.

Isabella D. Poynter, wife of Thomas Poynter, a retired florist of Brooklyn, N. Y., died on July 6, aged 67.

### PUBLICATIONS RECEIVED.

The West Virginia Agricultural Experiment Station, at Morgantown, sends out a valuable calendar under the title of "Let us Spray," giving directions for the preparation and use of the various spraying remedies for fungous and insect enemies, together with a list of the dealers in these materials.

The Declaration of the Governors, as adopted at the White House conference on the conservation of natural resources, May 13-15, 1908, and "The Value of Natural Scenery," an address delivered before the conference by J. Horace McFarland, are contained in the latest pamphlet published by the American Civic Association.

### INCORPORATED.

The Newcastle County Agricultural Fair Association, Brandywine, Del.; to promote agricultural and horticultural interests; capital, \$50,000.

### A VALUABLE HEATING APPLI- ANCE.

Again, the active brain of the scientific world has been busy for the benefit of the greenhouse worker, and in our advertising columns will be found the latest addition to the improvements intended to simplify and perfect the methods of heating greenhouses by hot water circulation. The new features of the Automatic Circulator now offered for the first time by the W. W. Castle Company are that the apparatus is attached to either flow or return pipes in a hot water system, requiring no base to be levelled up to truth with pipe, thereby obviating any opening in same and causing binding in propeller shaft, and equipped with a valve so constructed that in case anything should retard or stop the impelling propeller the flow of water is not checked but immediately automatically shifts itself so that the gravity propulsion is put into operation and will take care of the circulation. The Castle Company has gained the confidence of the trade in a marked degree, considering the brief time they have been in the field. Two contracts to install their largest boiler were received in one day this week.

### THE TOWER HOTEL.

Here is a house well recommended, located within two minutes' walk of the convention and exhibition of the S. A. F., and directly opposite the

Falls, where a special rate for S. A. F. visitors has been made, \$2.50 per day on American plan, two persons in a room. Capacity, 150 guests.

### WHOLESALE SEEDSMEN'S LEAGUE.

Office of the Secretary.

Bristol, Pa., June 27th, 1908.

At the ninth annual meeting of the Wholesale Seedsmen's League on the 22nd of June Messrs. F. W. Bruggerhof, J. R. Rice, and Albert McCullough were re-elected directors.

President Bruggerhof announced that a meeting of the Board of Directors would be called in the early autumn to elect officers and to consider a very important proposition. The board consists of F. W. Bruggerhof, J. B. Rice, Chas. H. Breck, Albert McCullough, S. F. Willard, W. H. Wood, W. Atlee Burpee, Robert Buist, and Burnet Landreth, secretary.

### GREENHOUSES BUILDING OR CONTEMPLATED.

Jackson, Tenn.—T. L. Metcalf, one house.

Gardner, Mass.—John Bass, one house.

Roslyn, Pa.—Edward Towill, house 35x150.

Beard, Ky.—G. O. Klein, house 20x100.

Hammond, Ind.—Otto Greutner, additions.

Baltimore, Md.—Chas. Siegwart, additions.

Cedar Falls, Ia.—J. Bancroft & Son, additions.

Janesville, Wis.—Dr. Dwight, range of houses.

Johnston, Pa.—Herman Neissner, one house.

Warrensburg, N. Y.—S. E. Prosser, one house.

Wesely, R. I.—J. Henry Schaffer, house 21x50.

Toronto, Ont.—Wm. Bowers, range of rose houses.

Lancaster, N. Y.—W. J. Palmer, range of houses.

Faldwinville, Mass.—Dr. W. F. Robie, one house.

Southampton, Pa.—Stephen Mortenson, house 50x300.

Indianapolis, Ind.—A. Wiegand & Son, show house.

Niles Center, Ill.—Joseph Brooks, two carnation houses.

Jacksonville, Ill.—J. Heintz & Sons, five houses 130 feet long.

Brampton, Ont.—Dale Estate, five houses, each 300 feet long.

Swampscott, Mass.—A. W. Preston, conservatory 100 feet long.

Mt. Greenwood, Ill.—Mt. Greenwood Cemetery Association, carnation house.

Negaunee, Mich.—Cleveland Cliffs Iron Works, range of houses; Andrew Lindquist, contractor.

Weiland & Risch, Chicago, have their new range of rose houses, ten in number, practically completed. This range was built by Michael Winandy, Chicago's old time contractor.

### CATALOGUES RECEIVED.

John Lewis Childs, Floral Park, N. Y.—Descriptive List of Bulbs and Plants for Fall Planting.

A. T. Boddington, New York, N. Y.—Midsummer List for 1908. This catalogue has a strikingly effective and appropriate cover in vermilion and gold. It is one of Mr. Bunyard's best efforts in cover designing and will not fail to serve well its purpose in catching the eye and inducing a desire to look within.

Assistant Chief Casey has asked the fire marshal's office to investigate the recent fire in the flower store of Frank Howard, 21 Boylston street, Cambridge, Mass.

### THE U-BAR RECOMMENDED ABROAD.

Speaking of greenhouses, it would appear that home builders might learn a little in America. The extraordinary growth of the florists' trade in the United States has, apparently, set ingenious minds to work, and new ideas in house fittings are constantly appearing. To my mind, the U-bar greenhouses would be of service to many on this side, as the idea does away with the sash bar plate and gutter. This means a maximum of light, and no bother with rotting sash bars, as they are all iron. Apart from this, the U-bar gives a very neat finish.—Horticultural Advertiser, England, July 1, 1908.

### LIST OF PATENTS.

- \$92,532. Rake-Head Bar and Teeth. Charles E. B. Long, Owensboro, Ky.
- \$92,536. Lawn-Mowing Machine. Emery M. Mitchell, Asheville, N. C.
- \$92,910. Grass-Grubber. Charles W. Stark, Mountain Lake, Minn.
- \$92,967. Seed Planter. Samuel C. Thomas, Bean Lake Station, Mo.

## KILMDEAD TOBACCO DUST

Free from Sand or Dirt Kind  
FOR FUMIGATING AND DUSTING

Dusted on Plants it covers large surface.  
One Quality for Both Uses

Our Tobacco Dust is the pure tobacco, free from sand and dirt, strong in nicotine and always of the same strength, making it superior to any dust on the market. Costs you no more than the ordinary product and will do twice the work. 10 lbs. \$1.25, 25 lbs. \$2.25, 50 lbs. \$3.00, 100 lbs. \$5.00.

## Seed Trade

The season of the year approaches with a crop conditions and prospects is about the only subject which attracts general attention and interest. The last advices from California indicate that some crops are good and others only fair, and while it is too early to say with confidence what the finished crops will be, as there is yet time before harvest for serious damage to be wrought, still as a general proposition there is likely to be little change from present indications.

Accepting this as "official," we can say that onion seed will be a large crop, a bumper crop in fact, and the cry of short acreage which the California growers have repeated with tire-some persistency is more of a ghost raised to justify their abnormally high prices on future seed which they expected of the seed trade last winter. It is a far cry between 25c. and \$1.25 onion seed, and while the former was unprofitably low, the latter will prove in the end to be unprofitably high, not only to the seedsmen but to the growers. If the crop when harvested proves true to its present promise in California and the East, there will be with reserves carried from last year not less than 1,500,000 lbs. of onion seed in the United States, and every one knows that this will be considerably in excess of the annual consumption. It certainly looks as if there would be a heavy decline from last winter's contracting prices.

Lettuce seed, on a somewhat increased acreage looks now like an average of from 40 to 75 per cent. of the expected crop, a few specialties being very short, but on standard sorts while jobbing prices will no doubt advance from 15 to 25 per cent. there will be no famine figures.

Carrot will be a short crop, possibly 40 to 60 per cent. Radish also will be short, but those having a critical trade probably do not rely on California-grown radish seed.

The yield of sweet peas per acre will fall considerably below average, ranging from 800 to 1200 lbs. against 1200 to 1800 lbs., which is about the normal yield. This shrinkage is due to lack of sufficient moisture, the vines attaining only about half their usual height. Prices should rule slightly higher on the mixed colors, and will be from 20 to 40 per cent. higher on the fancy named varieties. All indications are that the Spencer type are bound to supersede the old type to a very great extent, as the flowers are larger and have much more substance, and are really more beautiful.

Salsify will be a fair crop and average prices should be maintained. Parsnips will be light but percentages are not available. Celery, endive, kale, leek, mustard and spinach will be about average crops, but excepting

## GIGANTIC PANSIES

Can only be produced from the **Giant Strains**. Our **CHALLENGE PANSY** seed contains only the **Giant** self colors, the **Giant Striped** and **Variegated** and the **Giant Blotched**, all carefully mixed in proportion. You could not buy better seed if you paid **\$100 per Ounce**.

### PANSY BODDINGTON'S CHALLENGE

Trade pkt. 50c;  $\frac{1}{8}$  oz. 75c;  $\frac{1}{4}$  oz. \$1.50;  $\frac{1}{2}$  oz. \$2.75; Ounce \$5.00

*We also offer pansy seed in separate colors.*

*Write for special price and catalogue.*

### ARTHUR T. BODDINGTON

SEEDSMAN

342 West 14th Street - NEW YORK CITY

## "STOKES STANDARD" PANSY SEED

**Stokes' Standard Mixed Pansy** is the finest strain of Giant Pansies it is possible to produce. It is a blend of all that is finest in Pansies from France, England and Germany. It is absolutely unrivaled in range of magnificent colors, size and substance. Trade pkt. (2000 seeds) 50c;  $\frac{1}{8}$  oz. 85c;  $\frac{1}{2}$  oz. \$3.25; 1 oz. \$6.00;  $\frac{1}{4}$  lb. \$20.00.

**Kingly Collection of Giant Pansies Mixed.** A most excellent strain, the same as has been sold for years by the late firm of Johnson and Stokes and has given great satisfaction. Price,  $\frac{1}{2}$  trade pkt. 30c; trade pkt. (2000 seeds) 50c; 5000 seeds \$1.00; per oz. \$5.00; per  $\frac{1}{4}$  lb. \$14.00.

**Send for Special Pansy Circular**

**STOKES' SEED STORE, 219 Market St., Philadelphia, Pa.**

possibly mustard, are not grown in sufficient quantities to be much of a factor in determining prices.

Such crops as are grown in the middle west are not considered up to average at this time of year, late varieties of sugar corn and many varieties of vine seeds in particular, but nothing definite can be said about them at present, as there is yet time for improvement, and always time up to harvest for deterioration.

Garden beets will be in short supply, and particularly such varieties as Detroit Turnip, Crosby's Egyptian, Crimson Globe, Columbia and Stinson. Prices should show a marked advance. In fact, Detroit Turnip is now being quoted in moderate quantities only at 25c. to 30c. It may be well to remark that only wholesale prices are referred to in these notes, unless otherwise

specially mentioned. Mangels show in a moderate way the advance, but thus far no variety has shown many marked shortage. Peas will be short again, and present indications are that the crop will not be materially better than last year, possibly not as good. Of course, percentages cannot be given, but in view of all of the known facts prices can hardly fail to rule as high especially the common varieties. Reports of a reliable character from canners in all parts of the country indicate that the average pack of peas will be about 60 to 70 per cent. on the acreage, which was about 10 per cent. larger than a year ago. The result has been an immediate advance in prices, and a sudden kindling of interest on the part of jobbers and wholesale grocers, who have become eager buyers. An active advancing market on

## ANGLO-AMERICAN MUSHROOM SPAWN.

**ANGLO-AMERICAN SPAWN COMPANY**  
Kennett Square, Pa.

spot canned goods means as a rule ready sale of futures, and this will create a good demand for future seed peas. Certainly the man or firm who last spring placed a liberal order for future seed peas and beans, may congratulate himself on his foresight. In snout, it looks now as if the only item which will be in large surplus will be onion seed.

Of Lima beans little can be said until the crop is actually housed, as even after harvest the crop may be ruined by rain. In tomatoes, both the canned product and seed will be short.

Clover and timothy seed prices are likely to suffer a severe sinking spell ere long, particularly the former, but the prediction that clover will job at \$5.00 before May 1, 1909, will scarcely be realized.

Further particulars will be given from week to week.

The Stokes Seed Store reports a run at present on pansy seeds, the most popular this season being Stokes' Standard International Blend, Bugnot Giant, Masterpiece, Mme. Perret, and President Carnot. A unique one-color picture of a single pansy bloom forms the frontispiece of the new 12-page circular of seasonable offerings in seeds and bulbs.

The present crop of Bermuda onion seeds will fall far short of last season, owing to the bad weather experienced during the winter and spring months. It has been quite an unprecedented bad year for all crops and the tomato plantations were destroyed by disease.

#### BUSINESS CHANGES AND NEW ESTABLISHMENTS.

A. Lang has removed to his new store, 44 Madison street, Chicago.

Lundberg Bros., florists, Auburndale, Mass., have discontinued business.

W. S. Stanley is about to start in the nursery business at Baynes, B. C.

E. Leonhard & Son succeed E. Leonhard at Portchester, N. Y., as retail florists.

R. Altman, a pioneer florist of Manitowish, Wis., is about to retire from business.

Berkeley, Cal.—A new retail flower store by the Pacific Floral Co. on University avenue.

Cleveland, O.—A new flower and seed store by Schlaefer & Owcheek at 7403 Dunser avenue.

Mrs. S. A. Moir has closed her flower store in Brockton, Mass., and the business is for sale.

Radke & Vogt succeed Frank Vogt in the retail florist business at 4136 Cottage Grove avenue, Chicago.

The County Seat Nursery, Logan, Ia., formerly owned by J. H. M. Edwards, has been sold to Chas. F. Luce.

I. C. Willis, senior partner of the Salineville Floral Company at Salineville, O., has retired from the firm.

Charles W. Mowry has purchased the Daniel Brown farm at Union Village, Conn., and will start a nursery.

The greenhouse establishment recently run by Mrs. Tyrill at Corfu, N. Y., has been leased to Wm. Ehmann.

Mrs. Mary A. Reissig resumes control of the establishment at Riverside, Ill., Mr. Mayer's lease of same having expired.

The Corning Floral Company, Corning, N. Y., has purchased the W. J. Cheney greenhouse property on West Putney street.

The greenhouses owned by A. A. Weldon, for a number of years, at Worthington, Conn., have been sold to Leland Watkins and John Canfield.

The greenhouse owned by W. J. Cheney, at Corning, N. Y., has been purchased by the Corning Floral Co., and will be removed to a new location.

The firm of Goossens & Hellemons, at Audenbosch, Holland, has been dissolved and the business will be continued by Mr. Hellemons under the firm name of L. J. Hellemons.

#### NEWS NOTES.

The Columbia Gardens, Butte, Mont., Victor Siegel, gardener, are to be enlarged.

The greenhouse of Geo. M. Roak at Auburn, Me., was struck by lightning on July 2. Damage slight.

The latest arrival in the Flower Growers' Market, Chicago, is Herman Schau. His daughter will have charge of the selling.

The offices of the National Nurserman at Rochester, N. Y., have been removed to 218 Livingston Building, Exchange street.

Plans have been completed for a flower show at Bar Harbor, Me., on August 6. The show will be held at the Building of Arts.

In the recent timber fires at Brunswick, Me., a nursery maintained by Prof. Austin Cary, of Harvard University, was burned over.

George Reinberg, who has the distinction of being the only Chicago grower of orchids for the trade, has doubled his stock this season.

The Foley Manufacturing Company have the contract for the new greenhouses and connected buildings for the University of Illinois at Urbana.

A large plate glass window in the flower store of E. H. Beears, Reading, Pa., was shot through by some unknown person on the street, July 6.

Victor R. Gardner has been elected assistant professor of horticulture at the University of Maine. Leroy H. Harvey has been elected instructor in botany.

The elm leaf beetle is very abundant in and about Boston this year. Many fine trees in the suburban districts are as brown as if a fierce fire had swept over them.

Alex. Mead & Son have bought the greenhouses of John Cooke at Greenwich, Conn., and will tear them down, using the glass, piping, etc., in additions to their establishment on Lake avenue.

Charles Rose, an employe of Wax Bros., florists, Boston, has been arrested charged with entering and robbing the store at night during the time he was enjoying a vacation at the firm's expense.

Alexander Johnson has been appointed City Forester of Providence, R. I. Mr. Johnson is a son of George Johnson, who has conducted a green-

house establishment on Elmwood avenue for many years and is well informed on tree topics.

The granite statues of Pomona, Ceres and Flora which adorned old Horticultural Hall in Boston, which were purchased and set up on his grounds at Clifton by the Late Benj. Ware, after the demolition of the old building, have been secured by Mr. Arthur Little who will use them to adorn his place at Beverly.

At the Reclamation of the Flats at Washington, hundreds of men and numerous teams are at work leveling and planting the grounds. The portion which has been finished is very beautiful, shrubbery and flowers of numberless varieties having completely transformed an erstwhile unsightly and unhealthy section into a garden of Eden.

Plant dealers advertising for general wholesale trade report variously on collection of accounts but the consensus seems to be that the experience with the different sections through the recent season follows almost on identical lines with what has commonly been understood as to the effect of the financial disturbance, viz., New York, bad; New England, slow; elsewhere, good; West, very good.

You will find something worth reading on every page of HORTICULTURE.

## FLOWER MARKET REPORTS

### BOSTON

This market is at its duldest at present, but better business is now almost due, and we hope to report improvement soon. Roses are exceedingly small and quality poor, the only claimants to commendation being Kaiserin and Carnot. Carnations are small as a rule but there are some excellent flowers being sent in by some growers, considering the season. Sweet peas are better than one would expect and show that they are regarded as worthy of careful nurturing by their growers. Aquatic flowers are a favorite window adornment with the florists at present. Garden flowers are not in evidence outside of gypsophylla and rudbeckias and a few other things that withstand any temperature that may attack them.

### BUFFALO

Any quantity of unsaleable stock and very little business is the situation in the cut flower line here. Some good carnations are still to be had also auratum and longiflorum lilies, together with fine sweet peas and any amount of the latter which are good for one day only. Beauties are still in good supply, but the quality not of the best; the shorter grades have been too plentiful and very little demand. There is an abundance of greens such as asparagus, smilax, adiantums, etc., with little or no demand. The wholesale coolers are full most of the time and the retailer has little or no trouble in filling his orders.

### CHICAGO

The Chicago cut flower market is holding its own with last year. The American Beauty growers have thrown out their old stock and the longest blooms cut now will average from twenty to twenty-four inches. There is no better white rose than Kaiserin for summer blooming and for light pink President Carnot leads. There is extra heavy demand for Killarney but they develop so rapidly that they must be cut in close bud and kept cool. Carnations are about over. Everyone is anxiously awaiting the coming of asters which are beginning to come in but with very short stems. Shasta daisies are getting smaller and prices are dropping accordingly. Among the flowers not listed in our regular price quotations are rubrum lilies at \$4.00 per 100; candidums at

\$6.00 per 100 stalks; alyssum at 40 cents, coreopsis at 25 cents and asclepias at \$1.25 per 100. Also pansies at 25 cents per doz. bunches. Cold storage peonies are apparently feeling the hot weather and do not hold up well after leaving the refrigerator, but good peonies, as the Late Rose now in the market, sell well. On the whole the Chicago market is as active as could be expected at this season.

### PHILADELPHIA

American Beauty roses show up about as good as anything at present. There is very little good stock coming in. Kaiserins are fair and there are a few good Killarneys arriving. Carnations will shortly be supplemented by the aster crop. The asters are only fair as yet. Orchids are scarce. Sweet peas in scanty supply and mostly low grade, Lily of the valley is in fair demand for the season. Easter lilies and auratums are excellent and find a ready market. Good smilax sells but there is far too much asparagus plumosa.

### NEW YORK

The midsummer quietude and the midsummer heat have together obliterated whatever little trace of life there was left in the florist trade of the metropolis. No complaints are heard; all accept the situation with compliant submissiveness, even a touch of resentfulness if anybody approaches them on a business topic. The growers with commendable patience and industry continue to clip off and send in whatever will hold together of the flimsy product of these scorching days. Neither the stock nor the demand are worth much worry at present.

### PHILADELPHIA NOTES.

Wm. Paul Binder, late of Pittsburgh, has accepted a position as manager on

the Shellem place, at 17th and Wolf st.

Michell reports an unusual demand this season among the private gardeners for roses for winter forcing. I. Rosnosky, will represent Henry F. Michell Co., at the Convention at Niagara, and he promises to have some novel things to show to the trade.

The first day's sale of the Graham Co.'s effects brought out a representative gathering of the trade, and the bidding was brisk. Good prices were realized on most of the desirable articles. J. J. Habermehls Sons, C. H. Grakelow and C. M. Keegan were among the heaviest purchasers.

C. M. Keegan opened the old Graham store at 104 So. 13th St., July 13th. Wallace Faust and Adolphe Rueger remain in responsible positions with the new proprietor. The store will be thoroughly renovated and will be conducted on up-to-date lines without giving undue prominence to the decorating business. The latter branch will be taken care of by Mr. Keegan's other concern, the National Decorating Company.

Mr. Howard M. Earl and Mrs. Earl reached home from their trip to the Pacific Coast, June 27th, having arrived in Detroit in time for the opening of the Seedsmen's Convention. Mr. and Mrs. W. C. Langbridge, who accompanied them, arrived at their home at Albany, N. Y., July 6th, having stopped to visit friends enroute between Detroit and Albany. The party say they had a delightful trip, but are somewhat chary of the information they are giving out concerning crops.

Among the happy vacationists taking advantage of the brief season of inaction are Phil. F. Kessler and Percy Richter, of New York, who have been touring New Jersey in an automobile as guests of E. Asmus. Mr. Kessler is extending his outing this week to Boston, Portland, and other New England centres.

### Bostrom Improved Builders' Levels and Farm Levels

For Park, Cemetery, and Landscape Gardening use, take the place of expensive Engineering Instruments. Simple in construction, easily adjusted, more substantial and less cumbersome than the more elaborate and complicated instruments. Practical, up-to-date instrument that any one can use. Write for descriptive circulars and be convinced that this Level is necessary to complete your outfit. Builders' Level \$25.00. Farm Level \$15.00.

# The Latest and the Best in Hot Water Heating

## AN AUTOMATIC CIRCULATOR

(Patent Applied for)

Something which works while you sleep. No anxiety as to whether the power for forced circulation is on or off. Should anything happen to the power, putting your forced circulation out of commission, this new device, not dependent upon anything except nature's laws, takes up its task automatically.

### ABSOLUTELY AUTOMATIC

and it knocks everything else in forced circulation silly. Made with single, double or multiple propellers as our customers desire. After three years' experience we know we have the best apparatus ever built, equally as efficient as the original **Electric Circulator** or its copies in operation, simpler by far in construction, cheaper in price and any one who can make up two flanged joints and attach a belt can install it.

**It is a winner. Drop a line to us and we will be glad to show you.**

We have a **new coupling** for pipe or boiler tubes which is worth looking up. We hope very soon to show steam men something for returning water of condensation and automatically producing a vacuum. We are still placing the **Castle Boiler** and ready to accept orders for best modern piping systems. Hot Water or Steam.

PATENT APPLIED FOR

### Why My New Curved Iceless Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars incased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: Result, the driest roof ever used for greenhouse purposes.
- 4th. **THE MOST IMPORTANT OF THEM ALL.** The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

**William H. Lutton,** Horticultural Architect and Builder  
West Side Ave Station (C.R.R. of N.J.) Jersey City, N.J.

### The Advance Ventilating Apparatus

We not only give you the best ventilating apparatus on the market, the strongest, easiest operated, and the most lasting, but we sell the same at reasonable prices and profits. All we need — all we ask — is a trial to show you that our claims are not overblown. Get our estimates.

## *The Handy Hand Book*

### SOME DAY YOU WILL WANT HEAT FITTINGS

AND WANT THEM QUICK —

just think how mighty convenient it would be that day to have a book handy on a hook, that lists, describes, illustrates and prices not only exactly the heating fittings you want, but every piece, stick or fitting required to erect and equip a greenhouse. The whole greenhouse proposition would be right before you under the two covers of *one book*. A sort of boiled down, bound together catalog so arranged that you can find what you want in a jiffy. That is exactly what our Handy Hand Book is. It is now just ready — edition limited, send at once for it.

# LILIUM HARRISII

We offer a selected stock of the original true Harrisii for early forcing. These bulbs have been grown from the original pure Harrisii, and will be found to be splendid stock for early forcing, for which purpose Harrisii is so valuable. We have had the stock inspected, and are assured that it is almost absolutely pure and almost entirely free from disease. This is not stock picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered, both in regard to freedom from disease and purity, and not the late type now so often furnished.

Lilium Harrisii has been deteriorating slowly for years, and in order to get back to the true type of the original Harrisii, we have had our stock grown from the original pure stock, and it will be found very superior to the Lilium Harrisii usually offered. While the stock is A No. 1, our prices are as low as, or lower than, the prices asked for indifferent stock.

We have only a limited quantity of this stock to offer, so it will be advisable to place order without delay in order to ensure securing this stock. Bulbs ready for delivery middle to last of July.

6-7 in. bulbs, 350 to the case, \$6.00 per 100, \$50.00 per 1000 }  
 7-9 in. bulbs, 200 to the case, 9.00 per 100, 80.00 per 1000 } Full Case Lots at Thousand Rates  
 9-11 in. bulbs, 100 to the case, 18.00 per 100, 170.00 per 1000 }

**FREESIA REFRACTA ALBA** Bermuda-grown, finest selected bulbs, 1/2-in. up, \$1 per 100, \$7.50 per 1000.

## Notes from the Arnold Arboretum

The effects of the prolonged drought of the last weeks was already noticeable at the Arboretum in many shrubs particularly in the drier situations, when the heavy showers about the beginning of this week intervened just in time to save them. The drought affected to some extent also the flowering of many plants, shortening the flowering time of some shrubs and hastening the development of the flowers in others. This is for instance the case with the Sorrel-tree, *Oxydendrum arboreum*, which usually does not begin to bloom until the end of the month; several small trees of it are now in full bloom at the foot of Hemlock Hill and are very handsome objects viewed against the dark background. This graceful tree, very attractive with its large and lax nodding panicles of small white flowers, is not so often planted as it deserves. Besides its value as a late flowering tree it is exceedingly beautiful in autumn, when its foliage assumes a brilliant scarlet color. In the Alleghanies, its native habitat, it grows into a slender tree 30 or even 40 feet high, but with us it usually remains a low shrubby tree; it is perfectly hardy here and begins to bloom when it is still a small shrub.

*Rubus odoratus*, though in flower since some time, attracts now more attention when so few shrubs are in bloom; with its large purple flowers and the handsome maple-like leaves it is very attractive and well suited for borders of shrubberies particularly in more shaded situations. As it spreads much by suckers, it should not be planted near small and tender shrubs which would soon be crowded out by it.

Less showy are the American *Diervillas* of which *Diervilla sessiliflora* and *D. rivularis* are in flower while *D. Lonicera* (*D. canadensis* or *trifida*) is already out of bloom. *Diervilla rivularis* is a recently introduced species yet but little known outside of botanic collections; it is like the other species, a low shrub with small pale yellow flowers in terminal clusters denser than those of *D. sessiliflora* and much larger than those of *D. Lonicera*. Though the flowers of these shrubs are not showy, they will help to add variety to the shrubbery at this time of the year.

A handsome shrub is *Indigofera Gerardiana*, often cultivated under the name of *I. Dosua*, a small shrub with grayish green pinnate leaves and light purple flowers in axillary racemes. It is not perfectly hardy, but if killed back it springs up again from the base and the young shoots will flower the same year.

The original form of *Hydrangea paniculata* begins now to flower; it is not as showy as its more popular variety *grandiflora*, which is not yet in full bloom, but with its large panicles of creamy white flowers it is one of the most conspicuous shrubs in bloom.

Among the fruiting shrubs there ought to be mentioned in the first line *Prunus virginiana* var. *leucocarpa*, which is very beautiful with its drooping racemes of amber-colored fruits; it is certainly much more con-

spicuous in fruit than the common Choke Cherry, *P. virginiana*, which has dark purple or finally almost black fruits.

Also the Dogwoods as *Cornus stolonifera*, *C. alba* and *C. Baileyi* are now conspicuous by their clusters of white fruits which will last for some time.

*Clematis tangutica*, a recently introduced Siberian species is very handsome with its large feathery heads made up of fruits with long hairy tails; the large yellow flowers appear in June.

The Staghorn Sumac is now very showy with its dense panicles of scarlet fruits, but still more handsome is its variety *Rhus typhina* var. *dissecta* (*R. typhina* var. *laciniata* of gardens, not of Wood) with its graceful, finely cut foliage surmounted by the scarlet fruits; on account of its fruits it is superior to the similar *R. glabra* var. *laciniata*, which does not bear fruits and is moreover tender in this section of the country.

The Alder Buckthorn, *Rhamnus Frangula*, is attractive with its shining black fruits borne in small axillary clusters along the branches; as the fruits when they begin to ripen change from greenish white to red and finally to black and are ripening in succession, the differently colored fruits in the same clusters give a pleasing variety; the lustrous foliage turns bright yellow in fall.

Alfred Rehder.

## Gloxinias

These beautiful summer blooming plants are too well known to need any detailed description from me at this time, and as for elaborate cultural practice it is also not my purpose to enter into, as this has been threshed over and over again with no small skill.

My purpose is simply to endorse the never-failing charms of the subject of the frontispiece of this paper, which, in this particular case, is a nice specimen plant of the so-called "Spotted Gloxinia." Amongst them usually are to be found elegant types. Choice types when they do appear should be jealously taken care of and seed secured from them. In doing this practical isolation from inferior kinds is absolutely necessary. To perpetuate true to the original extra kinds as they appear, leaf cuttings are resorted to. Considerable fascination, on the other hand, attaches always to the speculative results from new seed, whether that be from the ordinary sources of supply or from our own labors in this line. Gloxinias, though delicate and easily battered by rough handling, are among the longest keepers as cut flowers. They are furthermore indispensable to the gardener for keeping the greenhouse gay in the summer and autumn months.

Every issue of HORTICULTURE contains more or less information concerning civilization's stimulus to new inventions, labor saving devices and clever adaptations intended to benefit the horticulturist by simplifying the processes,

mechanical or otherwise, connected with his art. We think it was Hiram M. Stanley who said that "if man were not at bottom an animal who cunningly devises means to save himself trouble, civilization would never have been born." That the friends and exponents of horticulture stand in the foremost line in developing and expanding civilization of the highest type is a proposition which we believe will be assented to by every one who reads these lines. Further it will not be seriously questioned that the horticulturist who persistently neglects or repudiates these modern appliances in construction and equipment of greenhouses and in material and methods of culture and use of his product which his talented fellow-workers are constantly placing at his disposal is making a serious mistake. While urging our readers to peruse with care and fully investigate all such evidences of progress as are presented in our columns from week to week we would couple with it a reference to the approaching opportunity in the trade exhibition to be held under the auspices of the S. A. F. at Niagara Falls next month. Every one wishing to keep in intelligent touch with the advancement in any or all branches of his art should make it his business to be present on that occasion. He will find in the exhibition alone plenty of interest and instruction to keep him occupied and will go home with a higher estimation of his business and the men engaged in it and a better conception of its possibilities for the future.

It does seem that, notwithstanding all the time and money used in investigating and fighting the various insects and fungous pests that vex the horticulturists and the community in general, each year sees an actual increase in territory menaced and damage done. Gypsy moth, brown tail moth, tussock moth, elm leaf beetle, San Jose and other scales, weevils and blights may be temporarily conquered in one district and an optimistic feeling is encouraged until we learn that in some other place the attacks are doubled in severity and when another season comes around we find the tables turned and the trouble again doing business at the old stand with intensified activity. Just how much these periodic outbreaks are attributable to neglect caused by a feeling of security may not be apparent but when we read in a contemporary that such a man as Professor Southwick, entomologist for the park system of Manhattan, "reports that the tussock moth is no longer a real danger to the trees of the city" we are constrained to believe that either the gentleman has been misquoted or the fool has not been attending to his job. If there is any situation where "eternal vigilance is the price of liberty" in its strongest sense it is in dealing with insect pests. The almost inconceivable rapidity of multiplication of these creatures is not sufficiently recognized. The plea of economy touches a very responsive chord in a community after a costly battle has been successfully waged and the enemy, never idle, is given opportunity to gather strength for the next onslaught. Not until the laws as to individual responsibility are made much more stringent can we hope for any permanent relief from these pestilent conditions. As it is, one indifferent or obstinate owner can nullify much of the public and private effort to exterminate any one of these insects. The ceaseless enforcement of a drastic law may bring distress in individual cases here and there but we see no alternative at present.

## British Horticulture

### THE ROSE SHOW AWARDS

Under ideal conditions, the National Rose Society's show was held on July 3rd, when a brilliant display greeted the record crowd of visitors. The championship prize in the nurserymen's section was won by Messrs. D. Prior & Son. The judges awarded the prize for the best H. P. rose to A. K. Williams, whilst the H. T. prize winner was William Shean, and the best Tea rose Mrs. Miles Kennedy. Gold medals were awarded to two novelties. These were Mrs. J. Campbell Hall, a new Tea, with creamy petals, tinged with rose, shown by Dr. J. C. Hall, Rowantree, Monaghan, and Mita Weldon, a creamy-white Tea, shown by Messrs. Alex. Dickson. Ireland again retained its reputation for raising new varieties. Cards of commendation were granted to Shower of Gold, a yellow rambler variety, shown by Paul & Son; W. R. Smith, shown by Hugh Dickson, and an unnamed Tea, and a pretty variety named Grace Molyneux—these latter being shown by Alex. Dickson & Son. Earl of Gosford, a carmine H. T., staged by Messrs. McGreedy & Son, also received a card of commendation. Some pleasing effects were produced by the groups. Messrs. Hobbies, Ltd., who secured the premier award, had a tasteful arrangement of the best known varieties, a good use being made of Dorothy Perkins, Hiawatha, and Lady Gay. In the foreground were several baskets of roses on stands, with an edging of ferns, *Isolepis gracilis*, etc.

### FRENCH AND BRITISH RIVALRY

This year London has in its midst a Franco-British exhibition, which is attracting many foreign visitors to our shores. The ornamental white buildings contain the finest works of art and specimens of handicraft from the two countries, and it is the best exhibition which has yet been seen in the Metropolis. In the grounds the leading British and French nurserymen are displaying their choicest flowers in gay parterres. The first of the flower shows has recently been held. The number of French nurserymen who competed was somewhat limited. Messrs. Maron et Fils, Brunoy, had an excellent group of orchids, Messrs. Millet & Son, Bourg-la-Reine, displayed strawberries, and Mons. Lagrange, Paris, a collection of nymphæas. The British nurserymen were fully represented. A grand display of cannas was made by Messrs. Cannell, who also have some well arranged groups in the grounds. Begonias were superb in the collection of Messrs. T. S. Ware, Ltd. Lady Cromer, of a delightful shade of pink, was one of the best. Gold medals were granted to the following firms: Messrs. Hugh Low & Co., H. Cannell & Sons, Lord Howard de Walden, Armstrong & Brown, George Mount, T. S. Ware, Ltd., G. & A. Clark, G. & H. Burch, the Hon. Vicary Gibbs, H. B. May & Sons, Dobbie & Co., George Bunyard & Co., J. Hill & Son, T. Rivers & Sons, W. Fromow & Sons, Mons. Debreé and Sir Jeremiah Coleman. The jury who made the awards was composed of seven English and the same number of French horticulturists, Col. D. Prain, C. I. E., being the president, and Mons. Viger, the vice-president.

### THE HOLLAND HOUSE SHOW

A gratifying success attended the annual summer show of the Royal Horticultural Society in the grounds of Holland House, Kensington, on July 7th and 8th. Roses were, of course, a special feature. Four new introductions of Messrs. Alex. Dickson & Sons received awards of merit. George C. Waud is a shapely H. T., of an orange-vermilion tint. It had been shown previ-

ously under the name of Sir Henry Irving, but to avoid confusion with the Henry Irving rose known to American growers the title was altered. A splendid addition to the H. T. section has been made in Mrs. David Jardine, which is of excellent form and of a shell-pink shade. Molly Sharman Crawford is a pure Tea variety, with graceful reflexed petals, and is of a pale lemon hue. The fourth of Messrs. Dickson's batch was Edith Coulthwaite, an H. T. of a salmon pink shade. Other novelties which received an award of merit were Begonia Duchess of Cornwall, a double of rich crimson; B. Frilled Queen, pink; Delphinium Progression, white with a slight shading of yellow in the centre; D. Statuaire Rude, semi-double flowers of a pale mauve tint; Viola Ernest Needham, purple on the margins, and the rest white, except for a shade of yellow in centre; Tunica saxifraga fl. pl., a double-flowered form of a pink shade.

The fruit committee gave an award of merit to a hybrid berry, Low Junior, which has been obtained by crossing a blackberry with a loganberry. The deep black fruit is about 1 or 1½ inches in length and has a pleasing flavor.

### A SUCCESSFUL PROVINCIAL SHOW

This year the summer flower show at York reached its jubilee under auspicious conditions. A deputation from the Royal Horticultural Society attended. As a fitting commemoration of the Society's 50th year the committee provided four special prizes. The first of these was for a festal display of plants and flowers grouped for effect, covering an area of 30 feet by 14 feet. The first prize, won by Mr. W. A. Holmes, Chesterfield, had a skilfully arranged group. In the next class prizes were awarded for a display of garden products arranged for effect, occupying an area of 20 feet by 6 feet. The third class was for an exhibit of bulbous and allied plants, also cut flowers associated with retarded plants. There was a special class for a display of produce from Yorkshire gardens only, but there was only one entry. The gold jubilee medal offered for the best exhibit in the show was taken by Messrs. James Backhouse & Son, who provided an artistic arrangement from their comprehensive collection of alpine and rock plants. There were two awards of merit granted, viz., to Marguerite pink Queen Alexandra, shown by Messrs. R. P. Ker & Son, and to *Nepenthes x excelsa* exhibited by J. Veitch & Sons. Despite the unfavorable weather on the opening day, the receipts were very satisfactory. The show still retains its popularity amongst Yorkshire people, who make a gala of the event, whilst the trade continues to give it their whole-hearted support.

### A PLEASING COINCIDENCE

In a list of sixteen rose novelties recently published twelve were raised in Ireland, including the now famous Dean Hole, which is steadily gaining popularity and a fitting rose to bear the honored name of the first president of the National Society. It is a somewhat singular fact that of the three roses selected by the committee of the National Society as being the best in their respective classes one bore the name of the first president of the National Society, the second the wife of the president of the German Society (Frau Karl Druschki) and the third Madame Jules Gravereaux, the wife of the president of the French Rose Society.

*W. H. Adsett.*

# SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

## Preliminary Programme of the Twenty-Fourth Annual Meeting and Exhibition to be held at Niagara Falls, N. Y., August 18th, 19th, 20th and 21st, 1908

### OFFICERS FOR 1908.

**PRESIDENT**—F. H. Traendly, 44 W. 28th St., New York, N. Y.  
**VICE-PRESIDENT**—Geo. W. McClure, 832 W. Delavan Ave., Buffalo, N. Y.  
**SECRETARY**—W. N. Rudd, Morgan Park, Ill.  
**TREASURER**—H. B. Beatty, Farmers' Bank Bldg., Pittsburg, Pa.

### DIRECTORS.

**For One Year;** E. V. Hallock, Theodore Wirth.—**For Two Years;** Samuel Murray, J. K. M. L. Farquhar.—**For Three Years;** George Asmus, John Young.—**Ex-Officio;** Wm. J. Stewart.

### TRANSPORTATION.

**Points West and South of Buffalo, and Canadian Points.**—Reduced rates have been refused by the passenger associations covering this territory. There are, however, from nearly all cities reduced excursion tickets on sale to Niagara Falls and return, also to Toronto and return by way of Niagara Falls, with stop-over privileges. Members are advised to consult with their local ticket agents, and also to communicate with the secretaries of florist clubs in the larger cities, with a view to joining their parties and taking advantage of any special arrangements they may make.

**Points in the U. S. East of Buffalo, including Pennsylvania, West Virginia, Maryland and the City of Washington and Vicinity.**—(Territory covered by the Trunk Line Association and the New England Passenger Association, except the Bangor & Aroostook R. R., the Eastern Steamship Company and the N. Y., O. & W. R. R.)

A concession of fare and three-fifths on the certificate plan has been secured for those attending the meeting of Society of American Florists and Ornamental Horticulturists, Niagara Falls, N. Y., August 18-21.

### PROGRAMME.

**First Day, Tuesday, August 18—**  
**Opening Session, 2 P. M.**

Address of welcome and responsive address.

#### President's Address.

Annual address of the President. Reports of Secretary, Treasurer, State Vice-Presidents, Committees and other officers.

#### Judging Exhibits.

Judges will examine and prepare their reports upon the novelties and new inventions in the trade exhibition immediately after the close of the opening session.

**Florists' Hall Association, 4.30 P. M.**  
 Annual meeting.

**President's Reception, 7.30 P. M.**

**Second Day, Wednesday, August 19—**  
**Morning Session, 9.30 A. M.**

The members of the Canadian Horticultural Association will attend this session. Welcome to our Guests, by President Traendly. Response by President Walsh. Paper—Fertilizers and Fertility, J. F. Cowell. Discussion.

### Selection of Next Meeting Place and Nomination of Officers.

The selection of the location of the next meeting (polls open one hour) and nomination of officers for next year will take place at this session.

### Ladies' Auxiliary.

Ladies' Auxiliary of the S. A. F. & O. H., 10 A. M.—annual meeting.

### Afternoon, 2.30 P. M.

The members of the S. A. F. & O. H. are invited to attend the session of the Canadian Horticultural Association at the Clifton House, Niagara Falls, Ontario.

### Evening Session, 7.30 P. M.

Illustrated Lecture by J. Horace McFarland—How Florists May Aid in the Crusade Against Ugliness. The members of the Canadian Horticultural Association are invited to be present at this meeting, and the public will be admitted. Admission by ticket, to be obtained from Secretary Ewing, for members C. H. A.; Secretary Rudd, for members S. A. F. & O. H.

### Notice.

All tickets not applied for by 12 o'clock noon, Wednesday, will be distributed to the public, and members delaying their application beyond that time must take their chances of tickets being available.

**Third Day, Thursday, August 20—**  
**Morning Session, 9.30 A. M.**

Paper—Out-of-Door Roses, W. C. Barry. Discussion.

### Election of Officers.

Polls will be open at 10.30 A. M., and remain open two hours.

Amendments to the Constitution and By-Laws.

### The Question Box.

### Afternoon Session, 2 P. M.

The National Flower Show.  
 Address—E. G. Hill. Reports—W. F. Kasting, J. C. Vaughan. General discussion.

**American Carnation Society, 4.30 P. M.**  
 Special meeting.

### Evening.

The evening session will be omitted in order to allow the members an opportunity for an evening view of the Falls and other scenery.

**Fourth Day, Friday, August 21—**  
**Morning Session, 9.30 A. M.**

Address—School Gardens, L. C. Corbett. Discussion.

Paper—State Florists' Associations, Their Value and the Relation They Should Bear to the S. A. F. & O. H., Albert T. Hey. Discussion.

Paper—Planting for Winter Effect in the Northern States, George E. McClure. Discussion.

### Afternoon and Evening.

In the hands of the Buffalo Florists' Club. The bowling contests will be held at Buffalo at this time.

### PREPARING FOR THE NIAGARA TRIP.

The various state vice-presidents and club committees in the large centres are busily at work arranging for the trip to Niagara Falls and all those who can conveniently do so should arrange to travel in company and thus gain the social advantages and other pleasant surroundings and comforts provided for these special trips.

Active preparations are on in New York to get together a very large party to accompany President Traendly over the D. L. & W. R. R. A committee of the New York Florists' Club with Patrick O'Mara as chairman and John Young as secretary in association with state vice-president J. Austin Shaw are looking after the arrangements. All correspondence should be addressed to Mr. Young.

Fred. E. Palmer, of Brookline, Mass., is state vice-president for Eastern Massachusetts and can answer all questions relative to the trip from Boston. E. G. Gillett, 114 E. Third street, Cincinnati, O., will furnish information concerning the trip from Cincinnati and E. C. Reineman, 16 Lowry street, Allegheny, Pa., will perform a like service for those who desire to accompany the Pittsburg party.

As previously announced in these columns F. F. Bentley, 35 Wabash avenue, is chairman of the transportation committee of the Chicago Florists' Club and the Wabash R. R. has been selected as the official route. There are several concessions in the way of stop-overs, boat connections, etc., concerning which Mr. Bentley should be consulted. The St. Louis party will travel by the Big Four Knickerbocker special leaving at 1 P. M., August 17, under the efficient management of John Steidle, Central, Mo., from whom all information may be obtained. It is understood that the Lackawanna Railroad is the favorite for the trip from Washington, leaving on the morning

of Monday, August 17. George H. Cooke is vice-president for District of Columbia and F. H. Kramer is president of the local club.

#### "BUFFALO DAY."

The S. A. F. and Canadian florists will be entertained by the Buffalo Florists' Club on Friday, August 21. In the morning bowling and shooting will be in order and those who do not wish to take part will be entertained by a ride around Grand Island where a ball game will be played between "All America" and a Buffalo team. The committee in charge are working hard to make this one of the most pleasant trips that their brother florists have had in some time.

#### TRADE EXHIBITION SPACE.

Since my last report on the trade exhibition, the following have sent in contracts for the amount of space set opposite.

sq. ft.	sq. ft.
Garford Motor Car Co., 150	J. A. Petersen, 75
J. H. McFarland, 32	Wilson & Boyce, 48
Robert Craig, 250	Lennel Ball, 75
Lord & Burnham, 252	Julius Roehrs, 250
Daniel B. Long, 42	The Advance Co., 48
Florists' Review, 100	I. L. Pillsbury, 19
Lager & Hurrell, 100	The Larkin Co., 27
A. L. Randal Co., 60	C. S. Yeagle, 350
	Benj. Hammond, 100

This with the space already reported makes a total of 7463 sq. ft. sold to date.

A goodly amount of space is still available but especially those who wish large blocks should hurry or they may get left on good locations.

Arrangements have been made with a responsible carting company at the Falls who will take care of all freight sent to the trade exhibition, so that there will be no unnecessary running to and fro and worrying about exhibits being mislaid and not delivered on time.

All those who desire to stop at the Cataract House where the exhibition will be held, or the International, next door, should correspond with Mr. H. Q. Isaacs, International Hotel, Niagara Falls, N. Y., who will act as hotel committee and gladly answer all questions that may be asked in regard to hotel accommodations.

Yours very truly,

CHAS. H. KEITSCH, Supt.  
810 Main St., Buffalo.

#### NATIONAL FLOWER SHOW.

W. N. Rudd has been prevailed upon to accept the position of manager of the National Flower Show. The selection of a manager was left by the S. A. F. executive committee to the committee on local management of which J. C. Vaughan is chairman, with the recommendation that the services of Mr. Rudd be obtained if possible. Mr. Vaughan has called a meeting of his committee for Saturday afternoon, July 25, when with Manager Rudd the committee will take up details of show arrangements.

Chairman W. F. Kasting, of the committee of fifty, will call a meeting of the committee at Niagara Falls during the convention of the Society of American Florists. The meeting will probably be held on Thursday after the discussion of the National Flower Show which is provided for in the convention program.

J. H. BURDETT, Sec'y.

## During Recess

### ST. LOUIS FLORIST CLUB'S ANNUAL PICNIC.

The fifteenth annual picnic of this club took place on July 15 at beautiful Normandy Grove, a most ideal spot for the occasion. This is one of the days on which for the past fifteen years the florists come out for a day's sport and recreation and they surely had it this year. The weather was just right and the three hundred present had a good time.

The most exciting events of the day were the baseball game between the wholesale and retail teams and the bowling contests. During the ball game great excitement prevailed. The large crowd was with the retailers all through and the umpires, Henry Osertag and Fred Ammann, had a hard time. Only five innings were played and the wholesalers won by a score of 9 to 8.

Others events were as follows:

100 yd. dash, men: Aug. Hartman, winner; W. C. Smith, donor of prize.

100 yd. dash, boys: Eddie O'Rourke; winner; H. Berning, donor.

Egg and spoon race, married ladies: Mrs. H. Kiessen, winner; St. Louis Seed Co., donor.

Hop, step and jump: Fred Alves, winner; C. A. Kuehn, donor.

50 yd. dash, young ladies: Martha Winter, winner; H. Berning, donor.

50 yd. dash, boys: C. Reitzen, winner; C. A. Kuehn, donor.

220 yd. run, young men: Aug. Hartman, winner; H. C. Young, donor.

Potato race, Ed. Fitzgerald and Miss Winter, winners; W. C. Smith and Geo. Angermueller, donors.

Ladies' bowling: 1st, Mrs. Theo. Miller, winner; A. Siegel, donor. 2d, Mrs. C. Beyer, winner; Mrs. C. Scholze, donor. 3d, Mrs. E. W. Guy, winner; Pachmann, donor.

In the gentlemen's bowling Charles Kuehn came in first with 195, Theo. Miller second with 185 and Carl Beyer third with 180. The booby prize was won by Frank Vennemann, his score being 26.

The rest of the evening was much enjoyed in dancing and listening to the good music. At this point Chairman Schoenle announced that the second event on the program had not taken place and a handsome paragon would be given to the best lady waltzer and fifty couples started in for the prize. The winner was Miss Minnie Beyers, her partner being Edward Gerlach. The younger element stayed until nearly midnight.

#### BUFFALO FLORISTS' CLUB.

The annual outing of the Buffalo Florists' Club will take place at Bedell House (Grand Island), on Wednesday, July 29th. Boat will leave dock at 2.30 p. m. The committee in charge is making every effort to have this year's outing go on record as being one of the best attended and best managed affairs ever held. As usual, an exciting ball game will be on the list, the East Side vs. West Side teams, and such other sports as fat men's race, tug-of-war, motor cycle races and many other

interesting events, which will be followed by dinner and dancing in the evening. Every member, together with their families and sweethearts are assured one grand time which they cannot afford to miss. Remember the date, July 29th. E. C. BRUCKER.

#### CHICAGO FLORISTS' CLUB PICNIC.

The Chicago Florists' Club had an ideal day for its picnic at Manilla Park, Morton Grove, July 19. The attendance was not so large as formerly. A neat program of the games, etc., was presented at the entrance and most of the performances came off as scheduled. The prizes were beautiful and many of them costly. A pleasant feature was the trip through the extensive greenhouses of Poehlmann Bros. This place is a model of neatness and well up-to-date. Mrs. Aug. Poehlmann hospitably opened her beautiful home to the ladies.

The annual picnic of the Indianapolis Florist Club was held July 23.

Niessen 23, Burton 5, was the baseball score for the return game July 19th at Wyndmoor, Pa. The Niessens were the hosts on this occasion, and turned the tables on their opponents by superior alignment and strategy.

A clam bake of unprecedented magnificence is under consideration by the New York flower and plant growers, to take place at a popular Sound resort in the near future. A. L. Miller is perfecting the plans.

At last New York is beginning to emerge from the obscurity of a third-rate bowling community and a line of alley artists is being brought forward to the firing line that will take the starch out of all past winners. If they can make the same showing at Niagara that they are doing at Thum's Alleys there will be no lack of excitement. Last week averages were made in four practice games as follows: Chadwick, 190; Donaldson, 183; Irwin, 157.

The outing of the Greek florists at Witzel's Point Grove, New York, on July 16, was an unqualified success in every sense. Five hundred tickets were sold for the occasion and there were nearly four hundred people in attendance. The proceedings included two dinners, Greek and American and various other kinds of dancing, games and speeches in English by Geo. D. Nicholas and others. There were no prizes but the athletic sports were just as good as though there had been, especially throwing the discus, running and jumping. A baseball game between the Greeks and Americans was won by the latter.

Corfu, N. Y., July 20, 1908.

HORTICULTURE Publishing Co., Boston.

Dear Sir:—Your paper brought even more answers this year and I hope you will draw a still larger trade for the next year. I even received an answer from Havana, Cuba.

Yours truly,

W. EHMANN.

# NEWS OF THE CLUBS AND SOCIETIES.

## CANADIAN HORTICULTURAL ASSOCIATION.

The eleventh annual convention of this association will be held at Niagara Falls, Ont., on August 19, 20 and 21, 1908, in the Clifton Hotel.

The program is arranged as follows:

### Wednesday, August 19th.

#### OPENING SESSION 2:30 P. M.

The Society of American Florists and Commercial Horticulturists will pay the convention a fraternal visit during this session.

Addresses of Welcome by the Mayor of Niagara Falls, Ont., and Superintendent of Queen Victoria Park.

Response by the President and welcome to the S. A. F. John Wicks, Montreal.

Response by the President of the S. A. F., J. H. Frenchay, New York.

Reports of Specialized, President, Standing Committees and special committees.

Discussion of President's Address.

Question Box.

#### SECOND SESSION, 7 P. M.

The Canadian Horticultural Association will pay a fraternal visit to the Convention of the Society of American Florists at the Cataract House, Niagara Falls, N. Y.

Illustrated Lecture by J. Horace McFarland, "How Florists May Aid in the Crusade Against Ugliness."

### Thursday, August 20th, 10 A. M.

"Raising Tomatoes," Professor W. S. Blair, Macdonell College, Ste. Anne de Bellefleur, Que.

"General Care of Private Greenhouses," William Wiltshire, Montreal, Que.

"Nursery Culture," John Myers, Oakville, Ont.

Call of place for next meeting.

Question Box.

Thursday afternoon, the delegates will be shown the beauties of Queen Victoria Park by Mr. Alex. Colman, Head Gardener.

### Thursday, August 20th, 7 P. M.

Discussion between Retailer and Grower, led by G. Gorrage, Toronto, Ont., replied to by W. J. Lawrence, Eglinton, Ont.

"Grapes Under Glass," Thos. Powtress, Pointe Claire, Que.

Unfinished Business.

Election of Officers.

Final Committee Reports.

### Friday, August 21st.

The Buffalo Florists' Club have generously invited all C. H. A. delegates to participate in the entertainment given to the S. A. F., including trip to Buffalo, games, etc.

## FLORISTS' CLUB OF WASHINGTON.

The last meeting of the Florists' Club, held at P. P. Kramer's was the largest meeting of this organization on record. The reason of it all was that President Kramer got out and hustled the best he knew how, and when the officials of a society or club do this there is invariably one result—success. This takes one's time and attention from business, family, etc., but when a man accepts office he assumes all this and it is "up to him" to carry it out. In Mr. Kramer's case it wasn't the "refreshments" or the Japanese lanterns alone that influenced the Washington florist to come out and make a good meeting, but the contagious enthusiasm of a president who rolls up his shirt sleeves and turns himself loose, determined to win.

## SUMMER EXHIBITION AT LAKE FOREST, ILL.

About thirty miles north of Chicago, close to the shore of Lake Michigan lies Lake Forest, noted for its beautiful summer homes as well as its permanent ones.

Two years ago the Horticultural Society of Lake Forest was organized

EMIL BOLLINGER

by Emil Bollinger, who was elected president, and still holds that office. H. C. Peterson is vice-president, Geo. Koppenhoefer, treasurer, and J. W. Scharfberg secretary. This progressive society is composed of one

THE BOLLINGER TROPHY

hundred and fifty members, owners of estates and gardeners, who work together to make it a success.

The second annual exhibition was held at Grand Art Institute, Lake Forest, July 15th, and was a credit to the society.

Among the most notable exhibits were the following: Collection of large evergreens from Pres. Bollinger; hot-house grapes from R. T. Crane;

foliage and decorative plants, fruiting trees in pots, etc., from Mrs. A. B. Duck; hardy perennials and annuals from Jas. Viles, Mr. Woolley of Glenview, Mrs. H. R. McCauley, Mrs. Jas. Hayworth, Vaughan's Seed Store and others; vegetables from Cyrus H. McCormick, Chas. Hutchinson of Lake Geneva, Wis., F. L. Swift, Mrs. Isham of Lake Geneva, C. H. Fitzhugh and Ernest Hamill; sweet peas from John Pisie, Jr., and flowers from the school children. Lager & Hurrell of Summit, N. J., orchids, and A. T. Boddington, New York, seeds and bulbs, were represented by creditable displays of their specialties. The society's prizes were in the form of medals and there were special premiums from President Bollinger, R. Douglas' Sons' Nurseries, of Waukegan, and others, the president's trophy being a beautiful silver cup for the best basket of outdoor flowers.

The flower judges were William C. Egan of Highland Park, E. A. Kanst and W. N. Rudd of Chicago; and on vegetables, Robert J. Sampson and Axel Johnson of Lake Geneva and C. J. Reardon of Hinsdale.

The Horticultural Society of Lake Forest meets regularly on the last Wednesday of each month. It usually has a speaker from outside its own territory, and the meetings are interesting and well attended.

President Bollinger, whose portrait we present herewith, is a native of Switzerland and is superintendent of the Byron L. Smith estate. He has served four years on the Board of Education and has just been elected for two years more. The organization of the society is said to have been the fruition of fourteen years' endeavor on the part of Mr. Bollinger.

## MASSACHUSETTS HORTICULTURAL SOCIETY.

The annual sweet pea exhibition held at Horticultural Hall, Boston, on July 18 and 19, fell short of the standard owing to the long continued hot and rainless period of weather which preceded it. The peas were really better than there was any reason to expect under such trying conditions. Edwin Jenkins, of Lenox, was the largest winner of first prizes, Thomas Howden, of Whitinsville, coming next. Other winners of prizes in the sweet pea classes were Joseph Thorpe, W. A. Riggs and Col. Fred'k Mason. Among the most interesting flowers and plants shown were the following: An exhibit of new lilies from North China and a variety of herbaceous plants from R. & J. Farquhar & Co.; hardy herbaceous flowers from Blue Hill nurseries; Harvard Botanic Garden, a superb collection of gloxinias beautifully arranged; phloxes and herbaceous flowers from several contributors. Fruit and vegetables also showed the stress of the unfavorable season. Col. Frederick Mason's group of vegetables arranged for effect was excellent. Gooseberries were more of a feature than customary, J. S. Chase, W. G. Kendall, Wilfrid Wheeler, State Hospital at Taunton and W. A. Riggs all being creditably represented. W. Heustis & Son showed cabbages of enormous

size and the onions from W. J. Clemson, J. O. Christenson, gardener, were the best ever shown here. The Boston Mycological Club had an interesting display of fungi.

#### DETROIT FLORISTS' CLUB.

The regular meeting last week was held out of doors at the secretary's residence. The meeting was well attended and many questions of local interest were discussed. The day for the annual summer outing was decided upon and consequently all the members with wives and sweethearts will embark for Bois Blanc on July 27. After a lengthy discussion Mr. J. F. Sullivan was induced to consent to be a candidate for secretary of the S. A. F.

FRANK DANZER.

#### NEW ORLEANS HORTICULTURAL SOCIETY.

The annual meeting of this society was held on July 16. Richard Steckler was elected president, C. R. Panter secretary, John Elden, treasurer. A vote of thanks was tendered the retiring president, Charles Eble. Following the meeting the 23rd anniversary dinner took place.

#### CLUB AND SOCIETY NOTES.

The Newport Horticultural Society at their last meeting voted to hold their September show on September 12, 13 and 14.

The Florists' Club of Washington will hold a four days' chrysanthemum show, beginning November 9. The committee in charge consists of George Cooke, W. F. Gude, George Shaffer, Charles McCauley and Z. D. Blackstone.

The thirty-second annual meeting and exhibition of the Georgia State Horticultural Society will be held at Cornelia, Ga., on August 12 and 13.

The Lenox (Mass.) Horticultural Society will hold two flower shows this year, one on August 15 and the other early in November.

#### MOVEMENTS OF GARDENERS.

William Creighton, formerly at Sykesville, Md., is now at Rowayton, Conn., with J. Sherman Hoyt.

F. C. Searles, formerly with E. G. Asmus at Closter, N. J., is now with the Pittsburg Rose and Carnation Co.

The preachers will now have a chance to catch up with the times. The Massachusetts Agricultural College will devote two weeks of work to their especial needs during August, 1908. They will be taught by expert instructors who will be able to show them what modern agriculture means in this world of industry; what the social organization of country life really is today, and what the rural and working classes are actually thinking about. The progressive preacher who attends this school will not only get a new point of view but will get it put up in a vacation capsule as he enjoys the pleasant outdoor life on the college farm at Amherst.

#### PERFECTION IN PETUNIAS.

About July 15th of each year the Dreers commence their hybridizing of the petunia for seed purposes. The methods and system employed were explained to the writer recently by Frank C. Berz, who has charge. Great care is taken to keep the various colors pure, and the rows of each shade are carefully rogued. Last year there was a partial failure of the dark shades and some plants had to be used unavoidably for hybridizing that showed a slight tinge of some other marking, in order to even partially supply the demand for this seed. This year the plants are thriving better. Every plant is carefully manipulated by hand, the pollen of one double flower being used on the stigma of the single flower previously emasculated, after which the stalk is tagged and the resultant seeds carefully gathered. Tedious and expensive, but it is the only way to approach perfection in this plant. Some five thousand plants were hybridized last year and for the present season more than that will be utilized if possible. As is well known, seed saved from the most carefully hybridized flowers produces but a small percentage of doubles, but the singles of the strain are of fine form and substance. The weaker seedlings are the ones to be nursed most carefully, as they produce the finest double flowers. The white section comes the truest from seed. The double flowers are almost invariably beautifully frilled and curled, most of them measuring 3-1-2 and 4 inches across. Representatives of the firm visit the principal flower shows here and abroad, and wherever a good strain occurs it is secured and tested at River-ton. By this means the strain is having constantly added the best blood obtainable. The plain-edged sorts have been discarded of late years as the frilled and fringed varieties are

so much more beautiful. The double section has risen to the dignity of named varieties—sold as plants only—among the best of these being: Modesty, delicate mauve, veined reddish crimson; Caprice, pink white, mottled with reddish violet; Snowball, a finely fringed white; and Fairy, soft solferino, occasionally marked white. For hanging baskets, window boxes, etc., singles and doubles are both excellent the variety known as Howard's Star being one of the best in the latter connection.

G. C. WATSON.

#### MESSRS. LEMOINE'S DEUTZIAS.

(G. T. Grizman in *Revue Horticole*)

Victor Lemoine & Sons have sent out this season among their novelties a series of remarkable varieties of deutzias. The genus *Deutzia* has had its best improvement through the patient and continued hybridizations of Mr. Lemoine, and a history of these crossings which have enriched our gardens so much may prove interesting.

In 1891 Messrs. Lemoine crossed *Deutzia parviflora* with the *D. gracilis* and obtained *D. Lemoinei*, which they improved again in the varieties *Compacta*, *Boule de Neige* and *Avalanche*, all remarkable for the profusion of their flowers.

After the appearance of *D. discolor purpurescens*, introduced by the "Muséum," and distinguished by the rose tint of its buds and the exterior of its flowers, Mr. Lemoine crossed it with other species and gained also a series of very interesting hybrids inheriting in a pronounced degree the rose color of *D. discolor purpurescens* and at the same time superior in robustness to the *D. gracilis* crossings. The *D. gracilis* hybrids under the names of *Venusta*, *Multiflora* and *Rosa* and the *D. discolor* hybrids *Floribunda* and

*Grandiflora*, proved to be absolutely hardy shrubs.

*D. discolor purpurescens* was also used to enrich the circle of their first hybrids, the *D. Lemoinei*. This series produced admirable varieties such as *Boule Rose* and *Fleur de Pommier*, the twigs of which are covered from base to top with racemes of from twenty to thirty flowers, bright rose in color, or rose tinted, and the under sides still more colored.

*D. discolor purpurescens* was also crossed with *D. parviflora*. From the plants out of this crossing they kept only one, *D. Kalmiaeflora*, which produces in the middle of May grand flower-heads each of ten flowers, two-thirds of an inch in diameter, bright pink in color and tinted darker on the edges.

Messrs. Lemoine also used in the hybridizations *D. corymbiflora*, a species sometimes known as *D. corymbosa*. The crossing of this with *D. parviflora* produced *D. myriantha*. This plant is very robust and flowers abundantly about the tenth of June. Its flowers are white and as large as those of *D. Lemoinei*.

*D. scabra* and *D. Sieboldiana* were also crossed. Out of *D. scabra* and *D. discolor grandiflora* (hybrid), they obtained curious plants, quite new and large, which merit detailed description. *D. discolor stellata* is a very elegant shrub, not over three feet high, forming a graceful head and covered with small serrate foliage; it blooms at the end of May. The flowers are medium large, bright rose and red rose.

*D. discolor carnea* is a thick clump, not very tall; the foliage medium and deep green; long twigs covered with twenty to twenty-five well-opened flowers about half an inch wide with regular petals, red and pink underneath. The flowering season often lasts for months, thanks to the appearance of new buds after the first crop has faded. *D. discolor lactea* has bright foliage and large flower heads of milky white.

The crossing of *D. gracilis* with *D. Sieboldiana* furnished a series of extremely interesting plants, on account of their flowering qualities, elegant forms and hardiness, namely:

*D. gracilis fastuosa* with very bright foliage and twenty to twenty-five milk white flowers in a head.

*D. gracilis candelabrum* has long twigs inclining towards the ground. The twigs are dark and foliage green and dark on the edges. The flowers are large, having often six to eight petals, color creamy white, passing into milky white.

**Note of the Translator.**—Of this last variety the *Hebdomada* shows an elegant photograph which will convince anyone who sees it of its superiority to our common glaucous ones. We still use in such large quantities and which has the objectionable feature of being too stiff or "climpy" for most situations; the *D. gracilis candelabrum* buds gracefully like a weigela or hydrangea at first. These beautiful shrubs are much superior to *D. gracilis*, not only because of their vigor and easy culture, but also on account of their great profusion of flowers and graceful contour. It is altogether a new race and one that has most brilliant promise.

— *Blacken*

News from Ghent indicates that azaleas will be rather plentiful, and there will be plenty of large sizes available this year.

## FLOWER PICTURES AT THE PARIS SALON.

During our recent stay in Paris we passed a morning at the Salon paying special regard to those works of art that portrayed fruit and flowers. We afterwards found in the Flower Show of the National Horticultural Society of France an art gallery containing a much larger collection of flower pictures than were exhibited in the Salon and in most cases works of a character to please a horticulturist to a greater extent than those at the Salon.

In point of number the flower pictures at the Salon were only about a fourth of those shown at the Paris Spring Flower Show; but while the latter was only open for a week the Salon, of course, is accessible to the public for a much longer period. As it is now the season of the year when American visitors come over to Europe in large numbers, we have thought it of service just to give a few brief indications of those pictures that might possibly interest such as are of a horticultural turn of mind.

Going up the grand staircase and beginning with the first room on the right and working our way right round the first floor to the starting point, we came across the following in the order given: 973, *Cytise et iris*, a very effective picture depicting purple iris and cythus nicely arranged in a Chinese pot. 973, *Pavots, doubles*, a pretty representation of white, pink and other poppies. 1085, *Bouquet de roses*, a picture of large dimensions showing pink and white roses in a blue earthen vase standing on a stone shelf. 916, *Pavots, rich crimson and other poppies*. 934, *Roses, in a vase*. 1166, *Fleurs de Nice*, rather a taking picture depicting carnations, lilac, roses, violets and mimosa. 951, *Fleurs*, an imposing painting of yellow and bronze Japanese chrysanthemums in a big stone ware vase on a step and a blue bowl of yellow roses. 1021, *Fleurs*, a vase study. 1510, *Au parc de St. Cloud*, a flower garden scene, in which white roses and other flowers are conspicuous in the foreground. 426, *Fleurs, chrysanthemums in a jug*, chiefly Japanese, with a few small flowered varieties. 1041, *Pivoines*, a large and effective picture, a huge vase containing peonies, others lying on the ground. 1138, *Un coin d'Atelier*, a corner showing an artist's palette with flowers in a vase close at hand. 100, *Bouquet de Pavots*, a rich painting of poppies in a dull green vase. 2789, *Jonquilles*, a water color, with the flowers arranged in a green art vase, some in a tub, a neat little bit of work. 2009, *Effet d'automne a Villeneuve l'Etang*, also a water color, a charming little water scene. 2265, *Roses et hortensias bleus*, a delightful piece of work showing the flowers arranged in a blue vase on a carpet. 2654, *Pavots*, another water color, a lovely delineation of blooms of *Papaver somniferum*. 2264, *Roses d'Ispahan*. 947, *Panier de roses*. 1042, *Fleurs et fruits de la*

*Cote d'Azur*, lemons and oranges and a blue earthenware vase full of the various flowers of the district. 1216, *Le Jardin rustique*, an odd corner in a country garden, some fine heads of hydrangeas in flower. 1320, *Le vieux banc*, an old stone seat by the water side. In the foreground are flowers, chrysanthemums in the distance.

We pass over several others as being less interesting and next notice 1349, *Coin de serre*, pots of white and pink azaleas, and a few yellow roses lying about. 1219, *Lamare aux grenouilles*, a pretty water bit with green rushes in foreground, yellow water lilies, background of deep foliage. 1537, *Marchande de fleurs*, a large painting representing an old woman under a large umbrella selling chrysanthemums in baskets. 2060, *Roses et violettes*, a water color. 2693, *Roses et camomiles*, also a water color. 2717, *Fleurs et fruits*, a basket of grapes and peaches and a green earthen jug full of roses. 2054, *Chrysanthemums*, water color, Japanese blooms somewhat wanting in color. 2146, *Roses et violettes*, an attractive little water color. 3292, *Hortensias*, a pastel showing blue and pink hydrangeas. 1599, *Fleurs d'hiver*, chrysanthemums in a jug. 1276, *La petite poete*, standard red and yellow roses, with iris below. 1576, *La haie fleurie*, Japanese varieties in a garden pot. 1370, *Les fleurs*, hydrangeas. 1318, *Etang fleuri*, a pretty water scene of water lilies, rushes and reeds. 161, *Le vieux puits*, a large composition showing an old well around which are pale pink hollyhocks. 2788, *Tulips*, a water color. 2655, *Pivoines*, a water color showing white, pink and red peonies and a few other flowers. 158, *Bouquets de roses et gerbe de lilas blanc*, a handsome picture of roses and lilac in a brass vase. 385, *Les roses blanches*. 634, *Roses Miss Milly Cream*. 1822, *Les pivoines*. 2575, *Roses*, a water color. But our space is exhausted and we can only say further that following along the line indicated we note 2724, 2516, 2517, 2548, 2260, 2085, 2367, 347, 41, 173, 1815, 678, 74, 876 and several others that will all more or less interest the horticultural visitors to the Paris Salon.

C. HARMAN PAYNE.

## CATALOGUES RECEIVED.

*Handy Hand-Book of Greenhouse Material*, just issued by the Lord & Burnham Company, is a very complete illustrated catalogue of every device and fitting, large or small, which go to make up the modern greenhouse, piping, heating and ventilating included, as well as benches, gratings, sash, and all the tools needed for repairs at short notice. The materials are all classified, grouped and indexed for ready reference. It is a handy hand-book, in fact. Any reader of *HORTICULTURE* can have a copy by writing to Lord & Burnham Company. Accompanying it is a hook enclosed in a small envelope, on which to hang the book.

M. Herb, Naples, Italy.—General Catalogue of Bulbs and of Seeds for Autumn Sowing. This is really a remarkable catalogue, the contents being in three languages, English German and French.

## SOME PEONY OBSERVATIONS.

The season has been a very good one with most growers. The demand is more and more for the very finest sorts. The ordinary stuff will be a very heavy glut in a few seasons. There are far too many sorts that possess little merit; this refers just as much to some "novelties" as the old timers. Again there are many old timers that possess such exceptional merit that I cannot understand why the older growers have overlooked them.

Some growers have not had a good crop for three seasons. Quite a few causes contribute to this end. The peony in a great degree is a bi-annually perennial, that is, it will store up capability to produce a full crop, the next season it is disappointing. In old clumps this does not seem so much the case as with smaller ones, some sorts more than others, others apparently not at all. Many sorts can be cut almost devoid of foliage and the next season they are very fine; others under such treatment almost perish.

Many of our sorts were planted in 1902, 1903 and 1904; some had grand blooms the following spring; in some cases we have not had typical ones until this season but this season they have repaid us for our patient wait with 18 to 36 giant blooms with 7 to 9 inch diameters, surprising magnificence, very well worth all the time and patience waiting. This leads me to believe that many sorts have been passed as of no merit because although established not developed.

Quite a few sorts are variable in their colorings and marking annually, thus adding some to the confusion in nomenclature and descriptions. Far too many sorts have no particular merit, especially from the cut flower or landscape viewpoint; many are poor color, lack freedom, etc. Some seemingly will come blind through quite a number of causes. I feel that many failures are brought about by one not understanding some details of culture. I have noticed plants of Whitleyii to come into full bloom annually whilst other plants apparently just as large or larger, in the very best of soil, are a failure. On my own grounds I have noticed the same thing but by asking many customers how they cared for their plants then reviewing my own culture, etc., I found out that in nearly every instance of failure, we all had committed the same crime. Coupled with this several critical growers have had a failure for the past three seasons, all laid at the door of the Frost King. I cannot believe that frost has had much to do with it as in each of the past three seasons we have had very fine bloom on most of our sorts. One season we had a severe two-day freeze with drying winds; the stems were 18 inches or more high and very soft, while many stems were split open from the effects of the 10 degrees of frost. When June came we had a very fine crop of bloom. Some other growers with much less cold had a complete failure. From all these causes and the various experiments and observations I am fully convinced that wrong methods of culture is the cause of the failures generally attributed to "late frosts." Some sorts seemingly stand any sort of ill treat-

## A CAULIFLOWER SEED PLANTATION.

Island of Anager, Near Copenhagen

ment; others are exceedingly sensitive to the least wrong feature. The Lady Bramwell type seemingly is more sensitive to wrong treatment than others, but from my observations in hybridizing I think this type is the product of Whitleyii parentage so that point may more than ever endorse my observations as to wrong treatment, etc.

Quite a few of my customers were dissatisfied with some sorts that I advised them to buy but after asking certain questions and advising my methods of culture they invariably write "they are grand," etc. The past season nearly every one of our 1200 sorts gave us grand blooms on plants with 12 to 36 blooms, in good soil, good culture, but out of the list we have selected about 200 that we consider worthy of increase; the other sorts we shall discard all but two plants of each for testplot purposes. Out of about 300 newer sorts I will retain not over 15 as being AAM in every way. Some foreign growers do not send the same sort for a variety. We know of one case with at least eight importations with eight different ones received. Out of about 100 sorts, new and old, we have received Andre Lauris under ten different names, Charita as many, and older sorts under new names, but I may add that this is also the case in other items. This season we imported a lot of gladioli and got one sort under three names, Brechleyensis for Hollandia, etc.; dahlias and other items all just as badly mixed and wrongly named. This same condition also exists with a number of growers on this side. I paid \$10 for a root of Milton Hill which proved Ponsu Alba, \$5 per root for John Richardson which is Andre Lauris, etc. One trouble with many growers is that they are not up on nomenclature except on a very small list of sorts and have little matter of an authoritative nature on peonies.

As a few incidents: Sara Bernhardt (Dessert 1895); this is La France (Polman-Mooy about 1870). Mr. Des-

sert found this in Dessert & Mechin's collection. It is our very earliest Chinese sort. Last season we cut it with the first officinalis sorts; usually we cut it about the third day after the first opening officinalis blooms, but before we have the officinalis cleaned up La France is done. Reine des Francaise often brings this sort but this is a very different thing under its correct name.

I find that many growers striving for the limit of capability of development are overfeeding their peonies. A peony, while very vigorous, is also very sensitive and cannot stand overfeeding. "Rosette" is symptomatic of overfeeding; the "wilt" disease is the same thing in the "last stages." Remove the cause and it disappears. When this disease appears the best remedy is to remove as much of the over-rich soil and replace with very poor soil; also give each plant a good sprinkling of slacked lime or remove the plant entirely into poor soil. Remove any damaged root and lime the root, then plant into poor soil but keep the plants well watered for a week. Thus they may be dug up at any time without harm.

We plant our peony ground to potatoes or corn, previous to planting peonies, first preparing the ground and sowing to rye early in the fall. We then manure it very heavily in December with fresh manure; by plowing early and planting to corn it gets the plot in the very best of shape so that there is very little loss by plants dying or getting diseased and any plants that are bought that have any trace of disease get a good dusting of lime which helps to eliminate it. After the plants have been growing for two or three years we give a very good dressing of manure over the soil about December or during the growing season earlier. Where a large tract is planted for cutting it will be good to sow oats about August 15, then put the manure on during January; this will put the ground in excellent condition in the spring. C. BETSCHER.

### FOREIGN NOTES.

#### Exhibition in Turin.

An International Industrial Exhibition is announced to be held in Turin in 1911 on the occasion of the 50th anniversary of the proclamation of the Kingdom of Italy. In connection therewith will be held three horticultural shows. The first will be in May and will consist of decorative garden plants, greenhouse plants, cut flowers and floral decorations, market garden products, fruit, colonial grown plants, etc. The second show will be held in September. The classes will be chiefly for garden decoration, greenhouse plants and market garden culture. The third show towards the end of October will be for fruit, vegetables, flowering plants, plants suitable for home decoration, and cut blooms.

#### A Newspaper Flower Show.

Our London contemporary, "The Garden," is organizing a special flower show for its readers. It is somewhat an original idea for a horticultural journal but will no doubt be keenly taken up. The show will take place in the Royal Horticultural Society's Hall, Vincent Square, Westminster, on Wednesday, July 29th. The schedule comprises 38 classes divided into three main divisions, viz., 22 classes for flowers, eight classes for fruit, nine classes for vegetables. These are for amateurs only.

In addition there are classes open to everyone. Eighteen classes for flowers, four classes for fruit, six for vegetables, and six classes for ladies only—in all a total of 72 classes.

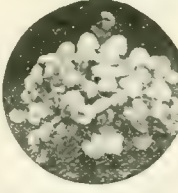

Prizes to the value of \$500 and medals are offered. Exhibitors must send in signed coupons cut from The Garden to show their bonafides.

#### French Horticulturists in London.

A party of French horticulturists, members of the National Horticultural Society of France, have been visiting the sights of London during the week beginning June 22 and ending the 29th. The party included M. A. Viger (president), M. Abel Chatenay (secretary), M. Maumene (editor La Vie a la Champagne), M. Nombrot, M. Mulnard of Lille, M. Cayeux of Paris. M.

Guillot of Lyons and about 100 others. The party visited the fortnightly show of the Royal Horticultural Society, June 23, and were entertained by the council of the R. H. S. to a reception and light lunch. Visits were made on the following days to the flower show at the Franco-British Exhibition, to Kew, Windsor and the leading parks and nurseries around London. The weather during the whole time was simply superb.

## FISHKILL.

Serenely reposing at the foot of the stately Fishkill mountains and smiling at its neighbor, Newburgh, a mile away on the other shore of the broad Hudson, snuggles the historic town of Fishkill—or Fishkill-on-the-Hudson, as some of its fashionable residents prefer to call it.

Apart from its scenic attractions, Fishkill offers two prime inducements to the horticultural traveller to tarry; one is our genial friend, Benjamin Hammond, secretary of the American Rose Society, whose factory for paints and insecticides stands almost next door to the railroad station; the other is the nurseries and greenhouses of Wood Bros., reached by a trolley car which, after several miles of upward meandering to and fro, deposits the visitor within a short walk of his destination. There are few rides more romantic than this. Quaint pastoral scenes alternate with modern luxuriousness and style, trumpet vines clamber over trellised porches, while hollyhocks, hemerocallis and such old-fashioned things flaunt gayly in ancient cottage gardens, as the trolley car speeds along through shaded thoroughfares, the conductor thereof contributing to the contrast between rural simplicity and modern society customs by possibly taking aboard a tub of butter for delivery at the wayside grocery. On the right rise the wooded mountain slopes; on the left, through the chestnuts, oaks and locusts, comes an occasional glimpse of the majestic river and the blue crags of the enchanted Catskills beyond, where Rip Van Winkle wandered. But here our romancing is cut short by the spectacle of a group of majestic elms, brown as though swept by fire, overwhelmed by that abominable scourge, the elm leaf beetle, in defiant disregard of the proximity of the Slug Shot man!

Wood Bros.' place is located on a fine upland plateau. Here are acres and acres of perfectly trained nursery stock and bedding material planted out, and forty greenhouses which by a skilful system of crop rotation are never idle, filled at the present time with thrifty young roses, chrysanthemums, and other seasonable stock. Wood Bros. have an enormous and fast increasing plant shipping trade, particularly strong throughout New England and New York state, and one does not have to look far to find the reason why, for painstaking industry is evident at every turn, and better cared for, weedless fields or cleaner greenhouse benches cannot be found anywhere.

Before leaving Fishkill the visitor will not fail to take a ride to the top of Mt. Beacon, 1400 feet above the river. The ascent is by an incline railway, the steepest of its length in the world. The view from the Casino at the top is one of surpassing beauty. Below lie the villages of Fishkill and Matteawan, and nearly fifteen miles away up the Hudson the outlines of the great Poughkeepsie Bridge are dimly seen. The crests of these hills were utilized for signal fires during the Revolutionary struggle, hence the name of Mt. Beacon. On the easterly spur stands a commemorative monument of stone erected by the Daughters of the American Revolution.

## Large Profit

is the reward of the grower who supplies the necessary elements of plant food to his plants, and the profit is assured if the application of commercial fertilizer contain from 9 to 12 per cent. of

# POTASH

It has been demonstrated beyond all question, that the plant food which particularly makes for hardy stock, wealth and richness of bloom and fruit is POTASH.

Send for our practical books on fertilizing, prepared by experts and invaluable to everyone interested in Horticulture. Sent free of cost upon application.

## Seed Trade

The L. L. Olds Seed Co., of Clinton, Wis., contemplates removal to Madison, Wis., in September.

The Cumberland Seed Company has been incorporated to do business at Nashville, Tenn. W. B. Ewing is president of the company.

H. J. Hartmann, of cauliflower seed fame, of Copenhagen, Denmark, arrived in New York on July 20 and expects to stay in this country till end of August.

Chas. M. Jackman and Geo. W. Kerr have joined the Burpee forces. Both gentlemen are from the other side and are experienced in the seed business. Mr. Jackman hails from the well known house of George Jackman & Sons, Woking, Surrey, famous the world over in the clematis field. Mr. Kerr gained his early experience with Dobbie & Co., Rothesay, and was later manager of the nurseries for the Baker establishment in Wolverhampton. We congratulate Messrs. Burpee and have no doubt that the fame of the "Best Seeds That Grow" will be maintained and extended with these new affiliations.

### CATALOGUES RECEIVED.

Teutonic, N. Y.-Sh'mp'ton...Aug. 5

A. Leuthy of Roslindale, Mass.,  
sailed on a business trip on S. S. La  
Provence for Havre, Wednesday, July  
22.

David Lumsden, who has been super-  
intendent of greenhouse and grounds  
at the New Hampshire State College,  
has been appointed assistant professor  
in horticulture.

Prof. B. S. Pickett, formerly assistant  
in horticulture with Prof. J. C. Blair,  
at Urbana, Ill., takes the place of Pro-  
fessor of Horticulture at Durham, N.  
H., as successor to Prof. H. F. Hall.

Prof. H. F. Hall has resigned his  
position as Professor in Horticulture  
at Durham, N. H., and, as a member  
of the firm of Rane & Hall at Waban,  
Mass., will devote his time to raising  
fruit and vegetables under glass.

#### PERSONAL.

Visitor in Cincinnati: Ernst Oechslein, of Chicago.

Visitor in Pullman, Ill., Miss T. A. Moseley, of Kansas City, Mo.

C. A. Alles, manager for Wieter Bros., Chicago, is rustivating at Kenmore, Ill.

William Perkins, of Exeter, N. H., florist, is visiting his old home in Rugby, England.

C. A. Sigle, of Youngstown, O., sailed from New York on July 18 to visit relatives in Germany.

George Burrault, orchid collector for Julius Roehrs Company, has arrived in New York from Costa Rica.

Prof. Charles S. Sargent, of the Arnold Arboretum, expects to sail for Europe about the middle of August.

Visitors in Boston: W. C. Langbridge, representing Jerome B. Rice, Cambridge, N. Y.; Ed. Roehrs, Rutherford, N. Y.; Judge C. W. Hoitt, Nashua, N. H.

Charles Commeau, formerly on the Arthur Little place, is now at the Whiting estate, Galloupe's Point, Swampscott, Mass.

Visitors in Chicago: Harry Balsley, Detroit, Mich.; Harry Bock, Burlington, Ia.; W. G. Matthews, Dayton, O.; Chas. McCauley, secretary Florists' Club of Washington, D. C.; H. E. Philpot, Winnipeg.

#### BUSINESS CHANGES.

J. W. Eger, at 511 Union street, Schenectady, N. Y.

J. M. Holland has opened a new retail store at Oakland, Cal.

D. Freudenthal has closed his store at 11th street and Grand avenue, Kansas City, Mo.

Frank Huntsman has disposed of his interest in the firm of Huntsman & Co., Cincinnati, to his partner J. F. Pogue who will conduct it under his own name.

George H. Moores has leased his greenhouses at Wilmington, O., for a term of three years with the option of buying, to H. E. Mitting, who a number of years ago lived in Chicago, but is back this spring from Columbus, Miss., where he had charge of a large range of glass. Mr. Mitting is a brother of A. Mitting, the Calla specialist of Santa Cruz, Cal.

#### NEWS NOTES.

La Tribune Horticole, issue of July 4, contains a most beautiful colored plate of Iris Kaempferi var. Senjo No Hora.

The florists of Albany, N. Y., have signed an agreement to close their stores on Saturday afternoons during July and August.

On Sunday, July 12, fire caused about \$2500 damage to the stock of Frank Neisbert Co., manufacturers of artificial flowers, at 39 Barclay street, New York.

H. Bayersdorfer & Co., florists' supplies, located at 1129 Arch St., Philadelphia, have been losing goods through the theft of some of their employees.

The contract for building greenhouses and instruction rooms at the Massachusetts Agricultural College was not awarded, all of the bids submitted having exceeded the amount of the appropriation.

Charles Derynck, who since 1902 has rented the Smith greenhouses on St. Lawrence Boulevard, Montreal, purchased them in April and is gradually remodelling and rebuilding. This is the oldest florist's establishment in the city, having been started by David Smith sixty years ago.

Springfield, Mass., is in state of wonderment over the sudden descent of myriads of white moths on the electric light poles and wires of that city. The moths are regarded by local experts as "rare specimens which have not visited the vicinity since 1862." In our humble opinion the snowy visitor is nothing other than the notorious browntail moth. Around Boston we have learnt the meaning of these "July snow storms."

The range of greenhouses at Chicago originally known as the Garfield Park Rose Co.'s plant is to be torn down. The ground has now become too valuable for that purpose. These greenhouses were built in 1885 by C. C. Collins and passed into the hands of the Peck estate the following year. In 1887 they came under the control of C. Frauenfelder and remained so to the present time. Mr. Frauenfelder has a fine retail store on Madison St., and is now enlarging and making extensive improvements. Mr. Frauenfelder es-

tablished this business in 1884 and is the pioneer florist of the West Side. He will have a fine place when completed.

#### PLANT TRADE IN CHICAGO.

The usual summer quiet is on but there is a fairly good demand for Boston ferns, asparagus, rubbers, araucarias and aspidistras. There are practically no blooming plants in the market. Chrysanthemums are coming on finely. Growers are working up a good stock of pot chrysanthemum plants, also cyclamens, Primula sinensis and obconica, Lorraine begonias, poinsettias, etc., for the fall and winter trade.

#### INCORPORATED.

Aaron Miller & Sons, Milton, Ont., as Milton Nursery Company.

Van Holderbeke Nursery Company, Spokane, Wash. Capital \$60,000.

Trepel's Flower Stores, Brooklyn, N. Y.; capital, \$10,000; directors, Adam Trepel, Samuel Meshkin and Abraham Kommel.

Co-operative Flower Growers' Association, Mineola, N. Y.; capital, \$10,000; directors, Henry Weston, Hempstead; Charles Weber, Rockville Centre; W. G. Badgley, Chatham, N. J., and John Wilson, Short Hills, N. J.

## FLOWER MARKET REPORTS

**BOSTON** Local business is exceedingly quiet and the summer resort trade has not been heard from thus far. The best roses are still Carnot and Kaiserin. Killarney is very abundant, color rich but substance lacking. Bride and Bridesmaid are very insignificant as a rule and are not wanted. Anything of fair quality in American Beauty sells all right. Carnations are practically out for the time being and asters are beginning to come along to take their place. Prices stationary.

**BUFFALO** The first part of previous week was very quiet; in fact everybody being sleepy, trade was at a standstill, stock quite plentiful and nothing at all doing in the flower line. Vacations and fishing trips are the talk when a gathering is in order. On Thursday there was an "awakening"; stock was not plentiful and the demand constantly grew for carnations, roses, etc., and at the end of the week everything was cleaned up. The cemetery florists took everything in sight, reporting floral work in heavy demand, and everyone on the hustle. Asters are now coming in and lilies, lily of the valley, gladioli, sweet peas and greens are selling somewhat better than heretofore.

**CHICAGO** There is no startling changes in the Chicago flower market. Opinions vary somewhat as to the sales compared with those of last year. The majority feel that there is little change. During the early part of the week trade was more active than at any time the previous week. Stock in some respects is better than could be expected in July. Some particularly fine white carnations are to be seen and Lawsons are also good for midsummer. Beauty roses are lengthening out. Asters are slowly coming in and have short stems. Peas and gladioli are holding fairly well. The cooler weather has freshened up stock wonderfully.

**INDIANAPOLIS** Trade now has fairly settled down to midsummer conditions, with little complaint to be made. The usual line of mid-

summer roses is seen, although somewhat the worse for the heat. Much the same may be said of carnations. Asters are slow in coming, the stems short and blooms inferior. Auratum lilies are abundant and about the only lilies on the market at the present time. American Beauties from young plants are now coming in, some showing stems two feet long. Long stems are to be had in very limited quantities. Gladioli are good property now, and there is a good supply.

**NEW YORK** Roses and carnations are shortened up materially, the latter almost to the point of extinction. There are lilies and gladioli in great abundance, but there is no demand of any consequence for these or anything else. Asters are coming in moderate supply. Cattleyas are very scarce. The wholesale establishments are closing early every day now.

**PHILADELPHIA** Carnations are scarce and inferior and the expected influx of asters has not materialized. The early asters have been almost a failure for want of rain, and unless the dry spell is broken soon the second earlies will be a disappointment also. American Beauty roses are not very good but meet with ready sale. Kaiserins and Killarneys from local sources are showing up unexpectedly good. Not many orchids around but enough for the demand. Lily of the valley is pretty fair quality. Speciosum and auratum lilies are seasonable items for design work. The speciosums are cut short as a rule so as to save the undeveloped buds. There is a glut of common water lilies but the fancy varieties are better stock and bring readily three and four dollars per 100. Sweet peas are hardly worth mentioning—their glory has departed.

### OBITUARY.

The wife of A. W. Cleveland, Rensselaer, Ind., died on July 11.

Mrs. Pahud, wife of Alfred Pahud, florist of Indianapolis, Ind., died on July 6, aged 53 years.

### PUBLICATIONS RECEIVED.

Bulletin No. 17, of the Nebraska State Horticultural Society for May, 1908. Comprising notes from the Nebraska Experiment Station of York, compiled by C. S. Harrison.

"Mushrooms, and How They Can Be Cultivated Profitably" is a very practical treatise on the subject of mushrooms and mushroom spawn, issued by the proprietors of the Twyford Abbey Mushroom Farm, England. Anyone wishing complete instruction in the growing of mushrooms can find it in this pamphlet.

### FREELY GIVE.

When you have a thought that's cheery  
Pass it on.  
It will surely aid the weary;  
Pass it on.  
Give it freely. Do not keep it  
Till your measure full, then heap it  
Later you will surely reap it  
Pass it on.

When you have a thought that's healthful,  
Pass it on.  
When you have a thought that's wealthful,  
Pass it on.  
Give it quickly, while it's vital.  
Give it with full right and truth.  
Give it, never seek requital.  
Pass it on.

Kindly given thoughts will flourish,  
Pass them on.  
They will starving people nourish;  
Pass them on.  
Then if rightly they're directed  
They will surely be reflected  
And a harvest unexpected  
Will return.

M. G. Kains, in New England Homestead.

### Bostrom Improved Builders' Levels and Farm Levels

For Park, Cemetery and Landscape Gardening use, take the place of expensive Engineering Instruments. Simple in construction, easily adjusted, more substantial and less cumbersome than the more elaborate and complicated instruments. Practical, up-to-date instrument that any one can use. Write for descriptive circulars and be convinced that this Level is necessary to complete your outfit. Builders' Level \$25.00. Farm Level \$15.00.

Is Your Name In The Above List? If Not, Why Not?

# The Latest and the Best in Hot Water Heating

## AN AUTOMATIC CIRCULATOR

(Patent Applied for)

Something which works while you sleep. No anxiety as to whether the power for forced circulation is on or off. Should anything happen to the power, putting your forced circulation out of commission, this new device, not dependent upon anything except nature's laws, takes up its task automatically.

### ABSOLUTELY AUTOMATIC

and it knocks everything else in forced circulation silly. Made with single, double or multiple propellers as our customers desire. After three years' experience we know we have the best apparatus ever built, equally as efficient as the original Electric Circulator or its copies in operation, simpler by far in construction, cheaper in price and any one who can make up two flanged joints and attach a belt can install it.

**It is a winner. Drop a line to us and we will be glad to show you.**

We have a new coupling for pipe or boiler tubes which is worth looking up. We hope very soon to show steam men something for returning water of condensation and automatically producing a vacuum. We are still placing the Castle Boiler and ready to accept orders for best modern piping systems. Hot Water or Steam.

## The Castle Company

Heating Engineers

170 Summer St., Boston, Mass.

PATENT APPLIED FOR

### Why My New Curved Iceless Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars incased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: Result, the driest roof ever used for greenhouse purposes.
- 4th. **THE MOST IMPORTANT OF THEM ALL.** The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

**William H. Lutton,** Horticultural Architect and Builder  
West Side Ave Station (C.R.R. of N.J.) Jersey City, N.J.

### The Advance Ventilating Apparatus

Our new pipe couplings makes the work of coupling up the shafting pipe an easy task. Beats anything on the market. We have other good practical things in our line that our patrons appreciate. Best of material, superior principles, ease of operation and erection, makes it popular everywhere. Give us a trial. You will come again. They all do.

## Notes from the Arnold Arboretum

One of the most attractive of the late flowering shrubs is the native White Alder or Sweet Pepperbush, *Clethra alnifolia*, which is now beginning to open its fragrant white flowers. In its wild state it inhabits usually swamps and the banks of ponds or streams, but in cultivation it takes kindly to drier situations and grows well in partial shade. In too dry and sunny situations, however, the foliage is apt to get discolored by becoming infested with the red spider. If planted solitary or on borders of shrubberies it rarely exceeds five feet in height and forms a round dense bush studded all over from the end of July to the middle of August with upright white flower spikes, but if growing between other shrubs it sometimes attains to ten feet in height. A variety which usually remains low and flowers several weeks later is *C. alnifolia* var. *tomentosa* with longer flower spikes and pubescent foliage. A pretty variety but recently discovered near Wattuppa Lake, Fall River, Mass., has pinkish flowers in dense spikes and has therefore been termed var. *rosea*; on account of its color it will add a pleasing variety to groups of the common form. Another native species, *Clethra acuminata*, is less handsome; it forms a loosely branched shrub or small tree up to fifteen feet high with spreading branches bearing usually solitary spikes of creamy white flowers. Very similar is the Japanese *C. canescens* (*C. barbinervis*) with several larger spikes at the end of the branches; it is prettier than *C. acuminata*, but is tender in the neighborhood of Boston.

Several of the native Spireas are now coming into bloom; they all belong to the section Spiraria and have the rather stiff habit of the species of this section. The handsomest of them is the Hardhack or Steeplebush, *Spiraea tomentosa*, with slender spikes of pink flowers and the stems and foliage densely covered with yellowish brown tomentum. Two other native species have white or slightly pinkish flowers; these are *Spiraea alba* and *S. latifolia*, usually included under *S. salicifolia*, but it seems more natural to use the name *S. salicifolia* only for the Old World species which is characterized by light pink flowers in dense panicles. *Spiraea latifolia* is the species common in this region and has white flowers slightly tinged pinkish by the pinkish disk and stamens and arranged in rather loose panicles broad at the base. *Spiraea alba* is a more southern species and found chiefly west of the Alleghenies, it has pure white flowers in narrow panicles, narrower leaves and stiff upright stems.

The last of the Sorbarias to bloom is *Sorbaria sorbifolia* var. *dubia*, very similar to *S. sorbifolia* but growing higher and of more spreading, less stiff habit. Also *Sorbaria stellipila* and *S. Aitchisonii* have still a few belated flower clusters; the latter species has already

been noted in the issue of July 18 as one of the most desirable of the Sorbarias. *Sorbaria stellipila* resembles much more *S. sorbifolia*, but besides flowering later it is of less stiff habit and has narrower and longer leaflets.

The Bittersweet, *Solanum Dulcamara* is now very handsome with its drooping clusters of glossy scarlet berries and its violet star-shaped flowers which continue to appear until September. It is a pretty vine for moist situations and finds its best place rambling among the shrubs along streams or in other moist and partly shaded situations; the foliage, however, is apt to suffer from the ravages of insects.

*Alfred Rehder.*

## British Horticulture

### A DESTRUCTIVE POTATO DISEASE

The ravages caused by the spread of black scab in potatoes have given great concern to growers in this country. The matter has lately been discussed at a conference at the Board of Agriculture. The National Fruit Growers' Federation who are taking up the question suggested that it should be made illegal for a grower to sell potatoes from a farm or holding where the disease was known to exist until they had been examined by some duly qualified person; that potatoes found diseased should be destroyed, the grower being compensated from treasury funds up to half their value, and that growers who plant potatoes within a period of years in ground where the disease has existed must, before offering the crop for sale, possess a certificate of the Board of Agriculture, certifying the land to be free from disease. The Board favorably received these suggestions, and agreed to schedule black scab as a notifiable disease. They also decided to adopt a further recommendation for withdrawing the published leaflet which stated that black scab was able to attack mangold and beet. The Board will also make investigations as to whether the disease was being introduced into this country by means of imported seeds. At a recent meeting of the Federation a speaker stated that the disease is more infectious from the soil than from the tubers themselves, and experts asserted that it was not safe to plant potatoes on land where the disease had recurred for six or seven years. The important thing the Board of Agriculture desire the Federation to tell them was how they could determine when a crop is infected, because there appears to be nothing to indicate the presence of the disease except in the potatoes themselves. This is a matter of extreme importance to commercial horticulture.

We have taken frequent occasions to remind  
 Time to our readers of the coming S. A. F. conven-  
 wake up tion at Niagara Falls and to urge upon  
 them the expediency of their presence and  
 participation in that important event. Our earnestness  
 in so doing is solely because we know what mighty

results would follow if the horticultural industries  
 which are legitimately represented in the make up of  
 the society could be awakened to the great possibilities  
 that lie within such a body when adequately supported.  
 Further, it should never be forgotten that neither the  
 individual who counts for anything nor any really live  
 organization can long exist in this world without en-  
 counterering restraining and coercive influences. The  
 Society of American Florists and Ornamental Horticul-  
 turists is no exception and it behooves those engaged  
 in horticultural and floral occupations, every one of  
 whom is vitally concerned, to see to it that any and all  
 movements tending to circumscribe the society's work or  
 weaken its position are firmly resisted.

Where The course of the express companies in  
 you are weak refusing to make allowance for weight  
 or be used in shipping cut flowers, as  
 in their custom with shipments of

other perishable commodities, is in line with their in-  
 sistence in every other controversy which has come up  
 that flowers are a luxury and nothing more, and that  
 consequently the grounds on which they allow certain  
 privileges in other cases cannot be admitted as applying  
 to cut flowers. Considering the uses to which flowers  
 are put and the enormous daily consumption of this  
 product it should be easy to show the weakness of any  
 argument classing them as luxuries and celery or mush-  
 room spawn as necessities. The weakness of the florists  
 consists, as it always has, in their lack of cohesion. A  
 united front and general willingness to make sacrifices  
 and share responsibilities individually in measures for  
 the common good would long ago have placed the florist  
 in a much more favorable position commercially than he  
 enjoys today. Express companies and others are awake  
 to this lack and it may be expected that they will take  
 full advantage of it.

In the eastern States the market gardener  
 Intensive seems to have reached the point where  
 cultivation old-time methods of culture are hardly  
 profitable. To successfully compete with  
 the bountiful productions of the more fertile West, he  
 must practice more scientific and advanced cultural  
 methods, and obtain if possible a higher grade of  
 products from his naturally less productive soil. It is  
 true that he has the advantage in markets of large, pop-  
 ulous and wealthy cities, whose attractions and com-  
 forts seem to have such magnetic influence upon those  
 who acquire wealth in other sections of the country that  
 they are irresistibly drawn towards their luxurious life.  
 The wealth and luxury of our Atlantic coast cities are  
 the elements which afford opportunity for intensive  
 gardening. As we learn today of hothouse chickens and  
 milk-fed ducklings, so shall we hear speedily of intens-  
 ive-culture vegetables and salads. In the larger cities  
 of Europe a demand for such vegetable products has  
 existed for generations, and has been supplied chiefly  
 by the market gardeners of France. France has been  
 noted for her ability to obtain better prices than other  
 countries for her products, for while others have strug-  
 gled with their necessities, she has catered to the de-  
 mands of luxury the world over. Even in the United  
 States we are dependent upon her for many of the finer  
 vegetables and salads served in our best hotels and clubs.  
 For instance, fresh grown cauliflower during spring  
 and early summer are imported from France and, later  
 in the season, globe artichokes, endive, chicory, etc.  
 That the supply of these delicacies at practically all

seasons of the year offers ample scope for the enterprise of the eastern grower who cares to practice intensive cultivation and furnish a higher grade of produce than is now obtainable in our home markets is obvious. Already we have followed French methods to a greater degree than any country perhaps with the exception of Belgium. The French have the advantage of us in their skill in using successive catch crops, cultivating simultaneously three or four distinct crops in the same frame and in such a manner that one does not interfere with the success of any of the others. They are growing, too, a number of good things, especially in the way of salads, which we have neglected, and for which there is even now a limited demand here. We have better houses and equipment and our labor-saving devices practically offset their cheaper labor. With the accumulation of wealth the demand for these finer vegetables must necessarily increase and certainly presents a promising, unoccupied field for economic horticulture in the East.

### *Iris laevigata* (Kaempferi)

The Japanese irises of our gardens are varieties and improved forms of *Iris laevigata* (*I. Kaempferi*). The species is a native of eastern Siberia and Japan.

As a garden plant in Japan there are very few other plants that are so highly prized as these irises. The many showy varieties and forms are thought not to be hybrids but have been obtained by selection. Probably the first varieties were brought to this country by Thomas Hogg about the year 1869, but it took them many years to become popular. Now they are to be found in almost every garden.

They are easy to grow if a few cardinal points are attended to. They like good rich, damp, soil; but dislike a position where water rests around their roots in winter. When they are growing give them an abundance of water and any extra care given in this way they will amply repay by their wealth of blossoms and the increased size of flowers. The situation which suits them the best is one where they get the full benefit of the sun.

They may be transplanted in spring or fall, but if done in the fall the transplanting should be early so that the roots may get a good hold of the soil before the winter sets in.

There are an immense number of varieties but about a dozen good distinct kinds will be enough for almost any garden. The double forms are very pleasing and very showy. The wonderful size of the flowers, often eight to twelve inches in diameter, make them especially valuable for garden decoration, but they are not very valuable as cut flowers. They are a July flower and finish up the iris season. To get the best effects they are most pleasing when the masses are made up of distinct varieties. There is no class of plants that has such confusion in their nomenclature, therefore I will not give a list of names.

*Robert Lammerson*

## Roses Under Glass

AFTER PLANTING

As soon as the planting is finished, the houses should be given a thorough cleaning. All the walks should be scraped clean of soil and a light covering of small ashes applied. When table benches are in commission the ground underneath should be raked and all debris, decayed leaves and weeds carefully removed, as these, if allowed to remain form excellent hiding and breeding places for all sorts of pests, especially red-spider and thrips, two of the most obnoxious of our insect enemies.

The early planted stock, if not completed already, should be staked and tied up at once. It is not advisable to allow the young growths to ramble and intertwine, as this condition invariable results in a crop of blind or thin wood, which detracts from the appearance of a plant and adds nothing to its value.

Disbudding should be practiced at regular intervals, and with the best judgment of which the grower is capable. Nipping off the bud as soon as it shows itself is admittedly an easy way of doing the work, but is far from attaining the object desired, which is to encourage the growth of strong and vigorous wood from which we may expect to cut future crops of good salable flowers. It is usually safe to cut off, along with the bud, from two to four of the eyes immediately below the bud, being guided in the number by the length and strength of the stem.

After the first crop of weeds have been removed cultivation should receive considerable attention, as it is a great incentive to vigorous growth, and should be practiced freely until the roots approach the surface when further cultivation would be injurious. Greenfly and other insects should not be allowed to establish themselves on the plants. A light fumigating whenever the weather will permit will serve to keep them in check, as the constant syringing during the summer months is a great help in keeping these pests in subjection.

Too much importance cannot be attached to careful handling of the ventilators, if we would escape the unwelcome attentions of mildew. Abrupt changes of temperature must be avoided as much as possible. At the same time, plenty of fresh air day and night is one of the most important factors in the development of healthy, vigorous stock, but should at all times be administered with the most careful judgment.

*J. E. Simpson*

### SPECIAL CONVENTION NUMBER

DON'T MISS IT.

Send Advertising Copy NOW and  
We'll Do the Rest.

# NEWS OF THE CLUBS AND SOCIETIES.

## SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Supt. Chas. H. Keitsch reports \$150 sq. ft. of exhibition space at the Cataract Hotel, sold for the exhibition of August 18-21, up to July 25. To the list of exhibitors already published, the following are added:

Sq. ft.	Sq. ft.
Peters & Reed, 32	Wash. Tr. Works, 50
Catap. Corbitt Co. 180	Ed. Warner & Barty, 30
J. G. Neudinger, 175	American Florist, 52
G. M. Garland, 100	

Supt. Keitsch has notified the Merchants' Dispatch people to have their different agents call on shippers whose names will be supplied to them, to see if they can be induced to get all their freight together in one or several cars at the different cities, so that it is possible all or nearly all freight will get to the Falls in one day.

At Niagara Falls he has arranged with H. W. Anderson, a responsible trucking firm, to take care of all freight coming to the convention. This firm agrees to carry all freight from the railroads to the trade exhibit in hall for 15c. per cwt. All shippers will shortly be supplied from the superintendent's office with uniformly printed tags giving directions, etc., which will minimize the danger of delays or possible miscarriage. Freight should in every case be prepaid, as this will avoid confusion and possible delays.

It has been arranged to cover all tables and benches used by exhibitors with either dark green cambric or, if preferred, with white cotton goods. This will be done without extra charge.

## HOTELS IN NIAGARA.

Following is a complete list of the better houses in Niagara Falls with rates:

Cataract and International (headquarters), \$1.00 to \$5.00, American plan.  
Prospect House, \$3.00 to \$5.00, American plan.  
Imperial Hotel, \$2.50 to \$3.50, American plan.  
Tower Hotel, \$2.50 upwards, American plan.  
Clifton Hotel, \$2.50 upwards, American plan.  
Kaltenbach House, \$3.00, American plan.  
Temperance House, \$2.00 and \$2.50 upwards.  
New Clifton House (Canadian Side), \$4.00 to \$6.00.  
J. ROWLAND CLOUDSLEY,  
Sec'y Buffalo Florists' Club.

## CINCINNATI TO NIAGARA FALLS.

Inasmuch as through peculiar circumstances the Cincinnati delegation to the S. A. F. Convention at Niagara Falls are able to take advantage of an excursion that is being run to that city, leaving here at the proper time and with a time limit of 12 days, we desire to have it known to all florists

of this district and elsewhere that the Cincinnati florists extend to them a hearty welcome to join us and at the same time to save money.

The Cincinnati delegation will leave Saturday, Aug. 15, via C. H. & D., at 1.30 P. M., to Detroit, remaining there till Monday evening, when they will join the Detroit delegation, going by boat to Buffalo, thence by rail to the Falls. The round trip will be but \$7. A stateroom on the boat will cost but \$2.50 and holds three persons. Inasmuch as staterooms on the boat will soon be at a premium it is necessary that all those desiring to take advantage of this very low rate communicate at once with E. G. Gillett, 114 E. 3rd street, who has the matter in charge. Those not wishing to lay over in Detroit till Monday evening can leave Sunday evening just as well if due notice is given.

Cincinnati expects to have a large delegation, as everyone knows we are after the convention for 1909, and we won't leave any stone unturned to persuade it to come here. We are making an appeal for votes now, but we will make a much stronger appeal when our delegates get on the convention floor.

C. H. OHMER, Secy.

## AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.

Program for Tenth Annual Convention, Minneapolis, Minn.,  
Aug. 11, 12, 13, 1908.

FIRST DAY—TUESDAY, AUG. 11.  
Park Commission's office, 3rd Floor, City Hall.

9.30 A. M. Executive Committee Meeting.

10.00 A. M. Annual Meeting, President J. F. Cowell presiding.

Address of welcome. His Honor the Mayor, James C. Haynes; Hon. Jesse E. Northrup, President Board of Park Commissioners. Response by Prof. J. F. Cowell, President American Association of Park Superintendents. Reading of Minutes. Balloting for Members. Reports of Officers and Committees. Unfinished Business. New Business. Proposed Changes of Constitution. Place of next meeting. Appointment of nominating committee for officers.

12.15 P. M. Ride to Minnehaha Club, Lake Calhoun.

12.45 P. M. Luncheon at Club House as guests of the Minneapolis Commercial Club.

2.00 P. M. Reading of Essays and Discussions at the Club House.

1. "Concessions," J. F. Foster, Superintendent of South Parks, Chicago, Ill.

2. "Oiling and Post Laying," M. H. West, Superintendent of Lincoln Park, Chicago, Ill.

3. "Park Commissions and Administration," J. A. Pettigrew, Superintendent of Parks, Boston, Mass.

4. "Concrete Construction in Relation to Park Work," Jens Jensen, Superintendent of West Parks, Chicago, Ill.

8.15 P. M. Concert, Lake Harriet Pavilion. Sail on Lake.

SECOND DAY—WEDNESDAY, AUG. 12.  
A thirty-two mile automobile trip around the Park System. Guests of the Minneapolis Automobile Club.

8.30 A. M. Start from Headquarters. Drive Park, Glenwood Park, Loring Park, Kenwood Parkway, Lake of the Isles Park. Inspect Orange Peel, Dipper and Hydraulic Dredges at work Lake Calhoun, Lake Harriet, Lyndale Farmstead (Greenhouses and Administration Plant), Minnehaha Parkway, Fort Snelling and Minnehaha Park.

12.30 P. M. Luncheon at Minnehaha Pavilion. Guests of the Board of Park Commissioners.

1.30 P. M. Photograph will be taken at the foot of Minnehaha Falls. Stroll through Glen and Park.

2.30 P. M. Continuation of Automobile Ride, River Road West, Riverside Park, Franklin Avenue Bridge, River Road East, University of Minnesota, Van Cleve Park, Columbia Park, Logan Park, and return to headquarters at 6.00 P. M.

8.00 P. M. Business Meeting of Headquarters. Election of Officers. Miscellaneous Business. Further Discussion of Papers and what has been seen. Question Box.

THIRD DAY—THURSDAY, AUG. 13.  
A trip to Lake Minnetonka.

1.00 P. M. Luncheon at Big Island. Guests of the Board of Park Commissioners.

4.00 P. M. Final Business Session.

## AMERICAN CARNATION SOCIETY.

### Carnations Registered.

By W. N. Rudd, Morgan Park, Ill.

"Greenwood." Parentage seedlings on both sides. Color shell pink; size of flower, average 3 1-2 inches. An unusual fine formed flower, high built bloom; long heavy stiff stems, not so free as some smaller varieties but it is believed the extra quality will make up for it. Continuous bloomer, moderate grower; in habit a little inclined to be straggly.

"Mrs. J. C. Vaughan." Parentage seedlings cross on both sides; Day-break Scott and Enchantress blood in it; color white; size of flower 3 1-2 inches average; growth vigorous and branching freely; early, free and continuous bloomer; stem long, stiff and wiry; equal to the best standard variety as regards non-bursting. A bold, well-formed flower with good substance, keeping and shipping qualities, as good as the best.

ALBERT M. HERR.

Lancaster, Pa. Sec'y.

## LOS ANGELES FLORIST CLUB (CALIF.)

On Saturday, July 11, the Los Angeles Florist Club met for the first time in the Eagles' Hall, West Third street. The club was organized some three months ago and a suitable hall has been hard to get. The meetings have been well attended and there are about 100 members. The officers are as follows: O. C. Saakes, president; Dr. Houghton, vice-president; G. S.

Duncomb, secretary; E. Gage, financial secretary; T. Turner, sergeant-at-arms.

#### PASADENA GARDENERS' ASSOCIATION.

At a recent meeting of the Pasadena Gardeners' Association it was decided to hold a fall show of flowers, fruits and vegetables for three days, October 22, 23, 24. This will be the first fall show held by the association, but they feel encouraged to undertake it by the success attending their spring show. Everything looks very favorable for a good exhibition. The committee in charge is J. Coats, chairman; R. MacKenzie, secretary; F. Ginke, J. Johnson, George Dell; Jno. Blake, manager.

#### CLUB AND SOCIETY NOTES.

The second cherry fair at Salem, Ore., opened on July 16 with a display of this luscious fruit greatly surpassing in variety and quantity that of last year, in a 200-foot open pavilion. A parade preceded the opening of the fair. Throngs were in attendance.

The Juvenile Horticultural Society and H. H. Lillenthal, of Berkeley, Calif., have sued Postmaster Merrill for \$2400 claiming that neglect of his office to deliver invitations to an outing at the De Moto Bros.' gardens, sent out four days in advance, resulted in the failure of the excursion.

At the meeting of the North Shore Horticultural Society, Manchester, Mass., July 17, the matter of incorporation was discussed and an informal vote was unanimous in its favor. W. Till, J. Baker, A. E. Parsons, Herbert Shaw and Joseph Clarke were appointed to present the matter to the absent members and action will be taken later.

#### COMING EVENTS.

Horticultural Society, Tarrytown, N. Y., picnic at Rye Beach, August 4.

Minneapolis, Minn., American Association of Park Superintendents, August 11, 12 and 13.

Niagara Falls, N. Y., Society of American Florists, August 15-18.

Niagara Falls, Ont., Canadian Horticultural Association, August 19, 20 and 21.

Sheboygan Falls, Wis., State Horticultural Society, August 26 and 27.

New York, N. Y., Playgrounds Congress, September 3-12.

New York, N. Y., American Institute of New York, exhibition, September 22, 23 and 24. Berkeley Lyceum Building.

Hartford, Conn., Connecticut Horticultural Society, fall show, September 23; chrysanthemum show, November 3, 4 and 5, Unity Hall.

Dear Sir:—

Please discontinue my Rose ad.; sold out. When again I have something to sell to the trade will certainly use your paper as a medium.

Thanking you,

Yours truly,

JAS. J. CURRAN.

Salem, Va., July 27, 1908.

## During Recess

### GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The annual club picnic which so many have been looking forward to came off as scheduled, on July 29, at the beautiful Pine Banks Park in Malden, Mass. The weather was perfect and the attendance large, the only regrettable incident being that James Wheeler received a severe blow in the eye from a batted ball while he was serving at first base. In spite of this, he managed to put the striker out, which was some consolation for the swollen and discolored optic he will have to carry for a few days. The ball game was won by the private gardeners by a score of 29 against 13 for the commercial men. The boy's ball game was won by the Westwood team, 8 to 3. The tug-of-war was won by the private gardeners under Capt. Duncan Finlayson. Winners in other events were in order as follows: 100-yard race, boys under 15, first, T. Westwood; second, R. Rust; sack race, W. J. Collins, W. Martin; novelty contest, Mrs. Rogean, Mrs. Craig, Mrs. Flood; fat men, W. R. Nicholson, D. Iliffe; 100-yard dash, W. S. Grassie, J. W. Lalley, T. S. Brown, A. E. Walsh; 3-legged, boys, W. Westwood and F. Hargreaves, J. Sisson and T. Westwood; 75 yards, girls under 18, Eliz. Reed, Uno Bar-teum; 75 yards, girls under 16, Harriett Collins, Lillian Campbell; 50 yards, girls under 12, Edith Iliffe, Margaret Iliffe; half-mile, W. S. Grassie, T. S. Brown, David Barnes; 75 yards, boys under 12, T. Iliffe, Theo. Palmer; 3-legged, men, Collins and Reed, Thurston and Welch; running broad jump, W. J. Collins, 16 ft. 2 in.; J. W. Lalley, T. S. Brown; putting the shot, John Reid, W. J. Collins; potato race, Mrs. H. F. Wood, Mrs. J. F. Flood, Mrs. E. J. Rogean; consolation, Edw. Rose, W. Iliffe, H. Coles.

### LAKE GENEVA GARDENERS' AND FOREMEN'S ASSOCIATION (WISCONSIN).

The annual picnic of this association was held on July 26, a trip around Lake Geneva on a chartered boat being the day's feature. Calls were made at the following places, whose grounds reach to the foot of the lake: J. J. Mitchell's estate, where the visitors were escorted about by Supt. A. J. Smith, and were particularly interested in the carpet bedding, lily pond and the sub-tropical bedding around the house which is called the salon court, this building being the salon building of the World's Fair at Chicago; Miss Kate Jones', where J. Sobbe did the honors; R. T. Crane's, where the president of the society, Axel Johnson, is in charge. Noticeable here were the pot-grown fruit trees and houses of grapes, Black Hamburg and Queen Alexandra being favorites. The next call was at the Seitz estate, Mr. Bartholomae and Mr. Johnson taking charge of the party, followed by a call at the famous breeding ground of the Leiter estate, Supt. Simmons being the host. On the return

trip the gardeners were dropped off at their respective destinations.

The society is in a prosperous condition, and the members know how to work as well as play.

### DETROIT FLORIST CLUB.

About one hundred members of the Detroit Florists' Club enjoyed a day's outing at Bois Blanc, sailing on the pleasure boat, Columbia. Dancing and swimming kept young and old amused until the elaborate sporting program called everybody's attention. Unforeseen additions to the Detroit Cut Flower team strengthened that team unexpectedly, and for the first time this season the Michigan Cut Flower aggregation went down to defeat with a score of 8-3.

The fat men's race was won by Fred Becker, married women's race by Mrs. H. Pierce, single women's race by O. Knope, tug of war by East Side florists, broad jump by Hugh Watson, 100-yard dash by Martin Alezack, 3-legged race by Wm. Brown and Ed. Beard, boys under 16, Howard Knope, girls under 16, Mamie Carey, boys under 10, Howard Knope, girls under 10, Marion Bloy.

### INDIANAPOLIS FLORIST CLUB.

A most enjoyable time was had at the picnic of the Indianapolis Florist Club at Germanic Park, July 23rd. About 150 were present, for whom foot races, bowling, etc., were provided. The feature of the afternoon was the ball game between the South Side and the North Side florists, which resulted in favor of the former with a score of 11 to 10. A box of cigars was distributed among the winners. The umpires were John Elsnor and John Hartje; committee of arrangements, H. Piel, Sidney Smith, Ernest Rieman and Theo. Woerner.

### OMAHA (NEB.) FLORIST CLUB.

The annual picnic of the club was held at Lake Manawa, Ia., July 23. There was a large gathering; the weather was fine and hot and there was no time lost in seeking the shady nooks and running brooks. Foot races, bowling and numerous amusements were indulged in until six o'clock when lunch was served, after which a boat ride across the lake was taken to the beach where some enjoyed bathing and others dancing until late in the evening. The whole affair was the best the club ever had.

Today, Saturday, August 1, the New York Cut Flower Exchange members and their friends are enjoying a clam bake at Wetzel's Point Grove.

The Florist and Horticultural Society of Birmingham, Ala., held their annual outing and barbecue at West Lake, on July 22.

Corfu, N. Y., July 20, 1908.  
HORTICULTURE Publishing Co., Boston.

Dear Sir:—Your paper brought even more answers this year and I hope you will draw a still larger trade for me next year. I even received an answer from Havana, Cuba.

Yours truly,

W. EHMANN.

## Roses from a Retailer's View

BY. J. F. SULLIVAN.

The First Installment of This Paper was Published in Our Issue of April 11, 1908.

Retailers view with pleasurable gratitude the powerful agency of the flower shows in the development of the rose, and the maintenance of its popularity. In the early days of the rise and progress of this flower industrially speaking, the retailers were more conspicuous for their zeal in using these shows as mediums to strengthen their individual work in behalf of the Rose than they are at the present day, and the retailers are forced to admit the increasingly active participation in these events by the enterprising rose growers, and gratefully acknowledge the great good they are doing of a most permanent character.

### Novelties Called For.

At the same time the retailers deplore the seeming indifference of many growers in the important matter of providing them with more of the novelties in roses, the necessity for which is most apparent. So pronounced and general is this interest, and indeed eagerness of the rose patrons to satisfy their delights in new varieties, that I venture to say that were some of the once favorite roses that are now relegated almost to oblivion, and which the so called up-to-date grower of these times would disdain to grow, resurrected, they would find a ready market and many warm appreciative friends among rose enthusiasts. As an example I might cite the case of old Bon Silene which is now grown in some quarters and is meeting with an encouraging demand. And in considering the adoption of varieties to meet this changing taste of the people, it is well to remember, that it is not size alone that constitutes the chief element in a beautiful and most acceptable rose, as is clearly and constantly shown by even the most fastidious patrons of the retail stores while making their selection. The public are craving for novelty—something different from the monotonous few varieties that greet them on their recurring visits to the floral store. Any of the older varieties are sufficiently attractive to the casual buyer, but the steady patrons who are our most valuable ones, must be shown something new to hold their continued and increasing interest in our chief commodity. As an evidence of this tendency on the part of a large portion of the flower lovers, for variety and novelties, witness the increasing interest shown by them the last two or three years in the dainty Pompon and Anemone chrysanthemums, and often by identically the same persons who formerly sought the largest specimens of that flower at the time obtainable. Even the now commonly grown Crimson Rambler, is frequently used in most important social functions for its decorative effect in preference to the conceded more beautiful varieties, simply because, for the time being, this

rose carried with it the element of novelty.

If rose growers who are devoted to the production of cut blooms alone believe, as they evidently do, that a list of a half dozen varieties of the same embracing merely the primary colors, will, even if ever so well grown and beautiful, satisfy the exacting taste and aesthetic inclination of the flower loving public, I would ask how can they reconcile such a theory with the most palpable contradiction of it when we consider the marvelous expansion of the rose plant industry as shown by the firms issuing catalogues. Many of these will tell you that they enjoy the continuous patronage of their old customers chiefly by the latter's intense interest in the newer varieties of roses as they are annually offered.

### Growers Must Take Initiative.

But the experimenting must be the burden, if we may call it, of the growers. They must take the initiative steps. The retailers, zealous as they are, cannot offer to the public a variety having only an imaginary existence or merely prospective value. To the timid but perhaps well meaning grower I would say, try out the new varieties giving promise of a good future; give them a fair and honest trial without prejudice, not as we too frequently see growers half heartedly assigning the most unfavorable spot in their greenhouse to a few dozen plants of a novelty and thereafter being daily disturbed with suspicions that the stranger among the pet varieties is only another fake and after a brief experience seeming only too willing to denounce it. As an illustration of the respective attitudes of the retailers and many growers I will cite the case of the Killarney rose, a variety the superior merits of which are now universally conceded. Witness its struggle for the recognition deserved.

### Killarney's Struggle.

Soon after the Killarney's introduction in this country about nine years ago, a few growers experimented with it in a limited way. The keen, well trained eyes of the retailers who by chance came into possession of the cut blooms recognized instinctively their rare beauty and prospective value and true to the enterprising methods that had already gained for them a big rose trade, they soon acquainted their customers with the distinctive finished beauty of the novelty, the supply of which was as yet limited. The increasing popularity of this variety and the consequent demand for it kept much in advance of the supply, which fortunately improved rapidly in the hands of but a few growers. Retailers everywhere urged more growers to plant it. The latter, nevertheless were distrustful, and persistently refused to give it a fair trial and in this case, as in many others totally ignored the advice of the man behind the counter. One grower would say that it was too short stemmed, another called it a cropper, and

another thought it a shy bloomer. A few wise ones thought that we had too many pink varieties, but in the meantime a few real wise ones—growers and retailers alike—were doing a big business in Killarney roses and incidentally advancing the popularity of the Queen of Flowers and aiding floriculture generally.

### Needs of the Summer Trade.

The grower's indifference to the constant pleadings of the retailers to awaken to the importance of growing varieties that would be particularly available in the warm summer season, has delayed inexcusably the full development of the lucrative trade for both grower and dealer that is attainable during this period. The present growers cannot justify their lethargy in the past in this respect by the absence in commerce, as they allege, of such varieties as will by their productiveness, color and quality commend them for the purpose named.

The retailers often wonder when contemplating the indisputably proud and exclusive position the rose holds in the hearts and minds of the people—what would be the extent of the commercial importance and increased popularity of the Queen of Flowers were it not for its present prohibitory price to the masses, which operates to its disadvantage, commercially speaking. With that barrier removed appear to them visions of acres of glass being annually added to the existing large area now devoted to its culture, and the additions of thousands of florists engaged in this healthful and profitable industry, and viewing the vast strides made by hybridizers in recent years, may we not reasonably expect that a type of roses can yet be brought out which in addition to the quality of the flowers will also be sufficiently productive to allow them to be sold at a price that will place them in the hands of the masses, and their popularity thus extended to the full gratification of every lover of the rose. And this blessing may be the same process be extended to the multitude of homes where out door culture of the rose is possible were the suitable varieties available.

### Advertise.

The exploitation of our wares being essentially a commodity of luxury, calls for our very best efforts to impress the public with their beauty, and the multiplicity of their uses. We must show our finest, and encourage the admiration and consequent use of them. We must advertise—the day is upon us to employ "printers ink;" our stores and stock must be made familiar with the people; we must acquaint the daily press with the current news concerning the rose—its development; its beauty and increasing popularity, and indeed it is a sad truth we are forced to admit, that of all the matter recently appearing in the daily press and monthly periodicals, columns, yes pages of it, relating to the rose either culturally or descriptive and eulogistic of it as the Queen of

Flowers, very little if any of it emanates from the great army of florists whose interests are so materially enhanced with such publicity, which in other words is real advertising, without any cost to the negligent beneficiaries. And if the retailers would maintain their coveted position as the leaders in popularizing the rose in the future as in the past, they cannot ignore this powerful assisting agency so universally available.

The identification of florists with the Civic Improvement Societies now everywhere so popular and aggressive in their work, is another means by which our business may be greatly helped. All this missionary work must be carried on in the future as in the past by the retailer and even with more energy than formerly, for the grower, broadly speaking, is not known to the public or its quota of flower buyers, except the growers of Chicago and vicinity who seem to be as successful in exploiting their work through the daily press as they are in carrying it on under their immense areas of glass. The retailer has an established identity. He is in the eyes of the people and to them is a real fountain of floricultural knowledge.

#### American Beauty's Limitations.

Society has as the result of a combination of circumstances aided by the florists themselves forced the American Beauty to a position of prominence that seems at times to discourage the hybridizer in his endeavor to produce a successful rival to that famous variety, but, alas! as every retailer knows, that variety at times is anything but a real beauty, but having been wisely christened, its celebrated name often saves it from the condemnation it too frequently deserves. Originators need not fear for a place in this country for their meritorious productions even if they fall far short of the size of the popular American Beauty. Size alone does not always commend a rose—length and strength of stem with nice foliage supporting a flower beautifully distinct in color and form, will never suffer materially in comparison with its companion of larger size, coarse texture and varying shades of unattractive colors. We shall say nothing of "bull heads" that in a measure serve to disfigure the whole rose family.

#### The Beauty's Rivals.

Personally I should prefer to see half of the glass at present devoted to American Beauty given to a few of our other leading sorts and a further extension of our present list of forcing varieties to include those particularly reliable for summer blooming, and in this position I fully realize that I am in danger of standing almost alone. But it is a well known fact that no longer are retailers embarrassed when they are unable to answer the call of the critical rose customer for American Beauty if they are prepared to offer as a substitute either that marvelously distinct and strikingly beautiful rose Richmond or its worthy and popular companion Killarney, and indeed these are now often preferred to Beauty irrespective of the cost. Even from Classic Boston comes the statement in a trade report as recent as last week that "The demand for Beauties is not active, many people

#### THE WITTBOLD CEMENT BENCH.

Our illustration shows the construction of the Wittbold cement bench. In these days of permanent building and the elimination of everything in material liable to decay, greenhouse owners are having their interests well cared for by the ingenious and inventive minds in and out of the profession. As a practical greenhouse

now preferring Richmonds and Killarney." And when we reflect upon the dismal failures attending the attempts of some growers with Beauties we are moved to pity, and regret that the same glass and efforts were not devoted to other varieties which would be most certain to yield better, if not entirely satisfactorily results.

In conclusion allow me to say to those of us who are engaged in various ways in advancing the interests of the rose, and who at times feel the encroachment of its reputed rival—the carnation—supported by its aggressive Society, remember, that we too have a Society, devoted to the "Queen of Flowers" and being faithful in our efforts in its ranks and working along lines of its noble aims, and prompted by its suggestions, we shall maintain the rose by its glorious ascendancy to where its unrivaled beauty and adaptability to all phases of decorative adornment justly entitle it, and after having accomplished so much in advancing its popularity, we shall still persevere in its behalf until we have achieved the full realization of our cherished desire and ambition "A Rose for every Home, a Bush for every Garden."

#### ADVERTISING BRINGS BUSINESS.

Gentlemen,—Our original instructions to you were to continue our ad for three (3) months, which period we think expired in June, but as we have had considerable inquiry as a result of our ad, we have concluded to continue same, and you may do so until advised to the contrary.

Yours very truly,  
BOSTROM-BRADY MFG. CO.  
Atlanta, Ga., July 22, 1908.

man and plant grower, Mr. Wittbold is in a position to know what constitutes an improvement in bench construction and the appreciative commendations that have come to us are no doubt well founded. E. H. Hunt of Chicago is Mr. Wittbold's representative in introducing the cement bench, and a line to him will bring forth full information concerning it.

#### GREENHOUSES BUILDING OR CONTEMPLATED.

Davenport, Ia.—Chas. Hummel, additions.  
Chicago, Ill.—Anton Then, two rose houses.  
Washingtonville, O.—J. H. Cox, additions.  
Rock Island, Ill.—H. Gaethje, two houses.  
San Francisco, Cal.—N. Arminino, additions.  
Detroit, Mich.—Harry Smith, range of houses.  
Burlingame, Cal.—E. W. McLellan, two houses.  
Fostoria, O.—Fostoria Floral Co., range of houses.  
Goshen, Ind.—Colonial Flower Shop, one house, 29x50.  
Peoria, Ill.—Frank Jerabek, two houses, each 37x50.  
St. Louis, Mo.—Connon Floral Co., rose house, 25x150.  
Owatonna, Minn.—Clinton Falls Nursery Co., two rose houses.  
New Bedford, Mass.—R. H. Woodhouse, additions and improvements.

#### LIST OF PATENTS.

893,704 Plant Protector. John A. Bryne, Red Springs, N. C.  
893,735 Hay, Stray, or Like Cutting Knife. Richard Jones, Pennsylvania, England.  
893,798 Motor-Plow. Corda A. Hart, Danville, Ill.  
893,799 Combination Plow and Harrow. Ephraim J. Steele, North Braddock, Pa.

## EXPOSITION AT GAND, HOLLAND.

Payne Horticulte gives a very interesting description of the International Exposition at Gand, Holland, from which we extract the following notes on novelties shown, the translation being by Mr. G. Blecken.

Among the plant novelties of particular interest figuring at the recent International Exposition of Horticulture, at Gand Holland, was a remarkable collection from Sander & Sons. They exhibited: *Anthurium Sanderi*, a superb plant of Central American origin, where it was recently found by Mr. Forget, who named it *Magnificum*. The leaves are about a yard long and 18 inches broad, on a three-foot petiole deep green color with silver veins, the under side being pale green. *Anthurium Laucheanum* is a very curious and beautiful variety, native in Columbia, and called by some, *Splendidum*. *Coccoloba nucifera aurea*: Leaves golden yellow. *Bromelia tricolor*: Leaves about two feet long and two to three inches wide, of green color with wide margins of pink in the young foliage, changing to yellow in the older foliage. *Caladium Centenaire*: This is a native of Brazil, and has very large foliage; the petals dark purple and the blade pink with deeper red veins. *Croton Fred Sander*: This Croton has three-lobed leaves, the middle lobe being much larger than the sides. Golden yellow with margins of deep green principally on the extreme ends of the lobes. *Encephalartos Woodii*: This novelty comes from Zululand. The plant has a trunk about two feet in height and carries about twenty leaves, which measure three to four and a half feet. *Pereskia Godseffiana*: This plant comes from Queensland, but is no doubt a variety of *P. aculeata* of the Antilles. It is interesting on account of the foliage, which is equally striped with yellow, with more or less tints of red changing into green as the plant grows older. *Philodendron Ilsemani*: A native of Brazil, with oblong foliage, deep green color, and striped with light yellow, tinted pink around the edge. *Penanga Micholitzii*: An elegant little native of Sumatra. Leaves about a yard long, deep green spotted with yellow in the older plants, but in the younger of a more pink tint. *Ptychorhaphis Sibertiana*: A native of the Malay Islands, with pinnate foliage of a metallic color when young, changing later into deep green. *Ficus Australis variegata*: With green and white foliage. *Nephrodium gracillimum*: A variety of *N. decompositum* of Australia.

M. L. de Vilmorin had a lot of shrubs and herbaceous plants from China, all recent introductions, some of them not yet identified. We cite a few: *Berberis sanguinea* and *Yunnanensis*; *Allantia Vilmoriniana*; *Cornus foliolosa*; *Corylus tibetica*; *Cotoneaster adpressa*; *C. angustifolia*; *C. Franchetii*; *C. Moupinensis*; *Davidia involucrata*; *Decaisnea Fargesii*; *Deutzia Vilmoriniae*, *Ligustrum Delavayanum*; *Lonicera*, several species; *Philadelphus seikanthus*; *Prunus canescens*; *Rhododendron Annae* and *Chartophyllum*; *Ribes Vilmorini*; *Rosa*, several species; *Siphocanthus Delavayi*. Among herbaceous plants: *Aconitum volubile* and *latisectum*; *Corydalis Cheilanthesifolia* and *tomentella*; *Hypericum Lysimachoides*; *Lilium Sutchuenense*; *Thladiantha Oliveri*, etc.

H. Correvon, from Genoa, presented under the name of *Omphalodes doraniensis*, a hybrid obtained by him, a cross out of *O. Lucilliae* and *nitida*.

J. C. Schmidt, Erfurt, Germany, presented gloxinias with reddish foliage and cyclamens with broad fringed petals.

Mr. Van Tuburgen, of Haarlem, Holland, exhibited *Tulipa Fosteriana* from Central Asia. The flower is a brilliant red, the basis of the divisions being yellow. This tulip resembles very much *T. Oculus Soils*, but it has much larger flowers.

Jacob Mackoy & Co. showed a very pretty maranta from Brazil, designated by the name of *M. Glosoni*. The leaves are striped pale yellow and deep green.

A lot of plants sent out since 1903 was exhibited by M. L. De Smet-Duvivier. This included a *Begonia* from Brazil resembling *Begonia semperflorens*, but with oblong foliage lightly punctated with white and the flowers white; *Philodendron Duvivieri* with large deep lobes; *Phormium atropurpureum nanum*; a hybrid anthurium between *A. Veitchi* and *Andreanum album*. *Cyrtostachys Renda*; var. *Duvivieriana*; *Sansevieria Laurentii*; *S. Guineensis*; *Nephrolepis Amerpohli*; *Maranta insignis*; *Ficus Dryepontiana*; etc.

Mr. R. Pinot exhibited a very interesting *Begonia* from Brazil. It belongs to the *Begonia Rex* variety and the leaves are peltated pale green in color, the veins showing white and bright.

## LIBRARY NOTES.

Any of the books mentioned in Mr. Payne's reviews can be supplied at quoted price from the office of HORTICULTURE.

"London Parks and Gardens," by the Hon. Mrs. Evelyn Cecil (Alicia Amherst). This very handsome volume deals with a subject that is of infinite interest to many lovers of horticulture and more especially so to those occupied with the difficulties of town gardening. Many American visitors to London must have admired the flower gardening in the leading London parks where grand displays are often made throughout the year. But the book does not deal wholly with the gardening aspects of our London parks, for it includes the historical and other features of literary interest relating to them. "London Parks and Gardens," is turned out by the publishers in the very choicest style. It is a royal quarto in size, nicely printed, tastefully bound and gilt lettered, and has a series of 25 full page colored illustrations after drawings by Lady Victoria Manners. There are also other illustrations in black and white. The Hon. Mrs. Evelyn Cecil's book will assuredly find a place on the shelves of every library, public or private, where books on London are kept. It is a mine of information to which many will have occasion to refer. We have perused it with pleasure and although we have lived for over half a century in the great city we have learnt more from a perusal of its pages in an hour or two than we could have otherwise acquired in a lifelong residence when our daily duties are considered. The price of the book is \$5.25, plus carriage.

The Summer Garden of Pleasure, by Mrs. Stephen Batson. A large octavo, well printed on old-fashioned paper, with numerous illustrations in color, this new book is well worthy of taking rank by the side of such handsome books as the Parks and Gardens of London. The text is a happy blending of the cultural, the literary and the artistic. There is much that will help the enthusiastic lover of outdoor garden plants to embellish his borders with showy and effective subjects, and some of the pictures might well be taken as models of floral art to be copied in their entirety. We like the book very much, and it will be the companion of many a quiet hour when thinking out color schemes for our perennial border. Price, \$4.00.

A Practical Guide to School, Cottage and Allotment Gardening, by John Weathers. This is a most commendous little handbook, brimful of matter relating to the subjects mentioned in the title. A neatly gotten up volume, octavo in size of 248 pages, bound in cloth cover, it is at once a cheap and useful volume for the owner of small gardens or plots of ground cultivated or allotments. A useful book and one that will serve its purpose well. A few line engravings illustrate the text. Price, \$1.00.

Le Comte Oswald de Kerchove de Denterghem, by Albert Centerick. A very interesting and well gotten up small quarto devoted to the life and work of the late president of the Royal Agricultural and Botanical Society of Ghent. A distinguished lover of horticulture and a writer of no little repute, the Count was one who always offered the greatest hospitality and the warmest of welcomes to like-minded visitors to the famous Ghent shows. M. Centerick, the secretary of the Ghent Society, has evidently done this book as a labor of love and of regard for the man whose loss was universally deplored at the time of his decease. There are several interesting pictures that adorn the pages of the book, not the least important of which is a portrait of the Count de Kerchove after the painting by M. Lefebvre. Much information concerning the rise and progress of the society and its great exhibitions is given. In the conclusion we notice a picture of the statue erected to the count's memory by public subscription, a list of the founders of the society, a list of the plants shown at the first exhibition in 1809, lists of various officers and also of the various works written by the Count. There is also a list of the International Committee for raising the funds for the monument and a list of the subscribers. No price is given. The book was presented to members of the jury at the recent Ghent Quinquennial and to members of the International Committee.

Dahlias and Their Cultivation, by J. B. Wroe. The writer deals with the dahlia firstly as an exhibition flower, then as a flower for garden decoration in both branches of culture, the fullest details being given. There are very few recent treatises on dahlia culture in England, and the book should meet with a ready acceptance by the growers, of whom there are many in this

country, especially since the advent of the cactus varieties. We like the neat little typical pictures of the various sections, which is a happy idea on the part of the author, for florists' distinctions in flowers are not always well conveyed in verbal descriptions. Selected lists of varieties for show and for the garden are supplied. As a cultural manual it is a useful little book, but Mr. Wroe in his opening chapter, entitled the evolution of the dahlia, somewhat startles us when he says in his first few lines, "Information available for the history of the dahlia is not as plentiful as we could wish." If Mr. Wroe knew the literary aspect of the dahlia as well as he knows the cultural he would hardly have started off with this rather amazing statement. There is probably as much information available for the history of the dahlia as there is for any other flower, if you know where to find it. Price 50 cents.

Essais sur l'Histoire de Quelques Fleurs d'Ornement. L'Oeillet, by Le Texnier. Here we have an author who unlike the preceding has nothing to say about culture but everything about history. M. Le Texnier is writing a series of books on the history of florists' flowers. The first was rather a bare historical record of the chrysanthemum, the next is that we now notice and is devoted to the carnation and its kindred flowers. This little brochure is in French and consists of 49 pages brimful of historical and literary details relating to the carnation from the earliest times. As a favorite flower it was cultivated in France three centuries ago, and there exists in French horticultural literature quite a number of important treatises beginning from the middle of the 17th century downwards. Some of our modern English authors would do well to consult these old authorities before they start at the work of building up a history of the flower, for its history is a far wider one than is confined to its culture in England. We should have much liked M. Le Texnier to have added a carnation bibliography to his little book which, interesting and valuable as it is from a historical point of view, would have been materially enhanced by this suggested addition. Quite recently we bought in Germany a finely drawn picture of an old carnation grown there in 1628. It is a lifelike study of a rich crimson flower with notched edges and about four inches in diameter. The name of the variety was Gross Roth, and in spite of all our progress today it is evident from this drawing that the old florists knew something about carnation growing. Price 25 cents.

C. HARMAN PAYNE.

## Well

BETWEEN YOU AND ME, What do you think of the Buyers' Directory and Ready Reference Guide of HORTICULTURE? I always look it over before I do any buying

### NORTHERN GROWN COTTON.

For many years, the late superintendent of public grounds of Boston, Mr. William Doogue, used to grow among other economic plants, a few hundred cotton plants. These were pot-grown and started early in the year in the greenhouses and later placed in the Public Garden where they never failed to give great pleasure.

The purpose in growing these plants was that they might be distributed in the fall to the different schools as an object lesson for the pupils. In this Mr. Doogue was never disappointed in results as the hundreds of letters, both from the teachers and children, testified.

How the Cotton is sent to the schools.

The first lot was sent around in boxes, with a number of ripened bolls in each but in each succeeding year entire plants were distributed, a number to each school. Mr. Nelson of the Lowell Textile School wove several pieces of cloth appropriately inscribed from some of the product.

Another attractive feature along these lines was a bed of coffee plants, some in fruit and others in flower with a ground of pineapples in fruit

### A NORTHERN ENTERPRISE.

The Elmwood Select Nursery of Painesville, Minn., is, I think, the northernmost of any nursery of importance in our northern states.

Really, it is an outgrowth of the York Select Nursery. It was found, as business opened, that the springs were so much earlier in Nebraska than in Minnesota and the Dakotas that it was necessary to have a branch further north. The enterprise is connected also with the S. Dakota Experiment Station under the care of Prof. N. E. Hansen.

Hansen's Dakota No. 2 strawberry, a cross between Glen Mary and North Dakota Wild, proves hardy without mulching in Manitoba. It is a fruit of promise, too soft to ship yet, quite productive and of tremendous vigor, fighting its way with weeds, heat or cold—the very thing for the farmer who cannot give his strawberry bed the attention it needs. Hansen's Sunbeam Raspberry is a cross between a Manitoba mild red raspberry and Shafer's. It is very hardy and a good bearer. His fourth generation of Northern sand cherries gives good promise also. The Northern type of the Hippophae rhamnoides—the Siberian Buffalo berry—one of the most prolific fruits ever seen on tree or bush, is proving a success.

In the matter of evergreens we found we could not raise the finer sorts in the hot climate of Nebraska, but by going into the hazel brush thickets and poplar groves of that cooler climate and sowing in the leaf mould, Mr. Brown has had phenomenal success, and is raising the pungens, Jack pines and spruces by the hundreds and thousands. White and Black Hill's spruces grow much faster and have a richer color than those grown in Nebraska.

The colors in peonies are richer, and the flowers much finer than in the hotter air further south, and we have by careful experiments in Minnesota and Manitoba demonstrated the fact that the peony is as hardy as peil plant or horseradish, and that all the hardy perennials find a most congenial climate in all those northern regions.

It is a matter of rejoicing that those homes on the bleak prairies can be beautified by the fairest flowers that bloom. We are now sending out perennials to be tested through Manitoba and Alberta, and are beginning to have cheering accounts of their success.

C. S. HARRISON.

# A WONDERFUL NEW NEPHROLEPIS

## Nephrolepis Superbissima

INTRODUCTION OF 1908

**W**E desire to call attention to this new fern, which originated with us and which we are introducing this year. It is a **very unique and distinct novelty** — as distinct from *Nephrolepis Piersoni* and *Piersoni elegantissima* as they were from *Bostoniensis*. It is in fact a complete break. The fronds are very heavily imbricated, the pinnae overlapping, making the fronds very dense and compact.

It differs from the other *Nephrolepis* not only in form, but also in color, being a **richer and darker green** — entirely different from the yellowish green of all the other *Nephrolepis*. The plant is very sturdy in its habit, the fronds never breaking down.

While a photograph shows a similarity to its predecessors, it is absolutely distinct, not only in the formation of the fronds and color, but also in its habit and general characteristics. It makes a much more dwarf and compact growth, the fronds being very dense, firm and rigid, and having a great deal more substance, so that it will stand more knocking around than any other fern of this type.

It is a sterling novelty. Experts who have seen it consider it by far the best fern ever sent out. It is a plant that needs to be seen to have its great value and sterling qualities appreciated. It really is not in the same class with the other varieties. It was awarded a

### ... FIRST-CLASS CERTIFICATE ...

by the Royal Horticultural society at Crystal Palace in London, November, 1907, the plants exhibited there having been shipped from New York two weeks before that time. After being exhibited in London, the same plants were shipped to Edinburgh, Scotland, where they were again awarded a first-class certificate by the Scottish Horticultural Society. This will indicate the value of the plant as a novelty, and also demonstrates in a very conclusive manner its fine keeping and shipping qualities. We have just begun shipping advance orders, and new orders can now be shipped immediately on receipt.

*Do not fail to see our exhibit at the S. A. F. Convention, Niagara Falls.*

Fine, strong plants, 2¼ inch pots, \$5 per dozen, \$35 per 100; 4 inch pots, \$7.50 per dozen, \$50 per 100; 6 inch pots, \$1.50 each, \$15 per dozen.

**F. R. PIERSON CO., Tarrytown-on-Hudson, New York**

#### OBITUARY.

James Patterson.

James Patterson, landscape gardener, died at his home in Arlington, Mass., on July 25. Mr. Patterson laid out the grounds of the Pratt estate, afterwards under the care of the late David Allan, and now occupied by the Oakley Country Club. He was born in Scotland in 1833 and came to this country about fifty years ago. Besides the Pratt estate, his most extensive work was done on the Summer estate in Jamaica Plain, and the Gray estate in Cambridge. Mr. Patterson is survived by a widow, who has been blind for a number of years.

Mrs. Magdalene Meinz.

Magdalene, wife of Henry Meinz of College Point, N. Y., died on July 12.

Alexander Craw.

Alexander Craw, deputy horticultural commissioner of California for many years, died at Wawona, on June 28.

#### NEWS NOTES.

W. H. Schuyler will discontinue his flower store at 531 Van Buren street, Chicago.

H. W. Metz & Co., 252 Ashland boulevard, Chicago, have dissolved partnership. Mr. Metz will continue the business.

Prof. William Trelease of the Missouri Botanical Garden, St. Louis, has issued invitations for the nineteenth annual banquet to gardeners, florists and nurserymen provided for under the will of Henry Shaw, to be given at the Mercantile Club on August 12.

## PUBLICATIONS RECEIVED.

The French Garden, by C. D. McKay, F. R. H. S.—This little book of sixty-two pages, neatly bound in cloth and with nine full-page interesting half-tone illustrations, seeks to enlighten English market gardeners on the methods pursued by their fellow cultivators across the channel. For long there has been a demand in England for French "Primeurs" because they appeared in the markets at seasons when young vegetables of home production did not exist. The aim of the writer is to show how by the use of hot beds and bell glasses or "cloches" a supply of young vegetables and fresh salads may be grown in England the year round, and the vast sums annually sent to France in payment of such delicacies secured hereafter to the English producer. Mr. McKay's book is far from being a complete manual of the French garden, yet it says enough to stimulate farther inquiry, and we believe its mission in arousing interest in the cultural methods of the French will be successful.

## TUNICA SAXIFRAGA FL. ROSEA PL.

McHutchison & Co., New York, are now distributing for the Royal Tottenham Nurseries, Dedemsvaart, Holland, the new and beautiful hardy perennial *Tunica Saxifraga fl. rosea* pl. This plant resembles a saxifrage of the mossy section, bearing double pink gypsophila-like flowers from May until autumn. It is equally good as a rockery border or pot plant, is a thrifty grower and perfectly hardy.

## THE UBIQUITOUS BROWN TAIL.

We learn from the columns of a contemporary that a host of white moths has visited New York during the past week, and that "in the hope of destroying them before they lay their eggs the park department has resorted to vigorous spraying of the trees where they most abound." We trust the park department of the Metropolis knows better than to spray trees, expecting this to have any effect on flying moths.

Concerning the invasion of brown-tail moths in Halifax, N. S., recently noted in this paper, Halifax papers say that although the moths are greater in numbers than any arrival of pests for some time, the agricultural authorities have little fear of any dangerous infestation, because of the remarkable feature that practically all of the moths are males, an examination of 500 disclosing not a single female.

## Seed Trade

Important information concerning California seed crops was given in a recent issue the same being a summary of numerous reports from reliable sources and this information can be relied on as accurately stating conditions at the time it was published. The important fact must not be overlooked however, that most crops may improve or deteriorate materially before harvest.

As to peas, that crop is now practically made and while deterioration is possible there is very little chance for improvement. It must always be borne in mind that no crop is safe until housed, as many excellent crops have been ruined after maturity by unfavorable weather.

It is probable that onion seed has reached a stage where little improvement can be expected, but the crop may yet be heavily damaged by hail, rain or wind. There are few seed crops likely to make much improvement after August 1st, excepting corn and possibly vine seeds, but as already stated there is ample time for damage.

Information to hand recently, shows that corn in the West has made considerable improvement during the past two or three weeks and if killing frosts hold off until the middle of September or later, there is a prospect of a very fair corn crop. The condition of vine seeds is not altogether satisfactory but with favorable weather fair average yields will no doubt be secured.

There seems no doubt about garden beets being on the short side and such varieties as Detroit, Turnip, Crosby's Egyptian, Stinson, Crimson Globe and a few other specialties, will undoubtedly rule higher than for several years past.

In Connecticut the corn crop is looking very well considering the extreme drought which has prevailed throughout the greater part of New England for many weeks past and although no serious damage has yet been noted, rain is very badly needed, for without rain the kernels are generally more or less imperfect. The heavy rains of the past week have undoubtedly done much good and possibly the long drought may have been at last broken, if so, and the improvement noted in the Western crop continues up to harvest, sweet corn will be fairly abundant and prices will not rule much, if any, higher than usual.

## GIGANTIC PANSIES

Can only be produced from the **Giant Strains**. Our **CHALLENGE PANSY** seed contains only the **Giant** self colors, the **Giant Striped** and **Variegated** and the **Giant Blotched**, all carefully mixed in proportion. You could not buy better seed if you paid **\$100 per Ounce**.

## ONION, LETTUCE, SWEET PEAS,

— ALSO —

Carrot, Celery, Leek, Mustard, Parsley, Parsnip, Radish, Salsify

There are reports that the radish seed crop in France will be short, but it is said that the English crop will be above average this year. However, this will not help matters much as those who are accustomed to using the French seed will be reluctant to use the English-grown article except in case of great necessity.

Referring again to peas there is very little doubt that the Canadian crop this year will be a very light one, but it is generally believed that the crop grown on this side of the line will at least be as large as last year and it is earnestly hoped considerably larger.

At the present time it is quite impossible to make estimates and only general conditions can be given, but just as rapidly as the situation develops, the facts will be given in HORTICULTURE.

A letter recently received from Lewis  
Henderson, Omaha, Neb., says:  
"There is not much doing in the busi-  
ness line this month; everything is  
quiet, after one of the most prosperous  
spring trades we ever had."

The use of small ferns for jardiniere  
and basket work has increased enor-  
mously of late years and is still grow-  
ing. Fern growing from seed is now  
a specialty with some establishments,  
and there is a well-defined list of  
varieties particularly adapted for flor-  
ists' use because of their tough tex-  
ture and ability to withstand rough  
handling and exposure. We have  
some tempting fern offers in the ad-  
vertising columns of this issue. Look  
them over.

#### PERSONAL.

Visitor in Omaha: J. F. Wood, Providence, R. I.

Wm. M. Trefenger has taken a position with James Hayes, at Topeka, Kas.

Henry Jacobs, of Peoria, Ill., has changed from J. C. Murray's to D. U. Augspurger & Sons.

Thomas Hooper has accepted the management of the Domoto Bros.' greenhouses at Fruitvale, Cal.

Visitors in Boston: Wm. F. Wight, U. S. Deputy of Agriculture, Washington, D. C.; J. De Buck, College Point, N. Y.

John Isaac, of Sacramento, for many years secretary to the state commissioner of horticulture, has resigned his position.

Park Commissioner James Wilson and Alderman R. C. Vaughan of Toronto, Ont., are in Boston, inspecting the metropolitan and city parks and playgrounds.

William and Alfred Altman, of Manitowoc, Wis., have removed to Ogden, Utah, where they will join their brother Reinhardt in the wholesale flower business.

Visitors to Chicago: Louis Russos, of Madison, Wis.; J. Anderson, of Kenosha Greenhouses, Wis.; Mrs. C. D. Stratton, of Lancaster, Wis.; G. L. Grant and Mrs. Grant, Soquel, Cal.

Richard Eichling, the newly-elected president of the New Orleans Horticultural Society, was the recipient of a handsome dinner set from the Society on the occasion of his recent marriage.

A card from J. F. Huss of Hartford, Conn., who is now visiting his old home in Switzerland, informs us that on July 20 they celebrated the 88th birthday of his mother, who is still in splendid health.

We have just learned of the marriage of Mr. Michael Ford, of Ford Bros., wholesale florists, New York. We do not know the former name of the fortunate Mrs. Ford, but that is now of no consequence.

Chas. R. Panter, who for several years has held the office of secretary of the New Orleans Horticultural Society, has been appointed secretary-treasurer of the Board of Trustees of the Southern University by Governor Sander.

Thomas H. D. Howden, of Whitinsville, Mass, gardener for A. F. Whitin,

sailed on the S. S. Caladonia from New York on July 25 for his old home, Glasgow. He has planned an extensive continental trip.

After a litigation of about eighteen months the second codicil of the will of George Ellwanger, the pioneer nurseryman of Rochester, N. Y., has been denied probate, and in consequence Helen C. and Margaret Ellwanger, contestants and granddaughters of the deceased, will receive about \$250,000 instead of being cut off with a small share.

Mr. Takafusa Shijo, commissioner of forestry and secretary of the department of Agriculture, and Dr. K. Imi-jauchi, of the department of Agriculture, Tokio, Japan, were guests of W. Atlee Burpee & Co., at Fordhook Farms, Doylestown, Pa., last week. These gentlemen are making a tour of observation in behalf of their government.

Philip Breitmeyer's admirable administration of Detroit's park system is apparently fully appreciated by his fellow citizens. We regard him as a most excellent candidate for the office of mayor of the city of Detroit. Ability, affability and upright character and plenty of common sense are among Mr. Breitmeyer's qualifications, and if elected, he will do credit to himself, his city, and the business which he represents.

Horticulturists connected with various state experiment stations are inspecting the fruit orchards and vineyards of Ontario County, New York, and the Keusa Lake region. Included in the party are F. C. Reimer, of North Carolina; C. I. Lewis, of Oregon; R. S. McIntosh, of Alabama; J. P. Stewart, of Pennsylvania; R. E. Vaughan, of Vermont; A. E. Stene, of Rhode Island; R. A. Emerson, of Nebraska; W. S. Brown, of Indiana; M. G. Kains, of New York City; A. P. Hendrick and Dr. W. H. Jordan, of Geneva, N. Y.

The following Chicagoans are spending their vacations as indicated: Mr. and Mrs. August Poehlmann are in Wisconsin. O. W. Frese is in Wisconsin. George Poehlmann of Poehlmann Bros. has returned from Wisconsin. Peter Miller, with Kennicott Bros., has returned from Indianapolis. M. Frink will spend his vacation at Lake Geneva. E. Pieser, of Kennicott Bros., and Mrs. Pieser will take an extended trip to the Adirondacks. Mr. and Mrs. Anton Then will pass their vacation with friends on a fruit farm

at St. Joseph, Mich. Lieut. J. Edwin Hauswirth will return this week with his cavalry company from their annual outing.

#### HANDY HANDBOOK.

Handy Hand-Book of Greenhouse Material, just issued by the Lord & Burnham Company, is a very complete illustrated catalogue of every device and fitting, large and small, which go to make up the modern greenhouse, piping, heating and ventilating included, as well as benches, gratings, sash, and all the tools needed for repairs at short notice. The materials are all classified, grouped and indexed for ready reference. It is a handy hand-book, in fact. Any reader of HORTICULTURE can have a copy by writing to Lord & Burnham Company. Accompanying it is a hook enclosed in a small envelope, on which to hang the book.

#### NEWS NOTES.

A fire early in the morning of July 27 caused a loss of about \$150 to the greenhouse of James S. Powers, Lancaster, N. H.

The safe was robbed last Friday at George Saltford's, 43 W. 28th street, New York. We have a poor opinion of the burglar who would waste his time on a florist's safe in mid-summer.

## FLOWER MARKET REPORTS

**BOSTON** The character of stock coming into the market is now undergoing a change.

One sees scarcely any carnations, and many outdoor flowers characteristic of the early summer are no longer in evidence. Asters, purple, pink and white, of fairly good quality, are taking the place of the departed things and will soon occupy the front seat in the public eye. Roses are still very diminutive in size, but they are clean and healthy looking as a rule, and growers are evidently giving them careful attention. Prices are not yet advanced any, but there is a perceptible freshening up of the demand from various points, and it now looks as though the worst was over.

**CHICAGO** The cut flower market is holding its own; compared with last July it even has its encouraging features. The quality of the carnations is excellent, color and size being well maintained. Roses are sufficient to supply the demand and American Beauties are showing longer stems. The market is full of lilies of all kinds. Auratum and longiflorum bring good prices; there seems to be less call for album and rubrum and really good stock sells slowly. Asters show longer stems and consequently sell better. Sweet peas are feeling the hot, dry weather and many come in in poor condition. Some of the trade are finding that their books show an increase in July sales over last year, while June sales were below.

**INDIANAPOLIS** There is not a great deal of life in the business just now, though the receipts in some lines are fairly heavy, particularly American Beauties, lilies and gladioli. The roses average an indifferent grade. Strictly fancy stock is available for small lots only. Carnations are getting poor and scarce. Gladioli have almost reached summer value, though a few of the novelties are yet bringing good figures. There are some asters coming into the market, but the long spell of dry weather has been sadly against them.

**NEW YORK** This centre of activity continues to be only so in name. There is practically nothing worth reporting in the wholesale trade. Early closing is in vogue, and it is not easy to find anyone on deck in the afternoon. Stock is coming in with moderation as yet, but there are evidences that the receipts of roses will soon make a considerable increase, while asters and gladioli already begin to accumulate. Dahlias are also imminent. There are very few carnations. Cattleyas are scarce, and there is a market for all that appear. First-class Beauties are also good stock to have. Kaisersins take the lead in white roses as to quality and Killarneys in pink as to quantity.

**PHILADELPHIA** Conditions have improved slightly the past week, being quite in contrast to the regular order. Lily of the valley sold well, and other white flowers also were in active demand. The aster crop is getting more plentiful and has improved greatly in quality. The welcome rains of the past ten days have been especially beneficial to the second early aster crop. Carnations at the present time are very few and very poor. Some good new crop American Beauty roses are arriving. This applies not only to local but northern grown, the advance of farther north being now lost. Richmond is far too single to make a good summer rose, and Liberty is also below par. The cooler spell consequent on the rains is already showing on Kaisersins, which have improved greatly. Many growers cut back their old Killarneys some time ago and a very fair stock is now being marketed. Cattleyas continue scarce. Speciosum, auratum and longiflorum lilies are in fair supply and selling well. Lilium philadelphicum and tigrinum are also

conspicuous. Among the minor items are tritonas, gladioli, golden glow, phloxes and tuberoses.

Reports from Detroit indicate that business is moving along quietly, with an average ahead of last year. The demand for cut flowers for yachting parties is beginning to cut quite a figure.

### BUSINESS CHANGES.

Hugo Rudolph has purchased the business of C. F. Altman & Sons at Manitowoc, Wis.

The stock of W. H. Henderson has been sold to Mrs. R. Henderson, of Cedarville, N. J.

Espelin & Warren, Fort Collins, Col., have bought the business of the Fort Collins Floral Co.

Leland G. Watkin and John Canfield have bought the greenhouses of A. A. Weldon at Berlin, Conn.

Hunt Bros. (Fred G. and H. H.) succeed to the business of Ahrenfeldt's greenhouses. Park Ridge, Ill.

Alexander Common will transfer his florist business from Woodward avenue, Detroit, to 412-414 Grand River avenue at an early date.

Albert Senger has leased the Hicks' Greenhouses, St. Louis, Mo., and will continue the business there in addition to his present establishment at Cote Brilliant avenue.

The Chase Nursery Co. and the Alabama Nurseries Co., Huntsville, Ala., have consolidated and the name of the former has been retained. Henry B., Robert C. and Charles Chase compose the new firm.

J. B. Opitz will discontinue his store on 6th street, Chicago, and give all his time to his places at 3026 Cottage Grove avenue and 3030 Indiana avenue.

### Bostrom Improved Builders' Levels and Farm Levels

For Park, Cemetery and Landscape Gardening use, take the place of expensive Engineering Instruments. Simple in construction, easily adjusted, more substantial and less cumbersome than the more elaborate and complicated instruments. Practical, up-to-date instrument that any one can use. Write for descriptive circulars and be convinced that this Level is necessary to complete your outfit. Builders' Level \$25.00. Farm Level \$15.00.

# Your Catalog Postage Is 8 Cts. Lb. Do not be "PENNY WISE & POUND FOOLISH."

It costs more to mail CHEAP PAPER than GOOD PAPER because GOOD PAPER is LIGHTER for equal bulk and LESS TRANSPARENT.

It costs more to use CHEAP PAPER Because IT LOOKS CHEAP, and Brings Poor Results. BEST PAPER Brings BEST RESULTS.

Our B. P. F. PAPER IS BEST Because it Combines the Qualities YOU NEED for YOUR Catalog. Specify WHEELWRIGHT PAPER. Samples sent on request.—Dept. C.

### GREENHOUSE CONSTRUCTION LUMBER

**John C. Moninger Co.**

117 E. Blackhawk St., CHICAGO

PATENT APPLIED FOR

### Why My New Curved Iceless Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars incased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: Result, the driest roof ever used for greenhouse purposes.
- 4th. **THE MOST IMPORTANT OF THEM ALL.** The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

**William H. Lutton,** Horticultural Architect and Builder  
West Side Ave Station (C.R.R. of N.J.) Jersey City, N.J.

### The Advance Ventilating Apparatus

Our new pipe couplings makes the work of coupling up the shafting pipe an easy task. Beats anything on the market. We have other good practical things in our line that our patrons appreciate. Best of material, superior principles, ease of operation and erection, makes it popular everywhere. Give us a trial. You will come again. They all do.

**The Advance Co.**

THE DEEP CROSS FIRE  
CHANNELS WITH SIDE  
FLUE OPENINGS.

### THIS FEATURE FOUND IN "BURNHAM" BOILERS ONLY.

And it is just these cross fire channels, with side flue openings, that goes a long way towards making it the wonderful fuel economizer it is. These channels prevent the rush of burning gases from front of boiler directly to the back, and so makes each section *equally efficient*. Of no other cast iron boiler is this a fact. It is the only boiler that has grown up in the greenhouse business — the only cast iron boiler made especially for greenhouse work.

# A WONDERFUL NEW NEPHROLEPIS

## Nephrolepis Superbissima

INTRODUCTION OF 1908

**W**E desire to call attention to this new fern, which originated with us and which we are introducing this year. It is a **very unique and distinct novelty** — as distinct from *Nephrolepis Piersoni* and *Piersoni elegantissima* as they were from *Bostoniensis*. It is in fact a complete break. The fronds are very heavily imbricated, the pinnae overlapping, making the fronds very dense and compact.

It differs from the other *Nephrolepis* not only in form, but also in color, being a **richer and darker green** — entirely different from the yellowish green of all the other *Nephrolepis*. The plant is very sturdy in its habit, the fronds never breaking down.

While a photograph shows a similarity to its predecessors, it is absolutely distinct, not only in the formation of the fronds and color, but also in its habit and general characteristics. It makes a much more dwarf and compact growth, the fronds being very dense, firm and rigid, and having a great deal more substance, so that it **will stand more knocking around than any other fern of this type.**

It is a sterling novelty. Experts who have seen it consider it by far the **best fern ever sent out.** It is a plant that needs to be seen to have its great value and sterling qualities appreciated. It really is not in the same class with the other varieties. It was awarded a

### ... FIRST-CLASS CERTIFICATE ...

by the Royal Horticultural society at Crystal Palace in London, November, 1907, the plants exhibited there having been shipped from New York two weeks before that time. After being exhibited in London, the same plants were shipped to Edinburgh, Scotland, where they were again awarded a first-class certificate by the Scottish Horticultural Society. This will indicate the value of the plant as a novelty, and also demonstrates in a very conclusive manner its fine keeping and shipping qualities. We have just begun shipping advance orders, and new orders can now be shipped immediately on receipt.

*Do not fail to see our exhibit at the S. A. F. Convention, Niagara Falls.*

Fine, strong plants, 2½ inch pots, \$5 per dozen, \$35 per 100; 4 inch pots, \$7 50 per dozen, \$50 per 100; 6 inch pots, \$1.50 each, \$15 per dozen.

## British Horticulture

### THE CULT OF THE SWEET PEA

Further evidences of the great strides made in the development of the sweet pea were afforded at the annual show of the National Society, at the Royal Horticultural Hall, Westminster, on July 24th. Favorable reports had been received from various parts of the country as to the condition of the blooms, and there was a full entry. An alluring array of prizes, including several championship trophies, stimulated a keen competition. A good batch of novelties was submitted for the certificates granted by the Floral Committee. The decorative section was particularly interesting in furnishing object lessons of the value of the sweet pea for effective table adornment. It is during the last thirty years that the remarkable advance has been made in the sweet pea. In 1837 a firm of seedsmen in London were offering five varieties; these now number several hundred. Scarlet Invincible, which was raised by Mr. S. Brown, of Sudbury, was the first variety to be seen by the Royal Horticultural Society, a first-class certificate being granted in 1865.

### MODERN DEVELOPMENTS

The flower which erstwhile found a modest corner in the artizan's garden has within the last few years developed into a floral favorite, in whose honor special shows are held in various parts of the kingdom, and whose admirers form an international freemasonry by their kindred aims. At various provincial centres clubs have been started amongst the artizans for furthering the culture of the fragrant sweet pea. One has only to visit the trial grounds of well known seedsmen at Reading or in Essex to realize the striking evolution which has taken place in this increasingly popular flower. Here can be seen some of the forgotten fancies of 20 years ago, whose lack of size was made up by the length of name. In contrasting the old and new, the visitor is struck by the tremendous advance in form, texture, color and floriferousness of the modern introductions and there is an added gracefulness which lends a high degree of effectiveness to their decorative value. The raising of new varieties has gone ahead with such celerity that one firm alone grows over 300 different sorts on their trial grounds, these being in 550 rows which, if placed end to end, would reach a distance of over two miles.

### THE NEW SECTIONS

The new waved form marked an interesting departure. The first of this series was Countess Spencer, with graceful waved standard and wings, this having been raised by Mr. Silas Cole, head gardener to Earl Spencer, Althorp Park, Northampton. From this variety other fascinating novelties have been evolved, and have gained many honors on the show table. In recent years the Cupid sweet peas, the dwarf-growing section, have been introduced from America, and these are found useful for raised beds and rock gardens. To America we also owe the newer winter-flowering section. Mr. A. Zvolanek, of Bound Brook, has the credit of being the first to secure a variety that provided a welcome blaze of color at Christmas-time. Mr. Engelmann has

paid attention to this section, and in dull December he makes a gay display of bloom in his greenhouses. The Rev. E. Arkwright, of Algiers, sometime ago discovered that some of the sweet peas had a tendency to flower early. By a process of selection he was able to have varieties which flowered in December from the September sowing. Some of these have been experimented with in England, where they have flowered under glass early in the New Year.

### THE NATIONAL SOCIETY'S WORK

Useful work in the interests of the flower it represents has been accomplished by the National Sweet Pea Society, which was founded after the bi-centenary celebration at the Crystal Palace in 1900. In addition to the successful shows organized in London and the provinces, the Society has rendered a praiseworthy service in the holding of trials of new varieties at the University College Gardens, Reading. These trials are useful in enabling the committee to select the best varieties in the respective color sections, to place their "hall-mark" on the most meritorious kinds, and to bracket the synonymous varieties. The Floral Committee at the London show restricted their awards in the novelty section to those which have been inspected in cultivation this summer at the Reading trials. This prevented an award being given to a variety which has not been properly fixed, for amongst the newer race there is a great tendency to "sport."

The National Society recommends the following as the best in their colors: White, Dorothy Eckford and Nora Unwin; crimson and scarlet, King Edward and Queen Alexandra; rose and carmine, John Ingman; yellow and buff, Mrs. Collier; blue, Lord Nelson and Romolo Piazzani; blush, Mrs. Hardcastle Sykes; cerise, Coccinea; pink, Countess Spencer.

There is now a wide variation of tints from which a choice can be made, whilst the long, stout stems are found extremely advantageous for decorative purposes. The warmer tones of color show up to perfection under the artificial light. What the future has in store for those who are experimenting with this subject affords wide scope for speculation. It may be that before many more seasons have given their gay contribution to the garden the long-looked-for yellow, akin to the tint of *Coreopsis grandiflora* will have gladdened the heart of some painstaking hybridiser.

*W. H. Adsett.*

In recent issues of *HORTICULTURE* a considerable amount of news space has been given over to accounts of outing festivities, club picnic games, recreation trips and holidays and we shall presently be called upon

to make report on the sporting contests scheduled to take place at what many of our readers regard as the great national vacation trip of the year—the S. A. F. convention at Niagara Falls. The story of these diversions may be said to lack in the element of practical education which, it is generally conceded, must be a prevailing component in the reading matter disseminated by an influential technical or trade journal. In recording these pastimes, however, we recognize a proclivity which is strongly developed in the typical gardener or florist and which when business cares are relaxed finds its fullest expression amid verdant surroundings in happy fellowship with one another and with Nature in her most charming aspects. It is fitting that Nature and the horticulturist should be boon companions in vacation hours as well as fellow-laborers when work is to be done, "and therefore let's be merry."

Among the pursuits in which men are engaged none, perhaps, touch so intimately on the green-woods and fields and rural associations and delights as does

that of the horticulturist and it is an open question whether there may not be some danger of perverting the original intent of our florists' picnics by the prominence which has been given of late to athletic games and contests as a part of these affairs. Not that the games in themselves are undesirable but that the tendency to make them the chief feature of the outing may tend to eliminate from these annual holidays their real sentiment and main charm as "outings" and that the lavish distribution of trophies of considerable intrinsic value may possibly stimulate an undesirable mercenary spirit among the contestants especially when judges' decisions are followed by protests and misunderstandings as occasionally happens. Let us see to it that the primary purpose of a day of quiet enjoyment for all—old and young, whether interested in games or not—is assured. And possibly we may yet come to the conclusion that a bit of blue ribbon duly inscribed may be a more suitable award for pre-eminence in jumping or running than a watch or a five-dollar gold piece.

Our cover illustration affords a view of the central meadow, two hundred acres in extent, at Franklin Park, Boston. As the picture shows, the ground is rolling and, with the exception of a few scattering trees, it presents a surface of simple turf which gives a pleasing foreground for the wooded borders. From the elevations of Scarboro and Schoolmaster's Hills which adjoin this fine meadow many beautiful views can be obtained across its ample expanse. The sheep add a pastoral effect of great value in a landscape where quiet

simplicity is the dominant feature. This meadow is also used for golf links. We present this view as a contrast to the park scenes generally published. While devoid of any effort at horticultural effect the picture will inspire an appreciative response in the cultivated mind. During the coming week the American Park Superintendents will be in session at Minneapolis. No department of our art calls for greater intelligence and culture than theirs. To be able to link harmoniously the beauty of cultivation and studied adornment with such scenes of spontaneous simplicity as our frontispiece depicts, without weakening the impressiveness of either, calls for talents of a high order. The park superintendent is constantly being called upon to "sacrifice quality to novelty and real excellence to uncertain worth" and it is greatly to the credit of the men who stand at the head of our many magnificent public reservations that so much of natural beauty has been preserved.

## Notes from the Arnold Arboretum

As one of the most showy trees of the late summer *Rhus semialata* var. *Osbeckii* is to be named; it is a low tree with a broad spreading head resembling somewhat that of the southern Umbrella-tree. In bloom, when covered with its broad and dense panicles of creamy white flowers, it is certainly the most conspicuous of the Sumacs in cultivation though in fruit and in the autumnal coloring of its foliage it is not so superior to all. The leaves assume only a pleasant brownish red color in fall and the fruits resemble those of the Staghorn Sumac, but are less brilliant in color.

A tree somewhat similar in habit to the preceding but lower is *Koeleruteria paniculata* which is now showing its terminal open panicles of yellow flowers; they are not particularly showy, but for variety's sake are welcome at this time of the year. The tree is not perfectly hardy in this neighborhood and suffers in more severe winters.

Another late flowering tree is *Sophora japonica*. The rather small whitish flowers are arranged in large and lax panicles and open in succession during several weeks. For this reason they do make a great show, but the loose whitish panicles contrast pleasantly with the dark green foliage which remains unchanged on the tree until frost sets in. It is a round-headed tree reaching fifty or sixty feet in height, is perfectly hardy and stands drought well, which makes it the more valuable. The peculiar pendulous variety which is sometimes planted is a little more tender. Of late several closely related forms and species have been introduced, but the plants have not yet flowered and are still too small, to make it possible to form an idea how their ornamental qualities will compare with *Sophora japonica*.

One of the handsomest of the late flowering shrubs is the Rose of Sharon, *Hibiscus syriacus*, which is begin-

ning to bloom and will continue until frost sets in. There are a great many varieties in cultivation with purple, bluish, white and rose colored, single and double flowers; one of the prettiest is a form with double white flowers which is now blooming at the Arboretum. Unfortunately the shrub is not perfectly hardy, but in a warm and sheltered position will stand even severe winters.

With its large and open panicles of small purplish flowers *Lespedeza bicolor* is a very handsome shrub of graceful habit reaching about six or ten feet in height. It is hardier than the later flowering *L. Sieboldii* (*Desmodium penduliflorum*) and to be recommended for sunny borders of shrubberies; it stands drought well.

The Heather, *Calluna vulgaris*, with its slender spikes of rosy red flowers is only effective when planted in masses so as to carpet the ground; it grows well in sandy, rocky or peaty soil and may be used for borders of groups of Rhododendrons or other Ericaceous plants. Cut flowering branches keep their life-like appearance in a dry state for many months. There are several varieties in cultivation of which the var. *alba* with white flowers is one of the most desirable to add variety.

*Clematis tangutica* of which the feathery fruiting heads were mentioned in the issue of July 25 is now flowering a second time. Though the nodding yellow flowers are large and handsome, they are not as showy as other large-flowered Clematis, since they are tubular in shape.

The fruits of *Viburnum Opulus*, or as it is perhaps more correctly called *V. americanum*, are assuming a yellow or orange yellow color and will be from now until next spring among the most conspicuous of the ornamental fruits. *Viburnum Lantana* has for a short time bright red fruits which, however, are already beginning to take on their final bluish black color. Fruits of similar color but without first changing to red are borne by *V. pubescens*. More conspicuous are the dark blue fruits of *V. dentatum*.

The branches of *Elaeagnus multiflora* are now thickly studded with dark red fruits of about pea-size, while the larger pendulous fruits of *E. longipes* are beginning to shrivel. *Elaeagnus multiflora* is often confounded with *E. umbellata* which ripens its fruits still later and has a more silvery looking foliage.

*Colomastix integerrima* (*C. vulgaris*) is very handsome with its bright red fruits; it is a low shrub which stands drought well and is particularly adapted for rocky slopes.

*Lonicera Martiana* is much handsomer now with its nodding glossy scarlet fruits than with its rather insignificant violet flowers. Another of the later fruiting Honeysuckles is *L. chrysantha* which has bright red fruits, brighter than those of the allied *L. xylosteum* and *L. Morrowii*. Much less conspicuous are the bluish black fruits of *L. oricalis*.

Alfred Rehder.

## NEWS OF THE CLUBS AND SOCIETIES.

### SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

#### The Trade Exhibit.

Instructions for shipping freight for the exhibition.

The following arrangements for shipping freight to the Niagara Falls trade exhibition of the S. A. F. & O. H. convention have been made:

The Merchants' Dispatch freight agency, whose representative will call on you, will wherever possible receive freight and send it collectively to the Falls.

This office will supply you with shipping tags, which kindly use, filling in your own name after the word "From."

If shipping by freight and you wish your exhibit to be carted to the hall, fill out the line on the tag:

In care of: The Anderson Carting Company.

This company will carry all freight from cars to exhibition rooms for 15c. per cwt., C. O. D.

If you wish to avail yourself of the Anderson Co. services, kindly mail freight bill to said company.

Address: H. W. Anderson, 320 1st street, Niagara Falls, N. Y.

If shipping by express, use tag without filling above line.

All freight and express charges must be prepaid to avoid confusion.

Paragraph 7 of rules relating to the management of the annual Trade Exhibition reads as follows:

"Exhibition space shall be designated in square feet. The charges for space shall be as follows:

Minimum charge, \$5.00.

Fifty ft. or less, per sq. ft., 26c.

Excess over 50 and not over 100 feet, per sq. ft., 19c.

Excess over 100 ft., per sq. ft., 18c.

This shall be interpreted:

1. The smallest amount of space sold is \$5.00.

2. The first 50 sq. ft. or less of any order shall cost 26c. per sq. ft.

3. Additional to the first 50 ft., 19c. per sq. ft.

4. Additional to the first 100 ft., 18c. per sq. ft.

For example: 150 sq. ft. will cost \$51.50.

Unless otherwise instructed, all benches and tables will be neatly covered with dark green cambric free of extra charge. There will also be a sign painter and card writer on hand who will do any work on the above lines that exhibitors may wish, for a nominal charge.

Yours truly,

CHAS. H. KEITSCH,

Superintendent.

#### Special Bowling Trophies.

Chairman George W. McClure of the Sports Committee of the S. A. F. asks us to announce that he will be glad to receive voluntary contributions of special prizes to be awarded in the bowling and other sporting contests,

but particularly for the bowling contests, in connection with the coming convention. The time is now very limited, and a prompt and generous response will be appreciated.

#### New York to Niagara Falls.

At a recent meeting of the New York Florists' Club it was unanimously decided to accept the offer of the Lackawanna Railroad account of the above meeting.

We will have a special train leaving New York Monday, Aug. 17, to run through from New York to Niagara Falls direct, leaving New York at 10 A. M. from the foot of Barclay, Christopher or West Twenty-third streets, due to arrive in Niagara Falls at 9 P. M. Connection with this train can also be made via the Hudson River Tunnel. This train will be equipped with combination baggage and smoking car, the necessary number of high-class vestibule standard day coaches and dining-car. Noonday meal will be served on the la carte plan and for the evening meal, we will be served with an elaborate table d'hôte dinner at a cost of \$1.00 per capita.

Tickets will be on sale on the certificate plan at one fare and three-fifths for the round trip (\$12.80). Purchasers can apply at any Lackawanna ticket office; agent will furnish certificate, collecting \$8.00 at the time of purchase for the going trip. This certificate will be honored on the return trip for a ticket from Niagara Falls to New York at a cost of \$4.80; in other words, the total round trip will cost \$12.80. Lackawanna ticket offices in New York city are located at Broadway and Wall street, 429, 1183, 1434 Broadway; 251 West 125th; Barclay, Christopher or West Twenty-third street ferries; 339 Fulton and 954 Broadway, Brooklyn, N. Y.

For the accommodation of florists and their friends who live on the Morris & Essex Division of the Lackawanna Railroad a stop will be made at Dover, N. J., at 10.55 A. M. enroute to Niagara Falls.

On the trip from New York to Niagara Falls over the famous Lackawanna you will pass the beautiful Delaware Water Gap, the dividing line between the states of New Jersey and Pennsylvania; the magnificent Pocono Mountains, thence through the coal regions of Pennsylvania and the gorgeous Genesee Valley into Buffalo.

We extend a cordial invitation to all to join us on the special train.

Very respectfully,

PATRICK O'MARA,

Chairman Transportation Committee.  
JOHN YOUNG, Secretary.

51 W. 28th St., New York City.

#### Boston to Niagara Falls.

It is earnestly hoped that a goodly number of members of the Boston Gardeners' and Florists' Club will attend the annual convention of the S. A. F. at Niagara Falls, August 18th. If all who intend to go would make up

their minds early, so that concerted action could be taken, the economy and comfort of the trip would be greatly facilitated. This, of course, includes any who desire to attend the convention, whether members of the club or not. The only reduced rates available are on the one and three-fifths certificate basis, making the round trip from Boston \$15.92 on the N. Y. Central or \$15.12 on the Fitchburg line. This is exclusive of sleepers.

There is no doubt in the writer's mind that the S. A. F. is destined to evolve into a national horticultural society on a very broad basis, and that the Gardeners' and Florists' Clubs of the country will be the natural feeders and correspondents of that society. If that is the desirable objective, private gardeners as well as all florists and all other lovers of horticulture should attend the meetings, and seek to direct the policies of the S. A. F. into the desired channels.

The writer will be glad to assist in bringing together those who propose to attend the convention, and will promptly give any information obtainable. Only don't put it off till the last minute.

F. E. PALMER, State Vice-Pres.  
Brookline, Mass.

#### Florists' Club of Philadelphia.

At the meeting on Tuesday, Aug. 4, after a lively debate it was decided that the Philadelphia delegation go to Niagara Falls by way of the Pennsylvania R. R. via Harrisburg and the Northern Central. Train leaves Broad Street station 8.25 A. M., Monday, August 17th, arriving Niagara Falls 9.10 P. M. same day. The Philadelphia party from present indications will be about seventy-five strong and they expect to be joined at Harrisburg by the Baltimore and Washington contingents. The rate is fare and three-fifths, totaling \$14.85 for the round trip. Pay the regular one way fare at start and get certificate from ticket agent. A cordial invitation is extended to all wishing to join the party whether members of the local or national bodies or otherwise.

I. Rosnosky read an interesting paper on *Lilium Formosum*. Robert Craig strongly urged the members to stop off at Cornell on way back. He read a cordial letter of invitation from Mr. Larzalere of the University.

#### Office in Washington.

It appears that under the charter the society should maintain a permanent office in the city of Washington, D. C. President Traendly has appointed Mr. Wm. F. Gude as the official representative of the Society of American Florists and Ornamental Horticulturists in that city who will maintain an office at 1214 F street, N. W., Washington, D. C.

W. N. RUDD, Sec'y.  
July 28, 1908.

### GARDENERS' AND FLORISTS' CLUB OF BOSTON.

To accommodate several members the date of the Amherst field day has been changed from Aug. 14 to Aug. 15. All intending to make the trip are invited to meet on the platform of the North Union Station, at 8 o'clock, in season for the early Amherst train. All those who hope to make the journey should notify the secretary at once so that he can complete all necessary arrangements.

The attention of club members is called to the coming convention of the Society of American Florists at Niagara Falls, opening on Aug. 18. It is hoped that the club will be well represented. Mr. F. E. Palmer, state vice-president, will cheerfully present information as to rates to any who may wish to make the journey. A big delegation under the auspices of our club will cheer our state officers. Mr. Palmer will be at the club meeting on Aug. 8 ready to furnish any information needed.

### Important Notice—Special Club Meeting.

We, the undersigned members of the Gardeners' and Florists' Club of Boston, desiring to extend the moral support and sympathy of the club to our fellow member, ex-President James H. Morton, in his time of trial, hereby request the president and secretary of the club to call a special meeting at the earliest possible date for this purpose.

James Benzie, James F. M. Farquhar, John K. M. L. Farquhar, John P. A. Guerineau, Peter M. Miller, Alfred Poetsch, Stephen Donnellan, John Van Leeuwen, Duncan Finlayson, William C. Rust, Robert Cameron, Wm. J. Stewart.

Pursuant to the foregoing request a special meeting of the Gardeners' and Florists' Club of Boston, is called for Saturday evening, Aug. 8, 1908, at 8 o'clock, at Horticultural Hall, Boston, to take action on the above. A large attendance of members is earnestly requested. Let us show our worthy and esteemed ex-president that he has the full support of our club in his hour of need.

W. N. CRAIG, Secretary.

### WINNIPEG FLORISTS' ASSOCIATION.

At the Winnipeg Exhibition, which closed on July 19th, there were many splendid exhibits, and it was altogether successful in every way. The Rosery Florist of Portage Rochue had a very pretty and artistic booth, and showed some fine designs and bouquets. Mr. Ormiston of Fort Rouge also had a splendid collection of plants and designs, amongst which the huge fuchsias, begonias, geraniums and ferns—including the Whitmanii, Tarrytown and Boston—were a special feature. The Winnipeg Parks Board also had a big stand of palms, rubber plants, geraniums and fuchsias the

whole forming a pretty picture of cool green and brilliant coloring.

The Winnipeg Florists' Association have combined with the Western Horticultural Society to have a big floral show in September, and all concerned are working hard to make it a success.

The members of the Winnipeg Florists' Association were entertained by Mr. Champion at the new Association Park on Thursday, July 23rd, and a very enjoyable time was spent. Mr. Champion has certainly done wonders in the short time since the park, which comprises nearly 30 acres, was opened, and he hopes by this time next year to have it all set out and finished.

### BUFFALO FLORISTS' CLUB OUTING.

The annual outing of the Buffalo Florists' Club, which was held at Bedell House (Grand Island), was a most decided success. The day was an ideal one. The attractions which the grounds possessed for amusement for those who were not interested in the sports served to make the occasion enjoyable for all. The ball game, East Side vs. West Side, was won by the latter and was an excellent game.

Others events and winners were as follows: Men's race, first, Tob Shank, of Williamsville; second, J. Prisach, of Corfu. One hundred-yard dash, first, Longley, of Palmer's; second, Walthers, of Palmer's. Boys' race, first, R. Klokow; second, M. Harop. Three-legged race, first, Reechert and Walthers; second, Reechert and Sangster. Leap-frog race, first, D. Scott and O. Scott; second, Reechert Brothers. Tug of war, won by the Kasting team. Relay races, won by the Palmer team. Consolation races, Spiedel, Walker, Brown, Ehmann, Stentz, in order named.

Refreshments were served on the grounds. The dinner hour found 128 seated and hungry. At the head of the table W. F. Kasting was master of ceremonies. There were a few remarks by Chas. Sandeford, the club's president, Chas. Keitsch, manager of the S. A. F. Exhibition, and several others. At the close the prizes were distributed to the lucky winners and the day's sport was ended with dancing in the grand hall. Following dinner a bowling match of two sides was won by McClure, 264; Spiedel, 262; Slattery, 261; Sangster, 260; Sandeford, 259. Special request was made by the losing side not to publish their score and as they are friends of ours we comply.

The Nassau County Horticultural Society (N. Y.) has recently received a request from President Roosevelt to become an honorary member.

OMAHA FLORISTS' CLUB OUTING.

## ADVERTISING—AS APPLIED TO THE HORTICULTURAL TRADE.

(An address by Robert Pye before the Florists' Club of Philadelphia, April 7th, 1908.)

Philadelphia is the home of one of the largest, if not the largest, advertising agency of the world. Some twenty-five years ago one of the leading men of that firm, easily one of the most prominent advertising men in the country today, used to say after laying out an advertising campaign with one of their clients: "Well, now, as to results you know and I know that neither one of us knows anything about it."

But in spite of the chances they were taking as to the outcome Mr. McKinney and the man with whom he was working continued year after year to turn over to the printer and publisher in hard, cold cash approximately three times the amount of the net profits of the preceding year of that particular firm, and gradually and steadily built up a business reputation and confidence in the name of that firm which is now known in every flower-growing country on earth. It is the printing press and the post office that have made such conquest possible.

For our purpose tonight advertising may be said to be "applied salesmanship" with the possibility of sales multiplied to the "Nth" power but the printed sheet is by no means the only medium. Hence with his 37 varieties built a big pier at Atlantic City and I have no doubt as an advertising move it pays him well. P. T. Barnum, during the height of his fame as a circus manager upon coming to one of the largest cities, is said to have rented a small plot of ground adjoining the tracks of a leading railroad which carried thousands of passengers every day to and from the city. He set an elephant to work ploughing that field with a man from Ceylon as a driver. You can readily imagine the interest that such a spectacle would create. People talk and papers print the novel thing that interests them. The amount of free publicity that Mr. Barnum obtained would be difficult to estimate.

Looking at it broadly, advertising is publicity—telling other people something about which you want them to know, influencing them to think of you and to desire the thing you have to sell, whether it be pickles or seats at the circus, professional services or Easter lilies. But, tonight, of course, we are most interested in horticultural and horticultural advertising.

### Flowers, Trees, Seeds, Bulbs,

are the things we have to sell and right here comes a distinction—at least I would like to make the following per-

haps arbitrary distinction—for the mere convenient handling of my subject. Some of us are growers, some are commission men, and some cater to the general public and naturally we have a different selling proposition in each case. To the former the trade papers are the mediums of vital interest (more about them later). The rest of us including, we'll say, the seedsmen, nurserymen and general catalog men have learned that we must depend upon advertising for our bread and butter.

Because of the very nature of the case the advertising carried on by these men is perhaps as broad and general as that done by any class of men in the plant business. Perhaps, therefore, it would be worth our while to go into the office of one of these firms and watch them laying plans for next season's campaign.

The conditions which the advertising man has to face are these: As buyers he has all sorts and conditions of men and women—they are located all over the country—and the product which he has to sell includes all kinds of plants, trees, etc., used to beautify the surroundings of the average American home. I use the word "average" as excluding that class of homes which look to the landscape architect for their advice. The average American, we believe, depends upon the florist catalog in the main and upon the magazines treating of this subject to give him the information necessary for the decorating of his grounds.

### The Catalog.

The first and indispensable thing for a salesman to consider is his catalog, or primarily a list of the things he has for sale with the prices thereof. But the successful catalog man knows that bare lists and prices will of themselves bring very little business, and therefore, he devotes time and earnest effort and spares no expense to arrange, amplify and beautify his catalog. He will take care to have the plants properly classified, to have them carefully and accurately described, and also to include if possible directions for their culture, until it becomes a veritable encyclopedia of the things listed. He also engages the services of the best artists, will have his own photographic department or go where he can to get illustrations that will speak louder than words and make his catalog vie with the modern magazine in rare attractiveness. In making up a catalog we think it is always well to bear in mind the attitude of the men or the women who will read it. Amateurs as a rule want to know and are glad to be shown, and there are some women who will read a catalog from cover to cover, no matter how long the descriptions; but the general tendency and a good one is to cut down these

long descriptions and to insert in a clear, readable, well arranged manner only such things as would stand the test of actual usefulness and give an accurate picture to the prospective purchasers of what he is asked to buy. There are many other details that might be treated of, for which there is not room here, as regards the size of the catalog page, the number and kind of illustrations, special offers, bargains, etc.

### The English Excel.

Before leaving the subject we would like to call attention to the fact that the English florist of today is ahead of his American brother as evidenced by the splendid specimens of catalog making which they furnish patrons, not only as regards fine paper and beautiful illustrations, but the comprehensive text-book-like treatment of the subjects listed makes them delightfully entertaining in every way and, if the high prices which they seem able to get is any criterion, we believe they must be good pieces of advertising.

We have here a sample of one of the English catalogs, nearly 400 pages, heavy plate paper, exquisitely executed color work, weight 2-2 lbs. in the mails. They must cost more than \$1.00 apiece. The catalogs issued in our country average in price from 1 cent to 35 cents in the mail bag. There are a great many houses publishing about one hundred thousand books; very few approach the million per year edition. The number needed depends, of course, upon the number of regular customers (as we call those who order intermittently year after year) plus the number of new names that may be obtained in one way or another, so that right here comes the next point for the advertising man to consider in laying out his campaign. How many new names will he get?

The answer which almost immediately follows is, how much money have you got to spend? This question is more easily answered when some plan of operation has been arrived at. How shall we go about it to get new customers, a problem more fascinating than a game of chess, most uncertain as regards the outcome but proving to bring rich rewards. How shall we reach the general public? To a man with a small place doing a local business that problem would be a comparatively simple one. He would probably put up a sign, make his place look as attractive as possible, using the local papers and sending out to his list of customers attractive bits of advertising literature at proper intervals. Of course, this is but a mere outline of what he might do. But our general catalog man is catering to a very scattered public with wonderfully diversified interests, living under multifarious conditions of climate and environment; he must catch their eye and gain their attention long enough to impress them.

### Selecting Advertising Mediums.

One of the first things to consider, therefore, is what mediums shall he use, and the second thing is what kind of a proposition will he circulate through these mediums. It is very much like sowing seed; good seed in poor ground is not much better than poor seed in good ground; both must be good to form a successful combina-

tion. Let us, therefore, first consider the soil, or mediums.

Judging from the way he spends his advertising appropriation the average seed and plant advertiser has in the past plainly found it most profitable to use the magazines and some other periodicals, giving little attention to either billboard, street car or other such forms of advertising. First in the list are the papers which hold for him somewhat the same place as the trade papers do for the wholesaler and the commission man. I refer to the garden magazines with which you are all familiar. The Garden Magazine, Suburban Life and Floral Life are all good; Country Life in America is a unique proposition. Next after this class we would name the women's publications, McCall's Magazine for example, Good Housekeeping, and many others in a like class which seem to appeal as particularly helpful to the women who "do things." Of course there is a long list, important among which are the farm publications, with the Farm Journal a good leader, some of which will "win out" on certain propositions and "fall down" on others and this leads us to another very important matter, that of

#### Tracing Results from Advertising.

We understand that Burpee depends upon a certain proportion of the people answering his advertisements stating in what periodical they saw the advertisement, and in that way learns which ones pay best.

Where possible we believe it pays to keep every advertisement and check the returns. We have here a schedule showing the number of orders received and the cost per order and cost per reply to a certain list of papers from a certain proposition for a certain period of years, and you can readily understand how helpful is this schedule in selecting mediums for future advertising.

#### Space.

The next question will be, How much space shall we use? Does it pay to use a large space in a few mediums or a small space in a great many? Will it pay better to spend \$4000.00 for putting an advertisement on the back cover of the Ladies' Home Journal for example or to use the same amount of money in buying full page space in four of the leading monthly magazines? Of course, there are extreme cases, but the same principle applies, and it is no easy matter to decide questions of this kind. We believe it pays to take sufficient space to very certainly catch the attention of the woman who is not likely to be interested, and to take that space in the magazines of good standing and large known circulation, and which you know reach the class of people for whom you are making a bid.

#### Copy.

The question of copy is perhaps the most fascinating of all. We know of no easier way to waste money than to buy space and to fill it but poorly. The first question to consider may be, Will you advertise directly for orders or advertise for names?—or in other words get people to send for your catalogue which can be depended upon to make the sales. Look through the advertising pages of any current magazine and we will find samples of every type.

Tompkin, for example, offers a beautiful lace fern, first, tacking on the proposition that four cents must be sent to pay cost of packing and postage; that four cents is a good foil to keep off mere curiosity seekers. It appeals to the people who want much for little but the advertisement is well framed and also ought to appeal to the very best names. An advertisement of this kind will undoubtedly get circulation for the catalog.

Another type that you are sure to note is that of making a definite offer of a collection or a novelty. There is some risk as to whether or not such offers will pull and this is the test for the man who writes the advertisement. Personally we have tried the free offer plan, and have secured thousands of names that have cost not more than a penny apiece; we have tried the second plan above referred to and have got some orders to cost us not less than \$4.00 apiece, but after we had sent on each particular proposition, counted up the cost of the catalogs and considered the returns from all the sales made there was very little difference in the net result. Countless examples of this kind might be related but all go to show that it is as important to consider the quality of the names thus secured as it is the cost to get them. Cyrus Curtis, head of the Ladies' Home Journal Company, once said that if he got back one quarter of what he put into his advertisements he considered it was paying him very well indeed, and it took six figures to show the amount he was then expending each year.

#### Catchy Schemes.

There are a few things that may be worth mentioning in connection with display in advertising. Some artists or some advertisers seem to have the knack of getting up an advertisement that will stand out strongly on the page. Some years back white on black advertisements were very much in evidence and are still distinctive. You will remember the excellent advertising done by the Greenhouse Construction Companies in the trade papers; what splendid taste is displayed, attractive illustration, strong borders, white space and well selected and well arranged type, and best of all, good, straight-from-the-shoulder talk. There is a characteristic style in the clean appearance of Burpee's advertising, from which for the most part illustrations are eliminated, except in the way of their trade-mark or their green label. When the term "Uneeda Biscuit" was coined for the National Biscuit Company, there was also adopted a particular style of letter, and from that day to this, whether on bill-board, box or magazine, we think we are right in saying that that particular style of lettering has always been retained.

Advertisers have learned the value of repetition. "Water dropping day by day wears the hardest rock away." Repeated taps of the hammer will finally break the stone. There is a little "ad" that appears in the trade papers most pleasingly distinctive, and I daresay there is hardly a man in this room who is not perfectly familiar with the little label pictured in the firm name of the Leedle Floral Company. It is impossible for one to think of the advertisement of

that firm without picturing in his mind the little label, which is sold so readily on the most crowded page. A good trade mark can be hammered into the consciousness of the people you are trying to reach. With it, if it be strong enough, you can count upon gaining the attention of every passer-by every time he comes along, and very much oftener, and very much more surely, than if your "ad" was dressed up in the common garb of ordinary type.

#### Testimonials.

Testimonials, it seems to us, are worthy of mention, as being strong arguments in advertising. They are recovering from the violence done them by the patent-medicine man. In the first place they come from disinterested, at least unprejudiced persons and, in connection with catalog work especially, if not with advertisements, they add conviction as to the pulling power of the thing advertised.

#### Free Reading Notices.

Many of you probably remember how at a large reception given to President Roosevelt, in course of the naval review in New York harbor, there was a certain flower that figured conspicuously in the decorations. Just how much John Lewis Childs is responsible for the Gladiolus America being used for the President's reception we know not, but it is very certain that the amount of free publicity gained through the press, as the result of this gladiolus being used, would have cost Mr. Childs many thousands of dollars if paid for at regular advertising rates.

Any one who has been reading the trade papers for the past few months has surely had impressed upon his mind the fact that there was a new hydrangea on the market. Because of the discussion over a name that hydrangea has been advertised so widely that it is almost as famous as old H. panic, grandiflora, yet our genial friend from Indiana, the famous introducer, we suppose has not been charged a cent.

Some people are trying to believe that they are reducing the profession of advertising to a science. They claim certain conditions produce certain results, just as life insurance men have their mortality tables. The most successful advertisers, or the man entrusted with the expenditure of the largest sums of money, still advise, and widely practice what they preach, as follows:

"Try out every scheme (no matter how promising it may appear on its face) thoroughly on a small scale. First tabulate results, carefully watch results and your correspondence, then shape your course accordingly.

Just one more thought I wish to leave with you. When you advertise, be ready to "deliver the goods." Do not disappoint, or your advertising campaign might just as well have been. Good stock, right prices, with prompt, courteous attention to customers will win trade and create a confidence that will be hard to shake. This is by no means the least important.

Again we repeat hold your customers by good service, because after all a satisfied customer is your best advertisement.

## FORMOSA LILIES.

A Paper Read Before the Florists' Club of Philadelphia by  
I. Rosnosky.

The Formosa lily was discovered about three years ago by Mr. Uhei Suzuki, of Yokohama, Japan. Mr. Suzuki, after repeated efforts to bring a lily on the market that could compete in earliness with the Bermuda Harrisii, discovered on the island of Formosa, a wild-growing lily of Longiflorum type. The bulbs were collected and cultivated exactly as they are on the mainland. The cultivation proved highly successful, and three years ago six cases in miscellaneous sizes of the Formosa lily were shipped for the purpose of experimenting in the States.

The experiment proved a success, and as the following year a further consignment of sixty cases resulted equally well, the Yokohama house was instructed to plant as many Formosa lilies as possible.

The Formosa lily flowers in the month of February in its native island, which is about two months earlier than the Harrisii in Bermuda. By the end of May the bulbs are ready for shipment and ought to reach here in August. Repeated experiments have proved the Formosa lily to be strictly free from disease and the bulbs are good for both pot, plant and cut flowers.

There are about six different kinds of Formosa lilies, but the flowers are almost identical and bloom at the same time. The flower opens up a fine, pure, waxy white, and keeps splendidly. Average size of plant is 30 in. to 40 in. high, with leaves from the root up. The plant produces three to eight flowers to a plant, according to size of bulbs. The plants stand very erect and their stalks are firm and hard.

I wish to call special attention to the fact that if the Formosa lilies are not forced too much they will all turn out the same height. If forced very early they will grow rather tall, and may not produce flowers as large as they should if grown in 50 to 55 degrees temperature. If the lilies are wanted for Easter the bulbs should be potted in November and kept cool. This long rest from the time of their arrival until they can be potted is very beneficial.

An interesting result was achieved by the Hinode Florist Co., of White-stone, N. Y., with this year's lot of Multiflorum lilies. They did not pot the bulbs until a week after Christmas and much to everyone's surprise the plants were ready for the Easter market in perfect condition. Furthermore, the Hinode Florist Co. only had to throw out 10 per cent. of their Multiflorum lilies. They kept their lilies in a temperature of from 50 to 55 degrees, at night sometimes 60 degrees.

I wish to emphasize the fact that a great many lilies are killed by over-watering, for even the strongest and healthiest plants can be killed that way. The roots get soaked until they are brown, and the plant dies. During cold weather the water should be warmed up to avoid chilling the plants.

For the benefit of the Philadelphia florists, I wish to say that E. Lieker, at Lansdowne, Pa., gave the Formosa

a thorough trial of 1500 bulbs. He was exceptionally well pleased with the results last Easter. I also saw a very fine lot of Formosas at A. Graham & Sons', Cleveland, Ohio, A. N. Pierson's, Cromwell, Conn., and several other places. I am also informed that Messrs. Bassett & Washburn of Chicago had especially good results with Formosas last Easter. This firm grows a very large quantity.

## ROSE HYBRIDISATION.

(A paper by Alex. Dickson, Newtownards, Ireland. Read before the American Rose Society.)

It was with considerable hesitation that I consented, at the request of your Society, to write a paper upon hybridisation and cross-pollination in relation to the rose. I may say at once, it is a request I have refused many times from similar organizations here and elsewhere, because I have always felt, and indeed still feel, it is a subject upon which it is extremely difficult to write a satisfactory paper. The subject is one which cannot possibly be dealt with satisfactorily in a paper such as the present, and the chief difficulty one has is selecting the lines upon which to write, or the point of view from which to discuss it. I will do my best to make the paper as interesting and instructive as I can within the limited scope at my disposal. I have given the subject my most careful consideration, and I am convinced that the best method of dealing with the subject in this paper is to give you in a condensed form some of the results, which have accrued from the labors of my brother and myself, extending over a period of almost thirty years.

## The Commercial Standpoint.

I would ask those who hear this paper read, and those who may read it for themselves, to remember, that it is written by a professional rose grower, and, therefore, by one to whom the practical results, from a commercial standpoint, were of the most vital importance, and of necessity this point of view had always to be borne in mind by my brother and myself in our line of experimental inquiry; and it is from this point of view that I deal with it. Hybridisation is a subject of intense interest, and the practical application of the science opens up an indefinite and even inexhaustible field of inquiry, but those of us who are professionally engaged upon this branch of horticulture must abandon to some extent at least, the scientific aspect, in favor of the practical. With the stern realities of life facing me, I have many times—contrary to my desire—been compelled to abandon scientific lines of inquiry, as against the production of new varieties of commercial value—a situation I regretted, but could not help. After thirty years steady and continuous work, I am inclined to the opinion that the further one pursues the subject of hybridisation, the greater the field for exploration. I have often thought, whilst pursuing my work, and watching the results, that the effect was much like that produced when climbing up a steep mountain—the further one rises, the more the plains below are opened up. I will try

to explain more fully as I go on exactly what I mean, and the foregoing observations are made with a view to render less keen the disappointment which I feel will inevitably follow the reading of this paper. I am conscious that my observations will be read before, and by, men of practical experience in horticulture, and particularly in the culture or advancement of the rose, and by men keen upon the development and improvement of the rose; and I am sorry for this reason, that I can give little practical assistance to any who are desirous of entering the field of hybridisation on their own account. I may, however, render their disappointment less acute. The main reason why I can render little practical help is, that, when all is said and done, hybridisation is a science of pure experiment, or rather chance, as I can easily show.

## Hybridisation and Experiment.

To do this it is only necessary for me to assume that everyone—at least everyone interested in horticulture—knows that, so far as seed bearing plants are concerned, they will reproduce their species in some shape or form—may be with some variation, or may be exactly similar. And it follows that, by the fertilization of different varieties of the same species, new varieties, or at least varieties with some distinctive feature may be produced. It is a different matter, however, to reduce the chaos, which results from indiscriminate cross-fertilization, to something like definite order—a result far beyond my ambition, or the scope of this paper, if indeed it is at all possible. All I can do in this direction, and indeed it is very little, is to give some results of our labors in hybridisation.

We began work in 1879, and naturally our first operations were upon what were considered the finest show varieties of that day. Naturally we chose parents of the choicest colors, having beauty of form, and, as far as possible, vigor of habit. The hope of course was, that the fertilization would re-produce varieties of a different kind, with at least, some of the qualities for which the parents had been selected. The results for many years were disastrous. Keen and bitter disappointment followed our experiments. We, however, persevered, always upon fixed lines, carefully recording our crosses and results, making a careful and close observation of the most important features of the offspring of the cross; and I regret to say that, in the majority of instances, there was nothing but dismal failure to record. I think I can safely say that the most certain result of our crosses in the early stages of our experiments was to convince us of the absolute uncertainty of what our results would be—this prevails even now, though in a lesser degree. Possibly this is one reason why rose-hybridisation is so intensely interesting. There is always and ever the element of uncertainty in it so dear to human nature. One never knows what the fertilization to any two varieties will produce, or more correctly—how many different varieties. One seed pod containing four seeds may—and has to my knowledge—produced four seedlings absolutely distinct in

every conceivable respect. Many and many a time I have seen produced from the seeds sown from one hip, half a dozen seedlings absolutely distinct in color and form, some as single as the ordinary dog rose, and some so full in substance that it was impossible to get them to open even under glass.

#### A New Ideal.

In the early eighties, when we began to see the results of our labors, we abandoned the original basis of our experiments, namely, the fertilization of the better varieties of Hybrid Remontant or Perpetual, and began a series of cross-pollination between the Hybrid Perpetual and Teas and Austrian Briars, and then, using the results of this first cross in a systematic course of in-breeding. The main object which we had in view, was to produce varieties of roses at once vigorous in their habit, continuous in their bloom, at the same time retaining the absolute essentials of all good roses, namely, beauty of color, perfection of form, and delicacy of perfume. It was, of course, a great ambition, and how we have succeeded we must leave the world to judge. Broadly, I would say that such success as has attended our labors, is due far more to the careful selection than to any defined plan of fertilization. As a broad basis of our experiments, we took as parents such varieties as appeared to us to embody the chief elements of our ideal, and worked steadily from these. We had, of course, to experiment upon a very extensive scale, and my point will be readily appreciated when I say, that we were only able to retain for use, either for further fertilization or for commerce, about 5 per cent. of the seedlings raised. To appreciate the labor this entails upon the hybridiser one must follow the rose from the hip until it reaches maturity. In hybridisation, carried out upon a systematic plan such as ours, it means that the plants with which we are working, have to be specially selected, planted and grown, and the blooms fertilized. There is then the period required to ripen the hip, (and in Ireland this takes considerable time, owing to the cold and dampness of our climate). Then comes the sowing of the seed, and the attention and care during the period of germination.

#### Some Uncertainties.

In this respect, it is interesting to note the wide differences in the period of germination in the different cases. In some instances, the seed will germinate in two or three months, and in others I have known it to lie dormant for twelve to fifteen months. (I have never been able to give any reason why this should be so, and particularly why there should be marked differences in the periods of germination in seeds taken from the same hip, yet there is very frequently a marked difference). To continue on the point I am making, it takes anywhere from three to six months according to the vigor of the plant, to bring it to such amount of growth, as will enable us to bud it for the purpose of testing outside. Then, when it is budded of course it takes a full year to bring the plant to maturity. Here again, one has to face uncer-

tainties, and to be very careful about forming a judgment, as experience has proved time and again, that in the early stages of culture some varieties have displayed the greatest shyness in flowering, and yet, after a few years cultivation, have taken their places in the front rank, as perfect garden roses, blooming with the greatest freedom. Each year we are compelled to make a very close selection, and to discard every seedling which does not suggest some improvement in, at least, one or two of the essential elements of the perfect rose, otherwise we would, of course, have been flooded out with varieties, which would have been of no practical value to us, or indeed to the rose world at large.

#### System in Crossing.

The system we ultimately adopted was hybridisation in the first instance between hybrid perpetual and teas, and then inbreeding from their offspring upon the following lines. We made four distinct crosses. We took a seedling of our own, which gave some evidence of possessing at least some of the qualities aimed at, and, in the first instance, this seedling was crossed with the male parent; secondly, the seedling crossed with the female parent; thirdly, the male parent crossed with the seedling; fourthly, the female parent crossed with the seedling. As soon as we were able to form an opinion of the results of this inter-breeding, we again made a selection of those most closely approaching our ideal, again in-breeding, but with this difference, that we only made use of a limited number of parents, but in almost every instance making a double cross. For example, if we made a seedling with, say, Marie Van Houtte as the male parent, then during that season we reversed the cross, making Marie Van Houtte the seed bearing parent, and the seedling the male parent. We always had relays of plants prepared in duplicate for this purpose, and we carefully and methodically registered each experiment, thus carrying on our work in a systematic manner, the system of selection of course always playing the most prominent part in the results. From practical experience we were able to ascertain which varieties, or rather types, gave us the best results, and we were, therefore, able to a considerable extent to lessen the waste, and to reduce our methods to a system containing at least some elements of certainty. We, of course, have made use of varieties of other raisers, where we have been struck by any special feature which they contained, which was in our opinion an advance upon anything in commerce.

#### Some Interesting Results.

The result of our labors has been to produce what is admittedly an absolutely distinct class, if not family, of roses known as the "Alex. Dickson type." We of course claim that the types of roses we have introduced have made a great advance on those previously in commerce. We aimed at producing a type having vigor of growth, freedom and continuity of bloom, the flower full and perfectly formed, with unusually long petals, at the same time, growing on bushes,

the foliage of which is luxurious and handsome. How far the varieties we have sent out have done what we claim for them, you must judge.

In our experiments and in struggling with the qualities we have indicated, we felt convinced that La France would prove one of the most useful parents we could possibly have, if we could succeed in making it produce seed. It was, of course, the opinion of most hybridisers that La France was sterile, and with this opinion we were for a long time inclined to agree, and indeed the best that could be said for it is, that there is just the possibility that it may be fertilized. Out of many hundreds of crosses with this rose, only in one single instance did we succeed in making it produce seed, but we feel that the labor we spent was amply repaid, as the ultimate result of it, was the introduction of Mrs. W. J. Grant, known to you as Belle Siebrecht, in our opinion one of the finest roses in cultivation, at least from the Britishers' standpoint. In addition to this, we have always found from practical experience, the roses descended from this particular cross have always impressed their offspring with some at least of the more prominent qualities of the parents, and it was pursuing this particular line of breeding that enabled us to produce varieties, which, from a British standpoint, are ideal exhibition flowers, and at the same time the plants are floriferous and of excellent constitution. In this group we might mention Kil-larney, Mrs. Edward Mawley, Bessie Brown, Liberty, Lady Moyra Beauclerc, Lady Ashtown, Mrs. David McKee, Dean Hole, Countess of Derby, Betty, Mrs. G. W. Kershaw, and, last but not least, Mildred Grant and William Shean, two of the finest exhibition roses at present in cultivation in Great Britain. Mildred Grant resulted from a seedling between Niphetos and Madame Willermoz in the first instance, crossed with a seedling of our own, which is not in commerce, and the system of which this is an instance applies pretty generally to all the better classes of roses introduced by us.

## The Framingham Nurseries

Offer a large and selected stock of the following varieties of

## EVERGREENS

Abies Balsamea, Concolor, and Fraseri, Junipers of various varieties, Picea Alba, Engelmanni, Excelsa, Pungens-clausa and Pungens-Kosteri, Pinus Astrachana, Excelsa, Mugho, Ponderosa, Resinosa, and Strobus; Pseudo Tsuga Douglasii, Retinosporas, assorted; hardy Taxus, such as Canadensis, Cubensis, and brevifolia, Thuja Occidentalis, Globosa, Peabody's Golden, Pyramidalis, and Siberica; Tsuga Canadensis, Hemlock Spruce, a large and fine lot.

We have some fine specimens of Abies concolor, Picea pungens, and Pinus strobus. Most of the above varieties can be safely planted from the middle of August until the middle of September. A personal selection is always advisable. Boston and Worcester Electricians pass our grounds.

### "BACK TO THE FARM."

There comes up the usual prescription at this time of a tight money market and a more or less cessation of activity in all lines of business. This is the cry of "back to the farm." The first thing everybody seems to think of is, why not turn all the unemployed thousands loose on the farm and let them help out the poor farmer in this period of few farm hands.

But it seems to me that this is an unwise agitation. In the first place, farming is a scientific occupation (not an "art" as some would have us think), requiring knowledge, intelligence, and capability. That many make a living at so-called farming, simply emphasises the broad scope of the business and indicates the possibilities for abusing an industry capable of giving returns under mismanagement and neglect.

For artisans, clerks, and ordinary laborers—the usual classes affected by hard times—to think of farming is laughable, and at the same time pathetic. To put them on a farm would be actual hardship to them as well as to the farmer. Even with their work planned for them, one need bring to mind a picture of a clerk plowing a uniform furrow or a hod carrier pick-

ing red raspberries at anything like average speed, to see how ridiculous the idea is.

But the main point, it seems to me, is that few of these men would turn to the farm for an indefinite time. It would be only during the period of inactivity in their respective lines, and as soon as business picked up they'd be off to the old life once more.

For this reason the farmer will go slow about getting such men at work too quickly. He can be no better off after the men leave, and he may be worse off. The proper handling of stock and land is absolutely essential to maximum results, and it is far better to pay good wages to regular help for the time being, than to rely on such a nondescript supply as a city would send out.

R. L. ADAMS.

### MILDEW.

Mildew is the bane of plant forcers, whether for flowers or fruit. Being a parasite fungus, having as its host the plants of our greenhouses, both commercial and private, its control is one of the vital problems confronting the grower. The problem is rather a peculiar one, since, both being plants, death to the one means death to the other. Mildew yields to the fumes of sulfur, and is more susceptible than the host. Hence the question becomes

one of getting the sulfur fumes into the house when, where and of the strength needed. Three methods have been used, painting sulfur on steam pipes, vaporizing it in one of the various devices, home made or bought, or dusting it on the bushes themselves. Painting the pipes is not satisfactory; the fumes go all through the house, fading or defacing the product; they are in the house for a long time, and are equally distributed in all parts, whether needed or not. Steam must be used to start them; when mildew is rife during the summer, steam is a detriment. The different vaporizers, ignoring the fact that sulfur when heated to the kindling point will burst into flame, have in them a great source of danger, and, being stationary, if they do "go wrong and take fire," much damage is done before they are discovered or can be put out, for burning sulfur is very difficult to extinguish, and people cannot endure the resulting fumes if strong. When dusted on the bushes it becomes necessary to make the fumes effective, to take off all ventilation and raise the temperature greatly. No comment on this is necessary.

Taking all these into consideration, a device has been worked out and patented which, it is claimed, will make mildew and its attendant evils things of the past, and does away with the bad results of successive and prolonged heat and fumigation, in forcing out the buds and fading them. This promising new device will be advertised in the next issue of HORTICULTURE.

# CHRISTMAS-FLOWERING SWEET PEAS

## NOW READY

### Introductions from 1907

**MRS. ALEX. WALLACE.** Lavender. This variety is without doubt the best in a lavender, every florist has been pleased with it, and the flowers keep for nearly one week without losing their fine color.

**MRS. Wm. Sill.** Pleasing salmon pink; very popular with the retail florist, a good seller.

**Mrs. F. J. Dolansky.** Daybreak pink. While not as large as the others the color takes well.

**Le Marquis.** This is the same color as Princess of Wales violet; has very large flowers, and sells well where a dark blue Sweet Pea is wanted.

**XMAS PETEOR.** Scarlet, fine open red flower.

**Jack Hunter.** Light yellow. Sold out.

**Xmas Captain.** Blue and purple. The same as Captain of the Blues.

**Mrs. Chas. H. Totty.** Sky Blue. In best shape for late planting, or when in crop in March and April.

**Miss Josie Reilly.** Lilac. Very large flowers.

**Wm. J. Stewart.** Blue self.

All these varieties produce steadily immense quantities of flowers throughout the Winter, with from two to five flowers on stems up to 25 inches in length, all growing over 7 feet high and, when well grown, reaching the height of 12 feet.

Price, 1 oz., 50c.; 2 oz., 75c.; 1 lb. \$5.00.

**WINTER FLOWERING MIXTURE.** Over 25 colors, mixed, 1 lb. \$2.00.

### Standard Varieties

**XMAS PINK.** The most popular Sweet Pea in existence the past sixteen years.

**FLORENCE DENZER.** Pure white; has been ten years in commerce and improves yearly.

**Mrs. E. Wild.** Carmine or dark pink.

Price on the above three varieties: 1 oz., 30c.; 2 oz., 50c.; 1/4 lb., 75c.; 1 lb., \$2.00.

**WATCHUNG.** Pure white; black-seeded; short grower, seldom exceeds six feet in height and a very good sort when head room is limited. 1 oz., 30c.; 1/4 lb., 75c.

### Novelties for 1908

**NEW CROP READY IN SEPTEMBER.**

**Mrs. W. W. Smalley.** A pleasing satin pink; flowers are very extended, while the stem is not extremely long. Behind every leaf comes a good salable flower with a good color from early in fall until late in Spring. This will be found a very good commercial variety in light pink.

**Mrs. Geo. Lewis.** White-seeded. Pure White. Very large orchid or wavy flower. I think it will outclass Florence Denzer in a few years.

**Greenbrook.** White, standard, slightly touched with lavender. Very large orchid flowering.

**Miss Helen M. Gould.** White, open flower; standard, lilac, marbled.

**Mrs. Hannan.** Deep rose pink of a very pleasing shade, medium flower.

Price, each trial packet containing 100 seeds, 25 cents, 1 oz., \$1.00.

Orders from unknown parties must be paid in cash or by New York draft.

Foreign customers will please send remittance either by International Postal Money Order, or by draft on a New York bank.

All orders are filled strictly in rotation, and mailed as soon as the new crop of seed is ready.

None genuine unless this Trade Mark is stamped on the Packet

If some one tries to sell you so-called Winter Sweet Peas without this Trade Mark, send back his Lemon.

## Seed Trade

Leesley Bros., who have thirty-five acres of onion sets near the Harlem race tracks, Chicago, reports the crop outlook very favorable.

L. W. Bowen, president; H. K. White, vice-president; D. M. Ferry, Jr., treasurer; K. B. White, secretary; A. E. F. White, auditor, constitute the new officers of D. M. Ferry & Co., Detroit, Mich., elected on July 21.

One exception to the generally light crops has been beans, and in many sections they could not be sold for the cost of picking. This means much seed in the hands of the farmers, a fact worthy of note by the retail seedsman.

Harvesting of Alaskas, and other early peas, is now in full swing, and we may soon look for something approaching definite news as to the general crop. That it will be disappointingly short may be taken for granted, but here we must rest for the present.

The acreage in potatoes on Long Island was the largest ever planted, our estimate last spring placing the yield at one million barrels. Such a yield would have meant low prices, but though the yield has been most disappointingly short, prices have been fairly good, and this is about the only balm in Gilead.

Truck farmers are having a hard time of it this season, as not only are crops light, but the quality is generally poor and prices are low. Those seedsmen who have a large clientele among these people are having their own troubles this year. They report collections as very unsatisfactory, as most early crops have brought very light returns and the farmers have little money with which to meet their obligations, and the seedsman must wait.

To add to the troubles of the seed growers, a new plague has appeared, in the shape of a louse or bug, which has attacked the Lima beans in California, and particularly the Burpee's Bush. Just how serious this is going to prove cannot be stated at this time. So far as the trade knows, this is the first year this plague has appeared, at any rate in destructive shape, and all will earnestly hope it is not going to abide with us. We already have troubles enough without the addition of this latest nuisance.

Reports of scorching heat and hot winds came from the West and the improvement noted in sugar, corn and vine seed crops in last week's HORTI-

## GIGANTIC PANSIES

Can only be produced from the Giant Strains. Our CHALLENGE PANSY seed contains only the Giant self colors, the Giant Striped and Variegated and the Giant Blotched, all carefully mixed in proportion. You could not buy better seed if you paid \$100 per Ounce.

### A SWEET PEA COMPETITION.

Thornton Bros. of Lawrence, Mass.,  
inaugurated a very successful sweet  
pea competition among their custom-  
ers by offering last spring a prize of a  
gold watch for the best exhibit of 200  
blooms from a half pound of seed pur-  
chased at their store. The offer re-  
sulted in the sale of two hundred half  
pounds of sweet peas and the exhibi-  
tion on August 1 at which time the  
prize was to be awarded was extensive  
and beautiful. Messrs. J. K. M. L.  
Farquhar, M. A. Patten and W. J.  
Stewart served as judges. The judges  
were entertained by Mr. Thornton at  
his home farm which includes a large  
tract of white pine woods.

#### PERSONAL.

Thomas A. Culp, florist Hannibal, Mo., who has attained a good old age, is critically ill.

Lucien LeClerc has taken charge of the greenhouses of the Western Kentucky Lunatic Asylum at Hopkinsville, Ky.

G. R. Bliss of Corning, Iowa, has been placed at the head of the new horticultural department of Ames State School, Ames, Ia.

Upon invitation of Supt. Theodore Wirth of the Minneapolis Park Board, members of the Minnesota Rose Society visited the rose garden in Lyndale Park on July 22.

Mr. Dysinger, secretary for Holm & Olsen, of St. Paul, Minn., is on his way east to Lockport, N. Y., whence he will go to the S. A. F. convention at Niagara Falls.

Gustav Schneider has resigned his position as manager of the Springfield Floral Co., Springfield, O., and will devote his entire time to his greenhouses on South Centre boulevard and his recent purchase, the Agnew greenhouses, on Johnson avenue.

Visitors in Boston: Hjalmar Hartmann, Copenhagen, Denmark; George F. Struck, New York city; Andrew Wilson, Summit, N. J.; Thos. Waterworth, Panama; F. W. Rice, Rutland, Vt.; R. A. Hannaford, Portsmouth, N. H.; G. W. Pool, Gloversville, N. Y.

#### OBITUARY.

##### John C. W. Greening.

John C. W. Greening, a pioneer nursery man, died at Hillsdale, Mich., on July 21, at the age of 85.

##### Justin A. Goodhue.

Justin A. Goodhue, president of the Utah Nursery Company, Salt Lake City, died suddenly at the Alta club on July 23.

##### John A. McGann.

John A. McGann, who has been connected with the Lischee Nursery at Nashville, Tenn., since 1892, died on July 22, while visiting his son in Alabama. He was 58 years of age.

#### BUSINESS CHANGES.

W. H. Ritter, florist, of Fitchburg, Mass., has leased the greenhouse of G. J. Pethybridge.

Julius Ledig is moving his greenhouses from Seventeenth to Nineteenth street, Des Moines, Ia.

The Bletcher Floral Co. has purchased the retail business of G. E. Tromeey at Cincinnati, O.

Mr. Smith, of Iowa, who has bought the greenhouse of T. Kloss at St. Peter, Minn., will retain J. S. Jacobson as manager.

Mr. L. Schroeder has given up his stand in the Chicago Flower Growers' Market, and Mr. Driskey takes his place, while Mrs. Frank Beu takes Mr. Driskey's stand in addition to her own.

#### COMING EVENTS.

Gypsum, O., State Horticultural Society, Aug. 12.

New York, N. Y., Playgrounds Congress, Sept. 8-12.

Augusta, Ga., State Horticultural Society, Aug. 12, 13.

Niagara Falls, N. Y., Society of American Florists, Aug. 18-22.

Augusta, Ga., Southern Nurserymen's Association, Aug. 19, 20.

Sheboygan Falls, Wis., State Horticultural Society, Aug. 26 and 27.

Niagara Falls, Ont., Canadian Horticultural Association, Aug. 19, 20 and 21.

St. Louis, Mo., American Apple Growers' Congress, Southern Hotel, Aug. 11, 12.

Minneapolis, Minn., American Association of Park Superintendents, Aug. 11, 12 and 13.

New York, N. Y., American Institute of New York, exhibition, Sept. 22, 23 and 24, Berkeley Lyceum Building.

Hartford, Conn., Connecticut Horticultural Society, fall show, Sept. 23; chrysanthemum show, Nov. 3, 4 and 5, Unity Hall.

#### NEWS NOTES.

The Richey Floral Co., of Albion, Ia., have added an office building to their greenhouses.

C. J. McCormack is manager of the new nursery firm recently started in Munroe, Mich.

The stock in the store of Mrs. S. A. Moir, Brockton, Mass., was sold at auction on July 23.

James Swan and Fred Thomas, recently with L. L. May & Co., St. Paul, Minn., have started in business at Hazel Park.

Among other improvements Frank Ochslein of Chicago has laid over 4,000 lineal feet of cement walk through his maze of houses.

It is reported that Napoleon Lemay, a florist of New Bedford, Mass., has recently disappeared after having secured \$500 from his partner, W. Crawford, for one-half the business.

Edward H. H. Stanley, late of Peachland, B. C., and not W. S. Stanley, as stated in our issue of July 18, is starting nurseries at Paynes, B. C., to be known as the Kootonia Nurseries.

The annual meeting of the Florists' Hail Association of America will be held at the Cataract House, Niagara Falls, at 4.30 P. M., on Tuesday, Aug. 18th, 1908.

## FLOWER MARKET REPORTS

**BOSTON** The ebb tide in business seems to have been checked, but the flood tide has not yet set in to any great extent. American Beauty roses are in good supply at present and are selling satisfactorily. Another rose which enjoys favor, and deservedly so, is Pres. Carnot. These are excellent at present and all that come in are sold. Kaiserin is not doing so well; it is neither so popular nor so good in quality. Of other roses a good many buds from plants set out in June are coming in; although small and short stemmed they are of good color and carry good clean foliage. The first of the out-door carnation crop has made its appearance; stems are very short, but blooms are fine. The supply of lily of the valley is good, but prices are not as high as in other years. Asters are increasing in quantity every day; they are of excellent grade, but prices are going down. Sweet peas are of good quality and abundant. Gladioli are more in evidence; the variety Shakespeare takes the lead and is really better than the price it brings.

**BUFFALO** The market has been very much on the quiet side for the past week or so, but trade has been equal to that of a year ago. Floral work is about the only thing that has carried any demand for stock. A few asters, roses, bunch asparagus and a design is about the way orders are being filled. Beauties are rather scarce and have had a fair demand, while the prices have advanced a notch. Other roses are in good supply, and the select stock find ready buyers. The same may be said of asters and gladioli, the latter coming mostly in mixed colors. There is an over supply on greens, which has had little demand.

**CHICAGO** Chicago cut flower market is feeling the effect of the heat and continued drouth. Carnations are getting smaller each day and in general stock is poor but some really good Lawsons are seen. The red carnation Robt. Craig is also holding up well for August. Beauties and Kaiserins are coming into the market in good shape. Most of the asters are suffering from the long dry spell and sales are based on quality. Several of the market florists have closed their stalls till business opens up again. Notwithstanding all this there is a steady demand for a few good flowers and on the whole business is as good as could be expected in August.

**DETROIT** Reports are that asters arrive a little better in quality and quantity, but growers complain bitterly about the aster disease. The late varieties look quite well, but the early varieties are a failure.

**NEW YORK** Summer conditions are still in control but there is a slight indication of improvement in the local

call for the higher grades of flowers. Prices have not changed materially on any line. Orchids, especially cattleyas, and the better specimens of American Beauty have something like a regular sale, but most other subjects have to take what the situation affords at the moment and under such conditions it is very difficult to maintain a fixed value on anything. Many flowers are showing the effects of the recent sweltering weather, and roses, carnations, lily of the valley, etc., run under average quality for this season of the year. Asters are already too plentiful and must be extra good to command quoted figures.

**PHILADELPHIA** Conditions the past week remained about as previously reported. There are a few better asters coming in, but the general run are rather poor and prices have broken badly. The local sweet pea crop is all burned up by the hot weather, but some good northern grown flowers are coming in. American Beauty roses are good sellers and good quality. Kaiserins are also good and fairly plentiful, but are not moving quite so brisk as last week. Other roses are away below par in quality. There is nothing noteworthy to report in other flowers.

### News of Clubs and Societies

(Continued from page 165)

#### FLORISTS' CLUB OF WASHINGTON.

On the afternoon of July 23 the Florists' Club of Washington had its annual outing at Great Falls. Local florists all closed their places of business and there were three car loads of happy excursionists. President F. H. Kramer, Geo. Shaffer and Chas. McCauley were committee on arrangements and they managed to give everybody a glorious good time, including a fine dinner and a series of games followed by dancing, despite a series of thunderstorms which continued until the return to the city at midnight. We quote from a local paper, the reporter for which must be a gem, as follows:

Despite the storm the florists had one of the times of their lives. They sharply refused to be outdone by the elements, and, during the afternoon, between showers, the athletic events went on. Truly, a few of the gladiators fell down and left imprints of portly forms in the mud, but who couldn't for the chance to win a bet or a new pair of suspenders?

There was a blare of trumpets at 6, and the aggregation surrounded long tables and did things to a bunch of defenseless edibles spread thereon. After this came dancing, whenever the electrical storm would permit the lights to burn and the music to be heard.

Pres. Kramer, George Shaffer and Charles McCauley, committee on arrangements, were everywhere, it seemed, at the same time. Posing for a photograph on winning the first water from once glorious suits, the same grace was noted. William F. Gage and George Cooke also gave valuable advice to would be athletes.

Jack Minder was declared the winner of the sack race, dead easy, until it was found that his sack had holes in the bottom, and that he had loped in unobserved. Mr. Minder consented laughingly to become disqualified, and posed as an also ran. One of the features was the ladies' fifty yard race, the finals being run by Miss Eva Cook and Mrs. Ed. McCauley. Miss Cook succeeded in going ten yards on the second trial, and fell.

The athletic events opened with a five-round boxing contest between Master Dunn, of Michigan, and Donald Shier, of Washington, both ten-year olds, who fought like grown-ups, and furnished much excitement. Master Dunn was winner, and carried the honors jauntily all the afternoon. Later he did a number of acrobatic stunts amid the applause of the assembled florists.

#### MISSOURI STATE BOARD OF HORTICULTURE.

##### Greeting to sister organizations and horticultural workers:

The State Horticultural Society of Missouri has had an honored career of half a century, holding two regular meetings each year during that time. In 1907, however, it became necessary to reorganize in order to be eligible to receive state aid and the new organization was called the Missouri State Board of Horticulture. The new board will continue to hold two meetings a year—one during the summer at different places in the state and the other in the winter at Columbia.

The board desires to announce that W. L. Howard, of the Horticultural Department of the University of Missouri, has been elected secretary and the headquarters established at Columbia, the seat of the State University, the Agricultural College, and the Experiment Station. Please note change of address.

Respectfully,

The Missouri State Board  
of Horticulture.

#### THE INSECT INVASION.

Spraying is now an indispensable precaution if immunity from destructive insects and fungous troubles is sought. Fall spraying is now in order for certain pests. The elm-leaf beetle, for instance, will make a second brood this season in the Boston district and the damage already done by this destructive insect will be greatly increased unless spraying is promptly done. On page 165 of this issue will be found several insecticide offers. Write to those firms for information as to what their preparations will accomplish.

The State Board of Agriculture of New Hampshire held a field meeting at Hampton on July 29.

#### Bostrom Improved Builders' Levels and Farm Levels

For Park, Cemetery and Landscape Gardening use, take the place of expensive Engineering Instruments. Simple in construction, easily adjusted, more substantial and less cumbersome than the more elaborate and complicated instruments. Practical, up-to-date instrument that any one can use. Write for descriptive circulars and be convinced that this Level is necessary to complete your outfit. Builders' Level \$25.00. Farm Level \$15.00.

around wood bars.

Iron and wood frame greenhouses of  
every type—material only or erected.

LET US ESTIMATE.

### NEWS NOTES.

Work on the plant of the Cleveland Iron Company, Marquette, Mich., is advancing rapidly. The additional ground area for planting will be 12,000 square feet. It is probable that the old houses will be torn down eventually.

The trustees of Massachusetts Agricultural College, Amherst, Mass., have awarded the contract for the new building for the horticultural department to Allen Bros., whose price was \$15,515. The contract for the greenhouse was given to Lord & Burnham Co. for \$13,985.

We are able to quote a low price on the majority of the electros of the illustrations in HORTICULTURE.

### Florists' Hall Association of America

The annual meeting of the Florists' Hall Association of America will be held at the Cataract House, Niagara Falls, at 4:30 P.M. on Tuesday, August 18, 1908.

PATENT APPLIED FOR

### Why My New Curved Iceless Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars incased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: Result, the driest roof ever used for greenhouse purposes.
- 4th. **THE MOST IMPORTANT OF THEM ALL.** The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

**William H. Lutton,** Horticultural Architect and Builder  
West Side Ave Station (C.R.R. of N.J.) Jersey City, N.J.

### The Advance Ventilating Apparatus

Our new pipe couplings makes the work of coupling up the shafting pipe an easy task. Beats anything on the market. We have other good practical things in our line that our patrons appreciate. Best of material, superior principles, ease of operation and perfection, makes it popular everywhere. Give us a trial. You will come again. They all do.

# DREER'S CONVENTION MONTH SPECIAL OFFERS

## Cocos Weddeliana

A grand lot of plants in 7-in. pots, elegant, graceful specimens 24 inches high, perfect in every way, something entirely different from what you have been offering to your customers in the decorative line heretofore, and a plant which will appeal to everyone. Price 75¢ each, also a smaller size in five inch pots, 24 inch high, at \$1.00 each.

We are also carrying in stock a elegant line of the usual sizes for Fern Dishes in good shape, 2 1/2 inch pots, 5 to 6 inches high, \$1.50 per dozen, \$10.00 per hundred, \$2.00 per thousand; 4 inch pots, 6 to 7 inches high, \$2.00 per dozen, \$15.00 per hundred, \$14.00 per thousand.

## Our Exhibit at the Convention

During the Convention we will have an exhibition at Niagara Falls, N. Y., a full line of samples.

Our entire staff of travelers will be in attendance and will be pleased to give any information desired, and show samples.

Delegates attending the Convention are cordially invited to stop off at Philadelphia (either going or returning) and inspect our Nurseries at Riverton, N. J., where you will always find something to interest you.

## KENTIAS

Although the stock of Kentias generally is scarce not only in this country but also in the Palm centers of Europe, you will find our stock of nearly all sizes very complete, and all here offered of excellent quality and market value.

### A WONDERFUL NEW NEPHROLEPIS

# Nephrolepis Superbissima

## INTRODUCTION OF 1908

**W**E desire to call attention to this new fern, which originated with us and which we are introducing this year. It is a **very unique and distinct novelty**—as distinct from *Nephrolepis Piersoni* and *Piersoni elegantissima* as they were from *Bostoniensis*. It is in fact a complete break. The fronds are very heavily imbricated, the pinnae overlapping, making the fronds very dense and compact.

It differs from the other *Nephrolepis* not only in form, but also in color, being a **richer and darker green**—entirely different from the yellowish green of all the other *Nephrolepis*. The plant is very sturdy in its habit, the fronds never breaking down.

While a photograph shows a similarity to its predecessors, it is absolutely distinct, not only in the formation of the fronds and color, but also in its habit and general characteristics. It makes a much more dwarf and compact growth, the fronds being very dense, firm and rigid, and having a great deal more substance, so that it **will stand more knocking around than any other fern of this type.**

It is a sterling novelty. Experts who have seen it consider it by far **the best fern ever sent out.** It is a plant that needs to be seen to have its great value and sterling qualities appreciated. It really is not in the same class with the other varieties. It was awarded a

### ... FIRST-CLASS CERTIFICATE ...

by the Royal Horticultural Society at Crystal Palace in London, November, 1907, the plants exhibited there having been shipped from New York two weeks before that time. After being exhibited in London, the same plants were shipped to Edinburgh, Scotland, where they were again awarded a first-class certificate by the Scottish Horticultural Society. This will indicate the value of the plant as a novelty, and also demonstrates in a very conclusive manner its fine keeping and shipping qualities. We have just begun shipping advance orders, and new orders can now be shipped immediately on receipt.

*Do not fail to see our exhibit at the S. A. F. Convention, Niagara Falls.*

Fine, strong plants. 2 1/2 inch pots, \$5 per dozen, \$35 per 100; 4 inch pots, \$7.50 per dozen, \$50 per 100; 6 inch pots, \$1.50 each, \$15 per dozen.

## Notes from the Arnold Arboretum.

An exceedingly handsome Holly and the earliest of all to ripen its fruit is the Japanese *Ilex geniculata*. It is an upright shrub attaining six feet in height and probably more, with spreading branches now bearing a profusion of small bright scarlet fruits gracefully hanging down on slender thread-like stalks from the spreading branches. The fruits are small about the size of a small pea, but are produced in great abundance and stay on the branches unchanged until after the leaves have fallen. The leaves are about two inches long, ovate-lanceolate, glabrous and turn yellow in autumn. The flowers are insignificant like those of the other species of the genus and appear in May. The species is still very rare in cultivation and hardly known outside of the Arboretum; it was introduced to the Arboretum about fourteen years ago directly from Japan where it seems to be also a rare shrub growing in the higher mountains, and has proved perfectly hardy at the Arboretum. The *Ilex geniculata* is dioecious, but we fortunately possess both sexes and therefore fruits are produced abundantly on our pistillate shrubs.

The Buffalo-berry, *Shepherdia argentea* (*Lepargyrea argentea*), is another very handsome fruiting shrub; its branches are now thickly studded with bright scarlet glossy berries, some of them so loaded with fruits that they are bent down by their weight. The effect of the shrub is heightened by the silvery white color of the foliage and branches. The Buffalo-berry is a thorny straggling shrub attaining fifteen or eighteen feet in height, sometimes almost tree-like, and is on account of its drought resisting qualities and great hardiness well suited for dry and exposed situations; it is dioecious and in order to be sure of a good fruit supply both sexes must be planted together. The allied *Shepherdia canadensis*, a lower shrub with the branchlets and the under side of the leaves brown-colored, produces its red or yellow fruits less abundantly and is somewhat difficult in cultivation; the fruits of both species are used for jellies.

Of the *Euonymus* the earliest species to ripen its fruits is the dwarf *Euonymus nanus*. It is a pretty shrub scarcely exceeding two feet in height with partly trailing branches and particularly adapted for rocky or sandy banks and slopes; it is half-evergreen and in mild winters the narrow, small leaves which turn dark purple late in fall remain on the branches until spring. Sometimes it is grafted high on *E. europaeus* or any other tall growing species and forms thus very graceful small standard trees with spreading and slightly pendulous branches particularly handsome in August, when the pinkish fruits hanging from the branches on slender stalks disclose the bright orange seeds.

The earliest of the red-fruited Hawthorns to ripen its fruits is *Crataegus Arnoldiana*. It is a native species found in a wild state only in the Arnold Arboretum and near Medford, Mass., and grows into a tree up to twenty feet high with a short trunk and a broad and open head; its conspicuous bright crimson fruits ripen about the middle of August and drop before the beginning of September. *Crataegus nigra* from south eastern Europe and the western *C. circularis* and *C. Douglasii* ripen their fruits about the same time, but they are of a purplish black color and therefore much less showy. Also the fruits of *Crataegus Oxyacantha* are now beginning to assume their red color.

*Prunus hortulana* and *P. Watsoni* are looking quite

handsome with their large bright red fruits between the lustrous bright green foliage; the fruits, however, drop as soon as they are ripe. The first species is a tree reaching sometimes thirty feet in height, while the latter is a dense shrub about three to six feet high. The Dwarf Cherry, *Prunus pumila*, holds still its purplish black fruits and the glossy bright red fruits of *P. pennsylvanica* adorn yet its branches.

*Cornus circinata* is very handsome with its cluster of bluish white fruits effectively set off by their red stalks against the pale green foliage; though the individual clusters ripen comparatively few fruits the red color of their stalks makes up for their paucity and gives the shrub a very distinct appearance. *Cornus paniculata* also begins to ripen its white fruits whose reddish stalks likewise heighten the effect of the fruiting clusters. The fruits of *Cornus obliqua* (*C. Purpusii*), formerly usually classed with *C. Amomum*, assume their peculiar pale blue color and the shrub attracts attention on account of the rather unusual color of its nodding clusters of fruits. All these species are shrubs of about six to twelve feet in height, but differing markedly in habit; the first is a strictly upright dense shrub of roundish outline, while the second has its slenderer stems more or less bending over at the top; the third species is of spreading, rather loose habit and usually broader than high.

Alfred Redder.

## What They Think of Horticulture in Belgium

In our Belgian contemporary, "La Tribune Horticole" of Brussels, we notice in the issue for July 11, the following remarks, which will interest our readers:

"Among all the American horticultural journals our excellent contemporary, HORTICULTURE, of Boston (U. S. A.), appears to us to be the best informed on the progress of European horticulture. We have often noticed in its columns capital accounts of the English and French shows, notices of new English and French books and other articles by writers in the old world. The last number of HORTICULTURE has just reached us and we there find a detailed account of the Paris Spring Show, illustrated with a charming engraving."

### FROM "ENDYMION."

A thing of beauty is a joy forever:  
Its loveliness increases; it will never  
Pass into nothingness, but still will keep  
A power quiet for us, and a sleep  
Full of sweet dreams, and health, and quiet breathing  
Therefore, on every morrow, are we wreathing  
A flowery band to bind us to the earth,  
Spite of despondence, of the inhuman dearth  
Of noble natures, of the gloomy days,  
Of all the unhealthy and o'erdarkened ways  
Made for our searching, yes, in spite of all,  
Some shape of beauty moves away the pall  
From our dark spirits. Such the sun, the moon,  
Trees old and young, sprouting a shady boon  
For simple sheep; and such are daffodils  
With the green world they live in; and clear rills  
That for themselves a cooling covert make  
'Gainst the hot season; the mild forest brake,  
Rich with a sprinkling of fair musk-rose blooms:  
And such, too, is the grandeur of the dooms  
We have imagined for the mighty dead;  
All lovely tales that we have heard or read;  
An endless fountain of immortal drink,  
Pouring into us from the heaven's brink.

—John Keats.

## Vandas.

VANDA TRICOLOR.

The genus *Vanda* is amongst the most fascinating in the orchid family, nearly all the species having strikingly showy, fragrant flowers and handsome evergreen foliage. *Vandas*, with the exception of *V. coerulea*, *V. Kimballiana* and *V. Amesiana*, which should be grown cool, may be grown in any kind of a warm greenhouse, one devoted to palms and ferns being very suitable, providing the shade is not too dense.

While *Vandas* will accommodate themselves to various modes of treatment, and will live and flower for many years under most unfavorable conditions, a moist atmosphere is essential to their well-being. They should also be given plenty of light, as in a dark, damp atmosphere there is danger from black spot. An excessively dry atmosphere causes the plants to lose their lower leaves and is also conducive to the rapid breeding of a species of small scale which quickly disfigures the foliage, and is very difficult to eradicate.

All the species do best in pots, in a mixture of broken crock and charcoal, surfaced with sphagnum moss. When the plants get too tall the top may be taken below a few aerial roots and potted. Spring or early summer just when new roots are making their appearance is the best time to perform the operation. The old stumps will invariably break. Sometimes the finest plants are obtained in this way. The removal of the lead causes the plant to break in many places.

The subject of our illustration is a fine variety of *V. tricolor*, which flowered for the first time in the once famous Corning collection, Albany, N. Y., under the care of Mr. Grey. The color of the flowers is bright yellow, spotted with dark crimson, the lip is a rich, deep blue.

*Vanda coerulea* is rapidly becoming a commercial orchid, its intensely blue flowers being much sought after for special use in fall and early winter. As previously stated, it should be grown somewhat cool, in a moist situation with a very light shade in summer, and full sunshine in winter.

*James Hutchinson*

Pittsburg, Pa.

## New Roses at Paris.

Many inquiries having reached me as to the judging of the new roses at Paris and some reports having been published which need restating, in order to put the

matter correctly before Americans interested, I deem it best to briefly state the case:—

The City of Paris, France, is anxious to do everything possible to make the city attractive to visitors; with this in view and in order to give an additional attraction, the Municipality, at the instigation of M. Jules Gravereaux has established in the great park known as the Bois de Boulogne the Garden Bagatelle, which is given over to roses, the garden being under the able management of M. Forestier.

The call was issued last autumn and winter asking the originators of new roses to send four plants of each of their new varieties for planting in the Garden Bagatelle; these rose plants were set out in beds, each variety being grouped together. There were 87 rose novelties submitted and planted, making a total of 348.

The prizes were—The Grand Prize of Bagatelle, a large gold medal given by the City of Paris; two Premier Prizes, 1st given by the Minister of Agriculture, the 2nd by the National Horticulture Society of France; two Second Prizes, 1st by the Rose Section of the National Horticulture Society, 2nd by the French National Rose Society.

The competition was most interesting and unique in character.

The jury was composed of: M. A. Chenoux, President of the Municipal Council of Paris who is chairman; Arthur Paul, of England; Peter Lambert, Germany; Constant Soupert, Luxembourg; E. G. Hill, United States; Jules Gravereaux, Pernet, Leveque, and Chatenay, representing the National Horticultural and the National Rose Societies of France.

The jury forming themselves into a committee decided that a second judging of these roses should take place in September next when the final awards will be made. The committee was led to this conclusion by the fact that a few of the roses were past their best estate so far as bloom was concerned, a number not being in bloom at all. It was thought best in the interest of all who had submitted and sent their roses to be judged that strict equity demanded a second judging.

All the judges agreed to return at the call of M. Gravereaux at such time in September as he deemed best, excepting of course the representative from the United States.

The awards so far made, and which are subject to increase, were as follows, 10 points being the maximum:—Lyon-Rose from its unique color seemed to take the lead and was voted the maximum number of points. All the varieties scoring from 5 points up certainly possessed qualities that should make them permanent additions to our list of good roses. I was sorry that Mr. John Cook's rose "My Maryland" did not have a flower or bud showing; I look for this variety and others to make their mark at the second judging. In the event of a number of varieties receiving the maximum number of ten points, the judges will vote as to their respective positions and the prizes will be awarded accordingly.

At the conclusion of the judging one of the most elegant dinners was served that it has been my pleasure to enjoy; we were further shown every nice attention imaginable. The exhibit as planned and carried out at the Garden Bagatelle is an innovation on all previous methods employed for arriving at the good qualities of new roses and the experiment is certainly worthy of careful study and thought. My own opinion is this:—the roses submitted should be established the previous

summer or season so that they might show their possibilities under good root action; 2nd, as the varieties of roses vary a few days in their time of flowering it would seem important that the jury have several inspections so as to see the varieties at their best when passing upon them.

I believe that to M. Jules Gravereaux belongs the credit for the inception of this novel method of exhibiting roses. M. Gravereaux is certainly one of the most enthusiastic as well as one of the most practical rosarians living, as a visit to his wonderful Rose Garden will attest.

The Committee's report, subject to revision in September, is as follows:

- |           |  |
|-----------|--|
| 10 points | Lyon-Rose (Hy. Tea) de M. Pernet-Ducher, a Venissieux les-Lyon.                |

## Roses Under Glass.

### SEASONABLE SUGGESTIONS.

This is the season when we may expect, and usually get, a few samples of the stickiest, most disagreeable brand of weather operated by the Weather Bureau, and in spite of all our watchfulness and care, the stock often shows a tendency to run soft. To guard against this as much as possible, it is necessary to study the condition of the soil most thoroughly before each application of water.

The excessive humidity with which the atmosphere is charged at this season, prevents, to a considerable extent, the proper evaporation of moisture from stock and soil, and unless these conditions are carefully considered and given weight in the administration of the essentials such as air, and water, etc., that rank, yellow, soft growth, at once so undesirable and unpleasant to the eye, will inevitably result.

Frequent cultivation of the soil helps to keep it sweet and prevents green scum from forming on the surface, and should be practiced until the roots approach the surface.

Disbudding, when properly done, has a great influence on the future constitution of a plant and should therefore be performed, not hurriedly—but with care and precision. Some varieties, Richmond in particular, do not break readily if the buds are allowed to open wide before they are removed, and, if, as the writer has observed occasionally, a large percentage of buds are allowed to reach this stage of development, and are then cut off as quickly as a man can get around them, the plants receive a check from which they do not readily recover. The proper time and condition in which to take the buds of the different varieties can be determined by the grower only after he has carefully noted the result of each operation during the entire season. It is, however, quite safe and often beneficial, to cut off the buds just before or when they begin to show color.

As the season advances, ventilation will require more care than was accorded it during June and July, and, while plenty of air is absolutely essential to the stock, draughts and sudden fluctuations of temperature must be avoided as much as possible. Especially does this apply to plants that have made a soft and rapid growth, as, when in this condition, they are very susceptible to mildew and other troubles. Caterpillars usually get busy about this time and the grower who loves his roses, should have no scruples in squashing the ambition of these voracious little pests.

Frequent syringing will serve to keep red-spiders in check, if it is done properly, and accompanied by a good force of water. A good nozzle is of incalculable value to the grower, as without one, syringing is a most laborious and disagreeable task. The Wittbold nozzle is well adapted to the rose grower's needs as, by a simple adjustment, either young grafted stock, or old established plants may be syringed effectually and with perfect safety.

Although green-fly are not so troublesome during the summer months, the houses should be fumigated once a week "if possible," with tobacco, which will prevent their gaining a foothold, and make it easier to keep them in subjection during the winter.

All indications point to a record of heavy attendance at the S. A. F. Convention. It must be evident to all that this organization, while grievously lacking in the support it is well entitled to in certain sections, has greatly strengthened its hold upon the affections of the mass. The additions to its active membership, it is also well to note, are conspicuously of the younger element and the vacancies caused by the depletion of the ranks of the pioneers by infirmity or death are being steadily filled by vigorous young blood such as any organization should be proud to acquire. We have taken occasion, heretofore, to commend this unique society for the wisdom with which it has shaped its policies so as to satisfy and hold the attention of the many and varied interests which compose its membership. Rarely, if ever, has there been a similar instance of persistent cohesion between elements so unlike.

## Shaping the course for the future

Unquestionably, the S. A. F. has been singularly successful in solving the problem of combining to good advantage in an organized capacity, pleasure and profit, education and business uplift. Changes in policies of such a body should be approached with extreme caution and yet there is need that strong hands and loyal hearts should be continually devoted to the task of strengthening the foundations, crystallizing on progressive lines the purposes and extending the field of the society's scope and activities. Not by what has been accomplished in the past will the coming years be judged, but by the way new conditions are faced as they arise and fresh avenues for useful service are opened up. Many of us have our ideals as to what the S. A. F. should be in the years to come, what it should undertake and what it should not undertake. Let us consider them well for they may not all be wise and mistakes in such matters are very costly. It is a duty every beneficiary of this organization owes to it and to himself to give some of his best thought to the consideration of every proposition having a bearing upon its future and then advocate and work for what he is convinced will help to make the society bigger, stronger and more and more a powerful factor in the onward progress of American horticulture.

## Value of the exhibition

Wide-awake commercial florists and plantmen are looking forward with interest to the trade exhibition at Niagara Falls. This feature, once an adjunct of only moderate importance in the annual meeting of the S. A. F., has rapidly advanced until, in the estimation of many, it has become the chief attraction of the Convention. Contrary to the expectations of some, it is now certain that the exhibition at Niagara Falls next week will outrank in size the very successful affair at Philadelphia last year, and promises to be in even greater degree than ever before, the main support and strength of the Convention in its capacity as a commercial invigorator. Many have come to look upon this spectacular exposition as the opening, in fact, of the new season. Here are spread out for the critical consideration of grower, dealer or tradesman every new product, every kind of implement and supplies, every recent improvement in equipment, every novelty which diligent quest has brought to light from the factories and markets of the world. Here, in contemplation of these manifold evidences of the vast proportions to which their business has now attained, producer and retailer are also inspired and invigorated with the spirit which put into their business activities will make them well nigh invincible. The man who goes to the Convention determined to make the best of his opportunities will return well equipped with the substantial knowledge and healthy stimulus which make so strongly for permanent success.

## Horticulture at the Franco-British Exhibition

This great exhibition appears to be exciting a good deal of interest both in England and France and in the open air gardens there is an excellent display of a permanent character chiefly by French nurserymen. The famous house of Vilmorin, Andrieux & Co., are large exhibitors. Roses are shown in great numbers by Pierre Guillot, Levavasseur & Son, Pernet-Ducher, Chl. Molin, Croibier & Son, R. Goyer, Laveque & Son, Louis Leroy, Ad. Rothberg. Other open air exhibits are from Aug. Nonin, Croux & Son, Abel Chatenay, Cayeux & Leclerc, Lagrange, Bruant Millet & Son, Ferard, and others. Trained fruit trees come from other well-known firms.

We notice that our esteemed contributor Mr. Harman Payne has commenced a series of articles in our French contemporary "Le Jardin" of Paris, dealing with the horticultural aspects of this great exposition. It is worthy of note that Mr. Harman Payne is the only English writer who contributes to the French gardening press and he is a very popular man among the French horticulturists, who have more than once testified to their high appreciation of his literary work in connection with French horticulture.

### CARE OF NEWLY PLANTED STOCK.

Planting is now well under way and the dry season which has been quite general throughout the country has helped to give us all a fine lot of sturdy plants. The stock in the field as a whole has not made that soft, lanky growth which is apt to occur in wet seasons. When benching the field plants care should be taken to keep the stock in as vigorous condition as possible. Judicious syringing and watering help materially to give the plants a good start towards the work which they are expected to do during the coming season. The question of shading newly planted stock is of importance and subject to differences of opinion, but there can be no harm done by shading lightly providing it can be removed readily within a few days. Under no condition should newly planted stock be kept shaded for any great length of time. A very handy way and one which answers the purpose, is to mix some sticky dark colored clay or heavy soil in water and spray the glass; then if a shower does not come along within three or four days the hose may be used and in a very short time the glass is clean.

After planting, the stock should receive a thorough watering, but after this they should not be watered until the soil is fairly well dried out and the beds should be kept in a moderately moist condition, rather on the dry side than too wet until the plants start to make new roots when they will be ready to take quite liberal quantities of water.

Syringing should be kept up steadily for about the first two weeks, after which time they should only be syringed often enough to keep off red spider. It is well during the very warm days to dampen down the walks, sides of the houses and overhead lightly, during the middle of the day. This will help to keep the temperature down and keep the plants in a growing condition.

Topping should be continued until the plants are of good size, but if large strong plants are benched and early blooms are wanted it is not necessary to pinch

back until the plants are strong enough to stand the long shoots which were on the plants before they came from the field.

As the weather grows hotter the watering must be governed accordingly, as it is at this season that a check is often given stock which proves disastrous for the balance of the season.

LOUIS J. REUTER.

## Dianthus Napoleon III

According to our horticultural dictionaries "Dianthus" means "Divine Flower," and Dianthus Napoleon III. is certainly one of the most exquisitely divine hardy flowers we have. I am not sure, but think that it was introduced some twenty-five or thirty years ago. Owing to excessive propagating it became diseased and lost to the trade but, thanks to private gardens, was saved from being entirely lost. It was re-introduced some five or six years ago and this time has come to stay, for we know enough to go easy in propagating when so much weakness and disease are caused by overdoing it.

It has none of the straggling habit that so many of the other species of pink have, but grows in compact sturdy tufts that have a handsome appearance; the foliage is unique, being of a dark green, instead of blue grey. The flowers are borne on spikes eight to twelve inches high, each spike bearing from five to ten buds; the stem is wiry, standing well above the foliage. The flowers are double, well-formed, and in color a deep, rich crimson. It is hardly necessary to mention its cutting qualities, for nearly everything in the pink family is fine for that purpose.

The wonderful blooming period is not the least of its many attractions. It not only stays in bloom from June till stopped by frost, but flowers so freely that from a dozen or so plants there would always be some flowers ready to use. Its fragrance is of that popular clove variety so pleasing to all.

Last winter was one of the most trying for herbaceous plants, especially for those having foliage on all winter, like this Dianthus. In spite of this, with some covering, it came through the winter well.

Frederic J. Rea.

The next issue of HORTICULTURE will contain a full account of proceedings at the 24th. convention of the Society of American Florists and Ornamental Horticulturists at Niagara Falls, the exhibits and awards and other interesting news so far as completed up to the time of going to press. By the thousands of interested horticulturists not in attendance at the convention this will be perused with attention and the paper will be an especially good medium for advertisers because of this fact. You can feel assured that anything you may offer in that issue will enjoy a widespread and remunerative publicity. Send copy in now while reminded of it and we will do the rest.

## Officers For 1908.

PRESIDENT—F. H. Traendly, 14 W. 28th St., New York, N. Y.

VICE-PRESIDENT—Geo. W. McClure, 832 W. Delavan Ave., Buffalo, N. Y.

SECRETARY—W. N. Rudd, Morgan Park, Ill.

TREASURER—H. B. Beatty, Farmers' Bank Bldg., Pittsburgh, Pa.

## Directors.

For One Year; E. V. Hallock, Theodore Wirth.

For Two Years; Samuel Murray, J. K. M. L. Farquhar.

For Three Years; George Asmus, John Young.

Ex-Officio; Wm. J. Stewart.

## State Vice-Presidents

Alabama—J. L. Parker, Birmingham.

California—Sidney Clack, Menlo Park.

Colorado—N. A. Benson, Denver.

Connecticut—G. X. Amrhn, New Haven.

District of Columbia—Geo. H. Cooke, Washington.

Florida—E. N. Reasoner, Oneco.

Georgia—V. E. Lambert, Atlanta.

Illinois—F. Lautenschlager, Chicago; J. F. Ammann, Edwardsville.

Indiana—J. Bertermann, Indianapolis.

Iowa—J. A. Kramer, Cedar Rapids.

Kansas — Oscar Roehr, Topeka.

Kentucky—A. R. Baumer, Louisville.

Maryland—R. A. Vincent, White Marsh.

Massachusetts — F. E. Palmer, Brookline; A. J. Loveless, Lenox.

Michigan—A. Pochelon, Detroit; H. Smith, Grand Rapids.

Minnesota — R. A. Latham, Minneapolis.

Mississippi—S. W. Crowell, Rich. Missouri—J. Steidle, Central; W. L. Rock, Kansas City.

Nebraska—Lewis Henderson, Omaha. New Hampshire—H. C. Stache, Manchester.

New Jersey—A. Herrington, Madison.

New York—G. C. Perkins, Newark; J. Austin Shaw, New York.

North Carolina—W. Rehder, Wilmington.

Ohio—E. G. Gillett, Cincinnati; C. J. Graham, Cleveland.

Pennsylvania—E. J. Fancourt, Philadelphia; T. P. Langhans, Pittsburgh.

Rhode Island—Carl Jurgens, Newport.

South Carolina — C. A. Moss, Spartansburg.

South Dakota—E. C. Newberry, Mitchell.

Burdett; Local Management, Privileges and Concessions, J. C. Vaughan; Special Features, Otto Koenig; Reception, August Poehlmann; Auditing, J. A. Valentine. The above nine chairman constitute The Executive Board of the Show.

Committee on Tariff—F. R. Pierson, Chairman; J. A. Valentine, Benj. Hammond.

National Council of Horticulture—Robt. Craig, J. K. M. I. Farquhar.

Committee on Standard Pots—Robt. Craig, John Birnie, F. E. Palmer.

Past Presidents—John Thorpe, 1884-1886; Robert Craig, 1887; E. G. Hill, 1888; J. N. May, 1889; \*J. M. Jordan, 1890; M. H. Norton, 1891; James Dean, 1892; William R. Smith, 1893; \*J. T. Anthony, 1894; Edwin Lonsdale, 1895; \*William Scott, 1896; Adam Graham, 1897; W. F. Gude, 1898; W. N. Rudd, 1899; \*E. M. Wood, 1900; Patrick O'Mara, 1901; John Burton, 1902-1903; Philip Breitmeyer, 1904; J. C. Vaughan, 1905; Wm. F. Kasting, 1906; Wm. J. Stewart, 1907.

\*Deceased.

#### TRANSPORTATION.

Points West and South of Buffalo, and Canadian Points.—Reduced

rates have been refused by the passenger associations covering this territory. There are, however, from nearly all cities reduced excursion tickets and return, also to Toronto on sale to Niagara Falls and return by way of Niagara Falls, with stop-over privileges. Members are advised to consult with their local ticket agents, and also to communicate with the secretaries of florist clubs in the larger cities, with a view to joining their parties and taking advantage of any special arrangements they may make.

Points in the U. S. East of Buffalo, including Pennsylvania, West Virginia, Maryland and the City of Washington and Vicinity.—(Territory covered by the Trunk Line Association and the New England Passenger Association, except the Bangor & Aroostook R. R., the Eastern Steamship Company and the N. Y., O. & W. R. R.)

A concession of fare and three-fifth on the certificate plan has been secured for those attending the meeting of Society of American Florists and Ornamental Horticultur-

ists, Niagara Falls, N. Y., August 18-21.

#### PROGRAMME.

First Day, Tuesday, August 18—Opening Session, 2 P. M.

Address of welcome and responsive address.

#### President's Address.

Annual address of the President. Reports of Secretary, Treasurer, State Vice-Presidents, Committees and other officers.

H. B. BEATTY, TREASURER.

CATARACT AND INTERNATIONAL HOTELS — CONVENTION HEADQUARTERS.

**Judging Exhibits.**

Judges will examine and prepare their reports upon the novelties and new inventions in the trade exhibition immediately after the close of the opening session.

**Florists Hall Association, 4.30 P. M.**  
Annual meeting.

**President's Reception, 7.30 P. M.**

**Second Day, Wednesday, August 19—**  
**Morning Session, 9.30 A. M.**

The members of the Canadian Horticultural Association will attend this session. Welcome to our Guests, by President Traendly. Response by President Walsh. Paper—Fertilizers and Fertility, J. F. Cowell. Discussion.

**Selection of Next Meeting Place and**  
**Nomination of Officers.**

The selection of the location of the next meeting (polls open one hour) and nomination of officers for next year will take place at this session.

**Ladies' Auxiliary.**

Ladies' Auxiliary of the S. A. F. & O. H., 10 A. M.—annual meeting.

**Afternoon, 2.30 P. M.**

The members of the S. A. F. & O. H. are invited to attend the session of the Canadian Horticultural Association at the Clifton House, Niagara Falls, Ontario.

**Evening Session, 7.30 P. M.**

Illustrated Lecture by J. Horace McFarland—How Florists May Aid in the Crusade Against Ugliness. The members of the Canadian Horticultural Association are invited to be present at this meeting, and the public will be admitted. Admission by ticket, to be obtained from Secretary Ewing, for members C. H. A.; Secretary Rudd, for members S. A. F. & O. H.

**Notice.**

All tickets not applied for by 12 o'clock noon, Wednesday, will be distributed to the public, and members delaying their application beyond that time must take their chances of tickets being available.

**Third Day, Thursday, August 20—**  
**Morning Session, 9.30 A. M.**

Paper—Out-of-Door Roses, W. C. Barry. Discussion.

**Election of Officers.**

Polls will be open at 10.30 A. M., and remain open two hours.

Amendments to the Constitution and By-Laws.

The Question Box.

**Afternoon Session, 2 P. M.**

The National Flower Show.

Address—E. G. Hill. Reports—W. F. Kasting, J. C. Vaughan. General discussion.

**American Carnation Society, 4.30 P. M.**  
Special meeting.

**Evening.**

The evening session will be omitted in order to allow the members an opportunity for an evening view of the Falls and other scenery.

**Fourth Day, Friday, August 21—Morn-**  
**ing Session, 9.30 A. M.**

Address—School Gardens, L. C. Corbett. Discussion.

Paper—State Florists' Associations, Their Value and the Relation They Should Bear to the S. A. F. & O. H., Albert T. Hey. Discussion.

Paper—Planting for Winter Effect in the Northern States, George E. McClure. Discussion.

**Afternoon and Evening.**

In the hands of the Buffalo Florists' Club. The bowling contests will be held at Buffalo at this time.

**HOTELS AT NIAGARA FALLS.**

It seems fair that it should be made known to the members of the S. A. F. & O. H., that exhibition hall, meeting hall, business office, space for outside display, and music and refreshments for the President's Reception have all been furnished to the Society by Mr. Isaacs, free of charge. These accommodations which he has furnished us, the writer believes cost over \$1000.00 last year, and have cost very large sums in almost every place where the Society has met before. The amount

of profit of the Society from the trade exhibition last year was only a little over \$100.00, but through the generosity of Mr. Isaacs this year, it will be at least \$1000.00 more than that.

Mr. Isaacs is the manager of the Prospect House, Cataract House and the International Hotel.

Mr. McClure and Mr. Cutler assure us of fair treatment and reasonable rates, and the writer feels it his duty to urge upon the members of the Society to give these houses the preference, so far as they can do so without inconvenience to themselves.

All indications point to a large attendance, one of the largest trade exhibitions ever held, and a most successful convention in all respects.

W. N. RUDD, Secretary.

**LADIES' SOCIETY OF AMERICAN FLORISTS.**

The Ladies' Society of American Florists will meet Wednesday and Thursday mornings, Aug. 19 and 20, 10 A. M. at the Shredded Wheat Auditorium. A meeting of the board of directors and officers is called at 9.30 A. M., Wednesday, Aug. 19, same place. Members, don't forget your badge pin. Those who have not paid their dues will find the secretary in the Trade Exhibition.

MRS. W. J. VESEY, President.

**JUDGES OF THE TRADE EXHIBITION.**

President Traendly has appointed the following as judges of the Trade Exhibit, at the coming convention at Niagara Falls: Chas. J. Graham, Cleveland, Ohio; Joseph A. Manda, West Orange, N. J.; Fred H. Meinhardt, St. Louis, Mo.

W. N. RUDD, Secretary.

**NATIONAL FLOWER SHOW.**

There will be a meeting of the Committee of Fifty in Niagara Falls, the afternoon of Thursday, August 20, 1908. This call is issued at the direction of Chairman W. F. Kasting who requests that each member attend and that each committee be ready with

a comprehensive report of work done and suggestions to be offered. The work of the show must be pushed from now until November. On receipt of this notice please communicate with the chairman of your sub-committee and assist him in preparing his report.

Chairman George Asmus of the publicity committee urges that all intend-

ern Central, joining Philadelphia party at Harrisburg.

Chicago: Wabash Railroad. Special train. Several concessions in the way of stop-over privileges, choice of boat routes, etc.

St. Louis: Big Four Railroad. Knickerbocker Special.

Cincinnati: Cincinnati, Hamilton & Dayton Railroad to Detroit, thence by boat to Buffalo and rail to Falls.

Detroit: Steamer to Buffalo, thence by rail to Falls.

#### HORTICULTURE AT THE CONVENTION.

HORTICULTURE'S office will be located in the Cataract Hotel close to the entrance to the meeting hall. A good supply of this issue of the paper will be on hand for free distribution and we shall be glad to have our friends call and exchange greetings. Some one will be in attendance during regular business hours to receive subscriptions and advertisements or attend to any other business connected with the publication. Give us a call.

#### AMERICAN ROSE SOCIETY MEETS AT NIAGARA FALLS.

A meeting of the members of the American Rose Society will be held during the convention of the Society of American Florists at Niagara Falls to transact any business that may come up. The officers elected at the annual meeting last March will take the places of the outgoing officials. August Poehlmann of Morton Grove, Ill., succeeds Robert Simpson of Clifton, N. J., who has held the presidency for the last two years. W. F. Kasting becomes vice-president, succeeding Philip Breitmeyer of Detroit.

The effort to make the American

#### MASSACHUSETTS HORTICULTURAL SOCIETY.

On Saturday, August 8, the scheduled exhibition came off and was of excellent quality throughout. Following are the awards:

Perennial Phloxes:—1st, Wm. Whitman; 2d, George Hollis; 3d, T. C. Thurlow & Co.; 4th, Bellevue Greenhouses. Annuals:—1st, Wm. Whit-

CHAS. H. KEITSCH,  
Superintendent of Exhibition.

ing exhibitors in the national flower show who have new varieties of carnations, chrysanthemums, roses or any other flower to enter, or novelties of any nature, provide the publicity committee with photographs of the same at the earliest possible moment, in order that the novelty may be written up for the newspapers to the benefit of the show and the exhibitor. Considerable advantage may be gained by judgment in the choice of names for new varieties. It is suggested that newspapers show greater interest in new varieties that are named for women of social prominence, and by choosing the name of such a woman in his own locality for his novelty, the exhibitor would confer a graceful compliment upon a possible customer and also help along the show. This may seem a small matter but it is likely to have large effect upon gate receipts. Photographs of the women for whom new varieties are named should be sent to the publicity committee wherever possible. Photographs of flowers for newspaper use should be made as large as possible, showing no background and detail as clear-cut as can be made.

J. H. BURDETT, Sec'y.

#### Routes Selected by Various Delegations.

From New York: Delaware, Lackawanna and Western Railroad. Special train.

From Boston: Boston and Albany and New York Central.

From Philadelphia: Pennsylvania Railroad via Harrisburg and Northern Central Railroad.

Baltimore and Washington: North-

CHARLES SANDIFORD,  
President Buffalo Florists' Club.

Rose Society financially solid has met with response from one and another and one of the members has promised that if the general membership does not respond fully on or before the date of this meeting he will see that the total balance of the deficiency is made good.

BENJAMIN HAMMOND, Sec.  
Fishkill-on-Hudson, N. Y..

JOHN WALSH,  
Pres. Canadian Horticultural Asso.

man; 2d, Mrs. J. L. Gardner; 3d, Mrs. E. M. Gill.

First Class Certificates of Merit, Cultural:—Wm. Whitman, *Lilium tigrinum*.

Honorable Mention: R. & I. Farquhar & Co., *Dahlia* Mrs. Charles Lanier and *Cactus Dahlia* Queen Wilhelmina; F. J. Rea, *Delphinium hybridum* var. *Persimon*; B. H. Tracy, seedling *Gladolus*.

Vote of Thanks:—R. & I. Farquhar & Co., display of *Lilium auratum*, *dahlia*s and herbaceous plants.

Other exhibits worthy of note were, herbaceous plants from F. J. Rea, Bellevue Greenhouses, Wm. Whitman, Mrs. A. W. Blake and Blue Hill Nurseries. The fruit section was well filled by a number of prominent growers of pears, apples, blackberries and peaches.

#### MT. DESERT FLOWER SHOW.

The Mt. Desert Flower Show, held under the auspices of the Flower Show Association, took place August 6 and 7, at the Building of Arts, Bar Harbor, Me. This proved to be one of the greatest successes ever made at Bar Harbor, being the first flower show ever held there and said to be the first ever held in the State of Maine. No show was ever located in a more beautiful spot, the building situated at the base of a pine-covered ridge on the north and, to the south, east and west the mountain scenery with its valleys and gorges is grand.

The committee, to whom great credit is due for the wonderful success of the affair, is comprised of ladies and gentlemen, all summer residents.

To Robert Cameron, Botanical Gardens, Cambridge, Mass., who had

charge of the placing of exhibits, great credit is due for the effective and most charming arrangement. The exhibits exceeded the expectations of the summer visitors and were a revelation to the gardeners themselves. Kenneth Emmons of the Park Department, Boston, and Wm. N. Craig from the Ames estate, North Easton, Mass., served as judges.

Upon the left upon entering a table of snapdragon and penstemons made a gorgeous display, surpassing anything seen at the larger shows. Next was a grand display of baskets of flowers arranged for effect, some 18 or 20 competing. Mrs. Joseph Pulitzer, E. W. Exstrom gardener, secured the coveted prize; Mrs. J. T. Bowen, Arthur E. Chilman gardener, 2nd. Upon the right a table of large vases of phloxes and roses and carnations, arranged for effect, made a charming display. Further along were tables of annuals in variety, sweet peas and gladioli with stems 4 to 6 feet long. Honors in the sweet pea classes were very evenly divided. In Gladioli Mrs. J. T. Bowen carried the principal honors. The groups of stove and greenhouse plants arranged for effect were greatly admired, first honors going to John I. Kane, Kenneth McLean gardener, and second to Mrs. J. S. Kennedy, W. T. Burton gardener. There was a magnificent collection of stove plants from Mrs. Joseph Pulitzer. In this collection a superb specimen of Allamanda Hendersoni trained in umbrella form secured a certificate of merit, being easily the finest plant in the exhibition. The side tables on the left contained well grown plants of tuberous and Rex begonias, gloxinias, achimenes, fuchsias, etc., the competition in tuberous begonias being very keen, and first honors going to Mrs. John S. Kennedy with J. T. Bowen a close second.

In the gallery a grand display of fruit attracted much attention; especially noticeable were two superb bunches of Muscat of Alexandria grapes shown by Geo. W. Vanderbilt, Edward Kirk gardener, which took first honors as well as certificate of merit. The competition in musk melons was strong, Geo. W. Vanderbilt securing first, and Mrs. Kennedy second. There were especially fine peaches and small fruits in variety. The State Exhibit of Insects in charge of Prof. E. F. Hitchins, State Entomologist, also drew much attention. The competition in vegetables in many classes was strong and a very creditable display made. They were arranged on tables on the northern loggia outside.

The southern loggia contained a fine exhibition of water lilies and other aquatics from Henry A. Dreer of Philadelphia. Upon the lawn were superb specimen hydrangeas from Mrs. Joseph Pulitzer and Mrs. Geo. Bowdoin.

The awards were blue ribbons and red.

WILLIAM MILLER.

#### ALBANY FLORISTS' CLUB.

The Albany (N. Y.) Florists' Club held its meeting at the greenhouses of P. Hyde with attendance of more than forty members. Four new members were elected and two proposed.

The recommendation of the committee to hold a clambake at Henkes Bros., Watervliet, was accepted and it was voted to include the ladies. The committee reported that the circular for the care of house plants was in the hands of printers and would be distributed at next meeting. W. Gloeckner offered an amendment to the by-laws changing the time of meeting from the first to the second Thursday in the month; to be acted on at next meeting. The question of aster disease or "yellows" failed to bring out much discussion, the general opinion being that the dry weather had not left many asters to be diseased, one member reporting that he did not have one to bring to the meeting. Mr. Sexton showed some fine flowers of Ipomoea Bona-nox which has blomed exceedingly well this season. Refreshments were served followed by music, vocal and instrumental. The next meeting place will be either at F. A. Danker's or W. W. Hamell's.

#### AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.

At the convention in session this week in Minneapolis officers were elected as follows: President, J. W. Duncan, Boston, Mass.; vice-presidents: East—John Henderson, Montreal, P. Q., and C. E. Keith, Bridgeport, Conn. Middle West—J. W. Rodgers, Cincinnati, O., and M. H. West, Chicago, Ill. West—Theodore Wirth, Minneapolis, Minn., and J. W. Thompson, Seattle, Wash. Secretary and treasurer, F. L. Mulford, Harrisburg, Pa.

Henry T. Blake of New Haven, Conn., was elected an honorary member.

Seattle, Washington, was selected as the place for the meeting of 1909.

#### DETROIT FLORIST CLUB.

Election of officers served as a great inducement for the members to appear at the August meeting. The following officers were chosen: Pres., Wm. B. Brown; vice-pres., M. Bloy; sec., J. F. Sullivan; treas., Walter Taepke. Ways and means were enthusiastically discussed for promoting the election of Mr. J. F. Sullivan to the secretaryship of the S. A. F. A sensation in the method of booming as exemplified by Detroit is promised. The Club invites all those who possibly can to unite with the Detroit party going to convention. The boat ride from here to Buffalo is something so enjoyable that it will never be forgotten. Those who desire a berth reserved aboard the boat will please notify Mr. Albert Pochelon, L. Bomb Floral Co. Detroit.

#### TARRYTOWN HORTICULTURAL SOCIETY.

The regular monthly meeting of the society was held on Friday evening, July 31st. Pres. Angus in the chair. The following gentlemen were elected active members: Wm. McIntosh, Tarrytown; Albert Hopper, Tarrytown; Alfred L. Squire, White Plains; Matthew J. Murtha, Tarrytown, and Albert Pettet, Hastings, N. Y. The prize for the evening was for

the best four vases of hardy phlox, awarded to Thos. Lee, gardener to Mrs. Sands, Irvington, N. Y., and honorable mention to Claude Wilson, Dobb's Ferry, for Stanhopea maculata. It was voted to hold no meeting in August.

#### CLUB AND SOCIETY NOTES.

Flower carnivals are announced in New York as follows: Bath, August 18-19; Springwater, August 20-21.

The greenhouse men and all interested in the growing of vegetables under glass at Grand Rapids, Mich., will hold a meeting on Aug. 15 for the purpose of organization to keep in touch with the markets of the country.

At the Sedgwick County Horticultural Society fair to be held in Wichita, Kan., during September, an effort will be made for a large fruit exhibit. Arrangements have been made with the Wichita Cold Storage Co. to keep all early consignments in cold storage.

The State Fair of Minnesota has outgrown its quarters and for the approaching fair of Aug. 31 to Sept. 5 Supt. J. M. Underwood finds himself with several applications for space from counties which he is unable to fill. An annex to the agriculture and horticulture building is to be erected at once for their accommodation.

The Oregon State Horticultural Society will meet in Portland on December 1, and the Northwest Fruit Growers' Association will follow with a three days' session. Plans are under way to make this "Horticultural Week" a notable one; several cups and other prizes will be offered for competition by the Horticultural Society.

At a dinner given at the Kebo Valley Club by the Mt. Desert Nurseries to the gardeners of Bar Harbor, Me., in honor of the judges at the recent flower show and to meet them, a committee consisting of Edward Kirk, A. E. Chilman, C. Shand, J. Renwick, Wm. T. Burton, Mr. Styles, Clarence E. Dow, Mr. Exstrom and William Miller, Mr. Miller being chairman, was constituted to form a Horticultural Society, with every prospect of success, the project receiving every encouragement from the summer residents. Two meetings have been called and subcommittees have been appointed.

#### VIVE LE CHRYSANTHEME!

We observe that the French National Chrysanthemum Society has just made a record. It has for some time been their ambition to have 1000 members. The difficulty in reaching this figure increases as the numbers increase, for losses by resignation and death reach a higher percentage. It is interesting to note that the society now consists of 500 members inclusive of 59 affiliated societies. Not a bad result for a society only thirteen years old.

C. H. P.

## A KALMIA LATIFOLIA PLANTATION IN MAINE.

The accompanying illustration may give an idea of the appearance, while in bloom, of a mass of mountain laurel (*Kalmia latifolia*) on the estate of Mr. William A. Rogers, in Kennebunk, Maine. The photograph was taken in the latter part of June this year, and about thirteen months after planting. The plants were wild, collected in central Massachusetts. They are planted for the most part in a rather light, sandy, friable, brown loam, much of which had to be added to the existing top soil, which was of the same character, to receive the minimum depth desired, viz., eighteen inches. In a few spots some of this added top soil is fairly black, but in all cases it is friable and light and yet it does not have that lightness which is a characteristic of peat or black muck when they become dry. It all came from a piece of land which at one time was in vegetable crops of various kinds and therefore manured, in times past at least, but which of late years has been in hay and contained more or less root fibre or humus. The plants seem to be doing equally well in the brown and black loam. Other than as just stated there is no manure in the soil. It may be said in passing, however, that manure judiciously applied is of benefit to mountain laurel.

This plantation stands on ground sloping gently to the north with a rather thin backing of white pines, red spruces and a few other kinds of trees to the south of them. On the north side it is pretty well exposed, standing as it does on the edge of an open mowing field. In view of this fact, and that this part of Maine is visited in winter by truly terrific winds of frequent occurrence and long duration, it has been thought best and perhaps necessary, to give the plants late in the fall a dense evergreen protection, which in this case consists of boughs of the red spruce, a native tree of great abundance in this section of the country. It is intended by experiment to determine how much if any of this winter protection can be dispensed with to see if mountain laurel in this region is in the "iron-clad" class, although it is not improbable that protection may be a necessity on account of the severity

of the climate, and notwithstanding that mountain laurel is a native occurring sparingly not far away and further inland. That protection in any case is beneficial was very apparent this spring when it was removed, as the plants had passed through the winter unusually well, better than they usually do in favored locations; that is, they looked just the same as though they had been carefully stored in a cellar.

The plantation is of rather moderate size, a little over one hundred plants, not all of which are comprised in the illustration. The loss so far is probably less than ten per cent. However, mountain laurel when transplanted not infrequently has a manner of melting away, as it were, apparently without cause, so it may be a little soon to feel sure of what the permanent result will be. This trouble is often brought about by errors in the choice of site for and preparation of the area in which they are planted, and by errors in their maintenance and manipulation, such as too much and deep cultivation, raking away the leaves from among the plants, etc. This plantation so far has not been subjected to any of the above faults and will probably have the best of care in all ways, so that permanently successful results may be hoped for.

H. J. KOEHLER.

## THE GLASS SITUATION.

Owing to the unsettled conditions throughout the country only a small proportion of the manufacturers of window glass were in operation up to July, and by July 1 practically all of the hand-blown plants closed down for the summer. While the demand for window and greenhouse glass has been less than normal, the supply also has been much less, so that the manufacturers find themselves with unusually small and broken up stocks and there appears to be a great scarcity throughout the country of glass in the better qualities.

This applies equally to greenhouse glass, and as no more glass can be made and put upon the market before at least the early part of October, much higher prices are liable to prevail for glass from present stocks.

## ROSES IN COLORADO.

A paper by J. A. Valentine of Denver, Colo., before the American Rose Society.

The State of Colorado, situated a little to the west of the geographical center of the United States, is about 375 miles long from east to west, about 275 miles wide, and has a total population of about 650,000. Denver, the principal city and capital of Colorado, with a population of about 200,000, is situated a little to the east and north of the center of the State. In traveling from Chicago to Denver, your journey would be a little longer than from Chicago to New York.

In going west from here by rail, you reach the Missouri River at Omaha in about five hundred miles. From there for more than five hundred miles you cross an immense plain, with an average rise of about seven feet to the mile, so that by the time you reach Denver you will be a mile above sea level.

## Topography of Colorado.

You will have traversed the State of Nebraska from east to west, and a large part of the State is now fertile and has productive farms, although within the memory of some of those here today it was a portion of the Great American desert, and considered sterile and unproductive. My own personal knowledge of this region only extends back about twenty-five years, but I can very well remember when the meridian of 100 degrees was spoken of as a dead line, beyond which it was absolutely impossible to conduct any farming enterprise without irrigation. Today the situation is so far changed that a great many people are contending that profitable farming without irrigation is possible even as far west as Denver, and, more than that, they are showing a good many substantial results to justify the faith within them.

The eastern half of Colorado is part of the immense plain already mentioned, and the western half is mountainous. The main range of the Rockies lies directly west of Denver, with the crest of the range only about fifty miles away, with numerous peaks reaching an elevation of 14,000 feet, and the gaps or passes ranging from ten to twelve thousand feet. Westward from here the whole State is mountainous, with many fertile valleys between the ranges, some of them narrow and some of them wide; but from the eastern to the western boundary of the State the whole region is arid, with a very light rainfall, which averages about 14 inches per annum in the vicinity of Denver; and farming by ordinary methods is not possible without irrigation. Evaporation is at all times very rapid, and dews almost unknown.

Recently a great many experiments have been conducted under what is known as the "Campbell System," which briefly means intensive cultivation and a retention of the moisture in the soil by continually keeping the surface in a pulverized condition, and thereby preventing evaporation. It is

too early to speak with entire confidence as to results, though success has been achieved in many cases, and the striking results obtained may well carry a lesson for florists whose carnations are suffering from drought in the field.

#### Soil and Temperature.

The whole State is blessed with abundant sunshine both in summer and in winter and, except in the mountainous portions, the winter climate is mild with but little snow. There is a wide daily range of temperature, nights being cool in summer and cold in winter. There is also a great difference between the temperature in the sun and in the shade, largely due to the absence of moisture in the atmosphere. Naturally in a climate so widely different from the climate of the eastern states, problems arise peculiar to this locality.

In any arid region the vegetation is scanty, and this same condition has existed back during the countless years in which the surface soil was being formed. Consequently the soil contains very little fibre and very little decayed vegetable matter, but the soluble salts are apt to be present in large quantities, because there has been little water to dissolve them and wash them away. Some of these salts are beneficial and some of them are harmful. In many localities alkaline salts are present in such quantities as to make the soil utterly useless, and the water of the streams naturally partakes of the chemical qualities of the soil so that in a great many cases the water is so badly impregnated as to be utterly unfit for use. Many florists in the arid region have failed because they neglected to investigate the quality of their water supply before deciding upon a location.

It is generally possible to find soil which will produce good roses in the field, but it is difficult to find it heavy enough to be satisfactory and at the same time porous enough to permit of heavy watering in the benches. Our heaviest soil, called adobe, formed from decomposed shale, is certain to contain alkali, and cracks very badly when dry; but by a careful selection of soil most growers are meeting with fairly satisfactory results, although there is still much to be desired and the ideal soil has not yet been obtained.

#### Manipulating the Soil.

It is not an expensive or a difficult matter to secure a determination of the soluble salts in a sample of water, and the Agricultural Department will furnish valuable advice in such cases if requested. When it comes to an analysis of the soil, the situation is very different, for then the problem becomes very complex, and what with soluble and insoluble food, moisture content mechanical condition, and nitrifying and denitrifying bacteria in numerous varieties, the layman searching for information becomes confused and is quite ready to agree with a recently published statement of Prof. Corbett to the effect that the plant itself must tell you by its action whether the soil is suitable. Yet even the soil sharps quarrel among themselves, and many of them claim that soil analysis is a safe guide. Your Illinois Experi-

ment Station seems to be among the latter, and more than that, they support their claim by results which lead us to hope that the present confusion will some day crystalize into tested and accepted methods whereby the man in the laboratory may give wise counsel to both the man with the hoe and the one with the hose.

Owing to the exceedingly dry atmosphere and the light rainfall, it is very difficult to get good results from the composting of soil in Colorado. If sod is piled up it does not rot but dries out. If manure is mixed with the soil its chemical condition remains unaltered for a long time. Some of our rose growers have on that account absolutely abandoned the use of manure in soil put into the benches, and all growers use it with great caution. When used as a top dressing it should be mixed with about an equal quantity of soil. It is safe to say that if a rose grower in Denver were to top-dress his benches with such quantities of green manure as is used in the vicinity of Chicago, he would hardly have a leaf left on any of his plants at the end of a week. We Denver growers are simply amazed at the impunity with which manure is used in this vicinity.

#### Some Ever Present Evils.

Among the ordinary evils which rose growers have to contend with there are none of them which we do not have. The dry air seems to suit the red spider to perfection, but with our continual sunshine we are able to syringe the roses freely without any bad effect. Blackspot attacks the Beauties and Hybrid Teas to some extent, but is not nearly the scourge that it is in the east. Thrips are like the poor, and are always with us, though I cannot vouch for as many varieties as your Illinois Experiment Station claims; and the greenfly propagates as freely with us as elsewhere, but is eradicated long before we get rid of the thrips. Mildew has been quite a problem with us in August and September. In the summer time our houses not infrequently show a temperature of 110 degrees when they are not shaded, although it is very rare indeed that the weather bureau reports any temperature above 95 degrees, and some of our September days are nearly as hot as midsummer. We frequently get a night temperature in June, July and August of 45 degrees, with 6 or 7 degrees lower than that on rare occasions, and we expect a severe frost about the middle of September. At the place where I have charge, we keep steam in the boilers all through the summer, believing that it pays to do this as a protection against mildew; and yet, last summer we had a great deal of mildew, while one of our neighbors did not fire at all and his stock was perfectly clean. Owing to the dry air one would naturally expect us to be free from this trouble, and I am not competent to say why we are not.

#### Own-Root and Grafted Roses.

A number of years ago our tea roses were not producing well, and were not making a good growth. Investigation disclosed the presence of immense number of eel worms. Our dry climate and our mild winters seem to be just suited to the production of nematodes

in the open ground. After a very thorough comparative test, we abandoned the growing of tea roses on their own roots, and have now for a number of years grown them only on Manetti. For a considerable time we sterilized the soil that we put in the benches, but this process has been abandoned as the Manetti stocks have seemed to be perfectly immune. I believe that a large proportion of the tea roses grown in Colorado are now grown on Manetti stocks.

The growing of American Beauties on Manetti has been quite extensively tried, but the results have not seemed to be decisive either for or against this method, and the gain, if any, was so slight that all Beauties are now grown on their own roots.

So far as I know, none of our native roses have ever been used as stocks upon which to graft or bud roses for forcing or garden use, and I presume the probabilities are against securing any good results, but the experiment ought to be worth trying. We have one or two native roses that are quite vigorous in their growth, and they are doubtless resistant to the evil effects of the alkaline salts so generally prevalent in the soil. Probably nothing but an actual test could determine how well they would respond to winter forcing, though the chances are that they would prove rebellious.

Dormant roses of all kinds are hard for us to handle. They are slow in making roots, and it requires careful handling to keep the wood from shriveling. Such roses as the Crimson Rambler are always in evidence in the stores at Easter time, but plants that are really well done are always scarce, and no grower can be absolutely certain of his results.

#### Roses in the Garden.

Our people as a rule are but just beginning to show a proper appreciation of garden roses and shrubbery, and within the last few years business in these lines has largely increased.

Owing to the peculiar climatic conditions already outlined, the growing of roses in the garden always presents a great many problems, and it is a difficult matter to get the average householder to understand just what is required in the way of care, so that repeated failures have discouraged a great many. Dormant roses shipped in from the east generally arrived with the roots badly dried, and a large percentage of them die. Reputable concerns should, for their own sakes, use more care in packing shipments for the arid states so as to prevent this drying out. Shipments are also made by the itinerant peddlers, who care nothing for the interests of their customers, and the buyer is not entitled to much sympathy when he finds his investment a total loss. But such transactions are an injury to the business, for a man is loth to try again if his first purchase proves a failure.

#### Winter Severity.

Roses which are hardy in regions where the temperature goes very much lower than it does in Denver, often winter-kill with us, but it is not the severe cold which kills them. A plant suffering from drought will not endure the same degree of cold that it would

if the soil were in a reasonably moist condition. Since the first of November we have had a total rainfall of less than 1 1-2 inches up to the 15th of March, and during that time we have only had three storms where the precipitation was one-quarter inch. Then again we have had a great many warm winter days, and especially warm days in February, March and April, which makes the buds swell, only to be severely frozen later on.

During this same period the nights are generally about 25 degrees colder than the days but this difference sometimes reaches to more than 50 degrees, and on rare occasions to nearly 60 degrees. It is obvious that a day temperature of 70 degrees, followed by a night temperature of 20 degrees in April, is more than any rose plant can well withstand.

The drying winds and the bright sunshine also work a great deal of harm, and with us it is more essential to provide protection from the sun than it is from the cold. We find that plants on the north side of a tight board fence generally come through the winter in pretty good shape, while those on the north side of the same fence are very apt to die. Tea roses do not seem to have vitality enough to withstand our winters even when protected, but the hybrid teas do very nicely and are planted quite largely. Climbing roses are apt to have the wood badly killed back unless they are in a position where they are sheltered from the sun.

Owing to our dry winters, few hardy roses are planted in the fall, and spring planting of field-grown stock often meets with failure unless the planting is done very early. In our establishment we have advocated the planting of young roses from four-inch pots in preference to field-grown stock, the results being much more satisfactory. By fall these roses are vigorous bushes and in good condition to endure the hardships of the winter. Roses on their own roots are much to be preferred to budded stock for the garden, because if the tops are badly killed back they are likely to make good growth again from the bottom.

#### Colorado's Florists Are Intelligent and Progressive.

I find that in many quarters the idea prevails that an apprentice who has served a year or two in the east can come to Colorado and rank as a first class florist. In other words, it is thought that our methods are crude, our growers ignorant and unskillful, and our structures of an obsolete type. We are apt to be a little resentful of such an assumption, for it is erroneous and while I do not wish to appear boastful, it is due the florists of our section to say that they are an intelligent lot of men, whose character and methods will not suffer by comparison with the florists of any other section. While our houses are not as expensive or as extensive as some in other parts of the country, they are in the main well suited to the purposes for which they are intended. Our rose growers do not cut a large number of flowers on extra long stems that would grade as "specials" in this market, because our market does not demand much stock

of that grade, and also because our climate tends to produce a more slender growth and a more early setting of the buds; but the stock averages well, is well colored unless faded by too much sun, and would sell well on any market.

#### Advice to the New-Comer.

Nothing which I have said should be construed as intimating that the problems with which we contend are more difficult than those encountered in the eastern states, but they are different. Our ranks are constantly being augmented by accessions from the east, and any florist who has succeeded there may confidently expect to succeed anywhere; but he will make a great mistake if he allows his previous success to blind him to the fact that a strange country means strange conditions, and that those who have gone before him are in all probability able to aid him by a recital of their own mistakes. Whether they will aid will depend largely upon his own attitude.

The people of the west speak of a new-comer as a "tenderfoot," and until he has become acclimated he will find it politic to assume a meek and lowly demeanor. If he does he will receive a cordial welcome and find his fellow florists a lot of good fellows; but if he begins by commenting adversely on what he sees, and sins still further by predicting the things he proposes to accomplish, he cannot wonder if the natives stand back and prepare to laugh, when he proves the truth of the adage that "Pride goeth before a fall."

Most rose growers who come to our climate from the east come with a feeling that the dry air and continual sunshine are all that they need to insure success, and there is no disguising the fact that we are free from troubles that are so serious a matter to our eastern brethren during the dark days of winter; but dry air and sunshine are not the only essentials. The regions where vegetation grows luxuriantly are regions that have a humid atmosphere and the cloudy days which necessarily come with such an atmosphere. Many a rose grower has come to Colorado, and scorning advice has attempted to dry off his roses in the summer for the purpose of starting them up later, as he had been accustomed to do. The drying is easy but the subsequent starting is a problem. We frequently carry over roses to the second and even the third year, but we do not attempt to stop them, and we keep them practically in full growth, even if we propose to transfer the bushes from one house to another.

#### CHICAGO PERSONALS.

William Lynch, of Hunt's, leaves on Saturday for Niagara Falls to place the firm's convention exhibit at the Winhold watering device. To the cement benches etc. Among the vacationists Miss Mammie Corbett of Russell & Washburn's, is in Wisconsin. John Horstman, of the same firm, is taking an outing. Miss Josephine Tiedt of the Flower Growers Market goes to Michigan.

#### NEWS NOTES.

The Thompson Carnation Co., Joliet, Ill., lost one of their greenhouses by fire on August 3.

A card from A. Leuthy of Reshtdale, Mass., announces his safe arrival in Grand Belgium.

Hans J. Koehler will go to Seattle Wash. at the end of August to superintend the planting of the grounds for the Alaska-Yukon-Pacific Exposition for Gimsted Bros.

H. S. DeForest, of the Pierson C. Co., New York, has just returned from a successful western trip.

John H. Taylor, Bayside, N. Y., had a loss of about \$1000 on chimney and glass in the severe thunderstorm on August 7.

C. B. Knickman of McHutchison & Co., New York, sails for Europe on August 13, on a business trip. England, Holland, Belgium, Germany, France and Switzerland will be visited. He will be accompanied by Orlando Harrison of Berlin, Md., ex-president of the National Association of Nurserymen.

S. F. McGrew has been appointed receiver for the Fairview Floral Co. of Springfield, O., with assets at \$23,600 and liabilities \$13,350, on the petition of Dr. C. S. Kay and M. S. Kirkpatrick, two of the heaviest stockholders. The business will be continued for the present. The plaintiffs took this step to protect themselves against personal notes issued for the company.

What appears to be one of the most acceptable devices ever offered for the convenience and economy of the greenhouse man is the Castle pipe coupling advertised in another page of this paper. It is ingenious and simple, requiring no mechanical skill, threading or other expensive delay and can be applied directly to boiler tubes, being particularly useful in a sudden emergency. It is worth investigating.

Beauty Grower

DALE ESTATE, Brampton, Canada

## OBITUARY.

## Warren W. Rawson.

W. W. Rawson, known all over the country as an enterprising and prosperous market gardener, died at his home in Arlington, Mass., on Sunday, Aug. 9. He was taken suddenly ill on Friday of the previous week and underwent an operation for appendicitis, from which he did not recover.

Mr. Rawson was born in Arlington, Mass., Jan. 23, 1847. At the age of 20 he entered market gardening with his father, and five years later bought out his father's interest, from which time he rapidly forged ahead until he stood in the front rank as an operator and as an expert in all branches of market gardening, particularly under glass, his interests in this line being very extensive. He was always ready to experiment on any line that suggested improvement, and among other things attained wide prominence by

WARREN W. RAWSON

his investigations of the effect of electricity on the development of produce. In 1884 he acquired the seed business of Everett & Gleason in Boston and at the time of his death was still conducting it in partnership with his son, Herbert W., under the name of W. W. Rawson & Co. He was a very active man and was identified with many organizations, business, social, political and fraternal, including the G. A. R. In 1887 he organized the Boston Market Gardeners' Association and was its president continuously from that time until his death. He was a vice-president of the Massachusetts Horticultural Society. He held many public offices from time to time, and in 1905-06 was a member of the governor's council. The funeral services on Aug. 12 were conducted by Cambridge Commandery, Knights Templar.

## George Cooke.

George Cooke who was killed on August 6th by a runaway accident in California near San Diego was a notable character and horticulturist and landscape gardening suffered a great loss at his death.

He was born in England near Leices-

ter and remained always a typical Englishman both in physical appearance and mental and moral characteristics.

His training and experience were naturally largely English and he held in the course of his life several important positions of trust in England the duties of which were more those of a steward than of a gardener.

He early acquired a wide technical knowledge that enabled him to both grow orchids and take charge of a large farm and breed cattle and sheep as he did in fact on one of the largest estates in England.

In engineering, especially in the construction of roads, drainage and irrigation his ideas were original and valuable, but it was as a landscape gardener that he especially excelled. He was a good plantsman, there are few better, he knew the names of the plants and more than that he knew how to plant them from an orchard to a shade tree. But he was not only a horticulturist, he had attained a broad and genuine grasp of the fundamental principles of landscape gardening. A true artist in his own way, he was always original and remarkably free from bias produced by early training or conventional models. All country places were parks to him to be designed on the same natural lines, and he was always looking out for bits of scenery by the roadside which would give suggestions for the plans on which he was engaged. In other words his habit was to look at designing work with the eye of a painter and as an illustration of this trait it is interesting to remember that he always loved painting and never missed a chance if he could help it of seeing a good picture. He spoke frequently with pride of a Constable he was able to pick up at a moderate price.

During his more expansive moods, after a good dinner following a hard day's work it was a pleasure and a valuable experience to listen to his critical remarks on the various parks and country places he had studied both in this country and England. The one dominant characteristic of his mind, however, was thoroughness—attention to detail was a ruling passion with him. He wore himself out endeavoring to secure the utmost perfection in the execution of his plans. Rather than have the least imperfection develop he would undertake a vast amount of actual work with his own hands. In spring he would be abroad from six in the morning to eight at night setting out trees and shrubs himself and he certainly had a genius or knack for planting them I have hardly ever seen equalled. Pursuing the same thorough method he probably did as much as any man of his time to elevate the standard of excellence of trees and shrubs purchased from nurseries, as I think many nurserymen in both England and America would readily testify. He would hunt for hours through a square of thousands of trees and perhaps find fifty to suit him.

George Cooke was moreover a generous man as many a gardener in hard luck has found out. But he was extremely forgetful, blunt, and laconic in speech which prevented many from

realizing this kindly side of his nature. It was a pity that he did not move about more among men, but he was simply devoted heart and soul to his work and it cannot be denied that in this way, his social and domestic relations suffered.

He leaves a serious gap in his profession on account of his strong, honest, original character and on account of his independence in thought and diligence in endeavor.

SAMUEL PARSONS.

## Louis H. Sander.

We learn with sorrow of the death, after fourteen months of suffering patiently borne, of Louis H. Sander who has been associated for the past twelve years with Jackson Dawson in the outdoor work at the Arnold Arboretum, under Professor Sargent.

Mr. Sander was born June 30, 1856, and came from Germany to America in 1882. He worked as a farmer at

LOUIS H. SANDER

Falmouth, Mass., until 1895 when he went to the Arboretum. Early in the summer of 1907 Mr. Sander underwent an operation for appendicitis and since that time has been an invalid. He died on August 11 at his home in Centre street, Jamaica Plain, Mass. The burial was at Walnut Hill Cemetery, Brookline.

Mr. Sander was a superior man, intelligent, industrious and very highly esteemed. His work at the Arboretum gave the greatest satisfaction. He was for some years a member of the Gardeners' and Florists' Club of Boston. He is survived by a widow and three daughters. His brother, Charles Sander, gardener for many years at the estate of Prof. Chas. S. Sargent, Brookline, Mass., is well known.

## Christian Rieger.

Christian Rieger, of Pittsburg, a wire design manufacturer of long standing, died on August 2, at the age of 66. He was a member of the S. A. F., and was a familiar figure at their conventions. His son, Harry, was connected in business with him, and will continue same.

## A FINE MELON CROP.

The garden committee of the Massachusetts Horticultural Society on August 7 visited the H. H. Rogers estate at Fairhaven. After inspecting the new park which Mr. Rogers has at enormous expense transformed from mud and marsh into a beauty spot of about ten acres in extent and is presenting to the town, under the guidance of James Garthly, they visited the melon patch, 66x78, upon which were growing (roughly counted) 1000 muskmelons, Honeydrop, Montreal and another kind sent for trial. One melon of the unnamed variety tipped the scales at 133.4 pounds. The crop was well worth a journey to see. Plants the picture of luxuriance, melons about as thick as they could find room to grow and, as experience afterwards proved, of flavor equal to appearance.

Mr. Garthly has grown melons upon the same patch of ground for six years and considers that the main secret of success and freedom from blight lies in early planting and good cultivation. The seeds were sown on May 12 in the place where they were to grow. A hand light was kept over them closed, until the formation of the second or third leaf when air was admitted judiciously and the light removed as weather conditions permitted.

The committee then adjourned to Fort Phoenix where they enjoyed a Fairhaven clam bake and verified Mr. Garthly's statements concerning the quality of his melons.

THOMAS WHITE.

## A New Firm.

Our advertising columns tell of the advent of a new firm which is undoubtedly destined to take a prominent part in the trade activities of the future. Messrs. Skidelsky and Irwin, who compose the firm, are both well known. Probably no one has a larger acquaintance with the trade from one end of the country to the other than Mr. Skidelsky. We wish the new house the abundant prosperity which they merit and will undoubtedly get.

## THE LIBRARIES OF LONDON.

A very neatly clothbound, well printed handbook has just been published at the trifling charge of sixpence by the University of London, Eng., bearing the above title. It contains a list and details of all the libraries in London from the great national collection in the British Museum down to some of the small libraries of the special societies devoted to the various arts and sciences. The name of the library, address, number of volumes, and notes concerning the subjects and sometimes the origin of the libraries are given. A remarkably interesting and useful guide for foreign students in our great Metropolis. The Lindley Library of Horticulture and the Kew Gardens Library of course are included.

## HORTICULTURE PUB. CO.,

Please discontinue carnation ad. All sold out.

HARLOWARDEN GREENHOUSES.  
Greenport, N. Y., Aug. 10, 1908.

## TWO GENTLEMEN OF PHILADELPHIA.

CHAS. E. MEEHAN, Vice-Pres.

E. J. FANCOURT, Secretary.

Last year we presented the portraits of two members of the Pennock-Meehan establishment in Philadelphia and it is now our pleasure to introduce two more who, however, hardly require an introduction, Mr. Fancourt particu-

larly, being known wherever an intrepid traveling representative has ever succeeded in penetrating. Mr. Fancourt is manager of the ribbon department of the Pennock-Meehan Co. and will have something lovely to show at Niagara Falls.

## When Passing through Philadelphia

Come to West Grove, Pa.—the home of the Rose. Our place will prove interesting with its seventy greenhouses of Roses, Chrysanthemums, Geraniums and a varied assortment of miscellaneous plants including a grand collection of Rex Begonias and Ferns. We have twenty acres of outside stuff—flowering and ornamental shrubs of many kinds, Cannas, Dahlias, Roses, Carnations, etc. All are cordially invited to pay us a visit. Trains leave Broad St. Station Pennsylvania R. R. Baltimore Cent. Div. of P. B. & W.R.R.

#### BEDDING PLANTS.

A paper read by Louis Boeglin before the Twin City Florists' and Gardeners' Club.

In a paper on "Bedding Plants, their Propagation and Preparatory Culture," before the Twin City Florists' and Gardeners' Club, Louis Boeglin named as among the best cannas for large beds, the tall growing varieties Alphonse Bouvier, Duke of Marlborough, Flamingo, J. D. Eisele, Chas. Henderson, Florence Vaughan and Paul Marquant. For smaller beds the low growing varieties, such as Express, Egandale, Premier, Queen Charlotte, etc. In bedding geraniums, he places S. A. Nutt, Mrs. E. G. Hill, Miss Perkins, Beaute Poitevine, Gen. Grant, A. Ricard, Warrior, Buchner, Madame Bruant and Jean Viaud among the first.

#### Flowering Plants of the Best Sorts.

He said that begonias should be grown more than they are today, and most of them will stand the sun well if properly treated while growing. He named as the best tuberous begonias Duke of Zeppelin and Latayette, both having the flowers well above the dark foliage and being continuously in bloom, and as the best fibrous or semperflorens type Vernon, Erfordt pink and red, gracilis and gracilis luminosa, Triumph de Lorraine, Bijon, Bedding King and Dewdrop, all of which varieties are perfectly sunproof.

The best salvia is splendens compacta Zurich, a variety introduced by W. Rothpletz, superintendent of parks, Zurich, Switzerland, and first imported here a few years ago by Theodore Wirth. The best heliotrope is the

Czar, a healthy, strong-growing variety with good foliage and solid dark flower-spikes. The best impatiens is Sultani Holstii with bright red flowers and fine foliage. Of ageratums Stella Gurney is the best, a healthy dwarf grower and free bloomer. In verbenas we have venosa, Aubletia compacta and erecta purpurea. Verbena venosa is a most charming bedding plant with dark foliage and a mass of purple flowers. Verbena Aubletia compacta, a last year's novelty, is considered one of the best introductions by the leading florists of France, Germany and Switzerland. It is of the venosa type, the flowers being larger and more reddish. Verbena erecta purpurea is also a good addition to our bedding verbenas. The plant is dwarf, robust, upright growing; the flowers dark purple and it is a first-class bedder. Verbena erinoides, with its trailing habit and pure white flower, is useful to plant boxes and vases.

#### Dwarf Foliage Plants.

In dwarf foliage plants the best bedders in coleuses are Verschaffeltii, Golden Bedder, Firebrand and Firefly. In iresines we have Vallisi, Bienmulleri, and in achyranthes, formosa, Lindenii, reticulata and aurea reticulata. In centaureas candelissima, gymnocarpa and maritima. In pythrums, parthenitolia, selaginoides and excelsa. In santolina, tomentosa and incana. In gnaphalium, lanatum major and lanatum minor. In artemisia, stelleriana and arborescens. In abutilon, Savitzii, etc. The most popular alternantheras are, paronychioides major, aurea major, aurea minor, spectabilis, versicolor, sessilis and rosea

nana compacta. In echeverias, secunda, secunda glauca, desmetiana and metallica. In sempervivums, cornutum, Smithii and testatum. In sedums, lydium aureum, acre elegans and carneum variegatum.

#### Plants for Subtropical Effect.

For tropical and subtropical effects, Mr. Boeglin mentioned ricinus, Musa ensete and Martini; in nicotiana, macrophylla, N. glauca and N. collosina variegata; solanums, robustum, atropurpureum and nigrum. Especially desirable, and Solanum, resembles as a climber, very effective with its pure fine flowers and fern-like foliage, which, if planted near tall plants, will climb over them and produce a charming wild appearance. Also palms, caladiums, eucalyptus, tall growing abutilons, acalyphas and crotons and the ornamental grasses such as arundos, eulalias, erianthus, gyneriums, zeas, bambusas and pennisetums.

#### Starting Cannas.

He then gave careful cultural directions on the various classes of plants from which we extract the following: "Canna roots before starting them in sand should be properly cleaned for very seldom you have perfectly sound roots. If they are black spotted, cut all dead and black spotted parts off and keep them growing as fast as possible to give the black spots no time to gain. When 4 to 5 inch long they should be potted in 4-inch pots in good, rich soil. Cannas are great feeders; the better the soil, the better the result.

#### Begonias from Seed.

"To raise begonias by seed, the seed should be sown the last part of January. In preparing the boxes for this purpose, put on the bottom about two inches of moss, on top of the moss about one inch of fine sifted soil with one part of sand and two parts of leaf mould, give the boxes a perfect soaking before seeding to avoid sprinkling, which the young plants can't stand. If properly soaked the moss on the bottom will retain enough moisture to supply the young plants till they are fit to be transplanted. Begonia seeds should never be covered with soil or sand. The seed boxes should be covered with glass and the glass cleared each morning until the plants are strong enough to do without. If treated this way the seed will be up in ten days and in another two weeks the plants are ready to be transplanted. Prepare the boxes the same way, transplant the young plants carefully, cover with glass for about two weeks and your plants will be strong enough to stand a good watering. Three weeks more and the plants are fit to be potted.

#### Begonias from Cuttings.

"To grow begonias from cuttings, we must have before all, good 'mother-stock.' The best for this purpose are old plants potted in the fall. Cut them back to one or two inches from the pot, keep them growing in a warm place so they will make nice shoots from the bottom and you will have good cuttings, which is the foundation of success in growing begonias. It is absolutely useless to try to grow begonias without having the right kind of cuttings. Top or head cuttings will never break out but will be growing to a single stem and never amount to

The home of Michell, for almost a quarter of a century, has stood for progressiveness and success.

To compare, to-day, as fine a building as will be found anywhere devoted to the

## Seed, Bulb and Horticultural

industry, and is on the eve of making a move to occupy more pretentious quarters, having purchased the large, five-story building known as "TOWER HALL," 518 Market Street, which in time will be occupied by them, the floor area of this building being about 39,000 square feet.

From a modest beginning it now ranks as one of the foremost Seed and Bulb Houses in America.

HENRY F. MICHELL, Pres. t. FRED K. J. MICHELL, V.-Pres. t.

anything. All begonia cuttings should have at least one eye to produce stocky plants. Begonias like a loose, light soil, not too rich.

#### Mother-Stock.

"As to foliage and border plants, keep in mind to bring a few in from each kind before they are frost bitten in the fall, pot them properly, cut them back, treat them right and you will have cuttings by the bushel. Cuttings made the beginning of September of coleus, ageratum, salvia, gnaphalium and cuphea will grow to fairly good mother-plants through the winter. The best mother-stock in alternanthera are cuttings made in September right in boxes in ordinary sandy soil. A common box 20 inches long, 12 inches wide and 3 inches deep will hold about 100 cuttings. Stick the cuttings deep, give them a good place near the glass, treat them properly and you will have healthy cuttings in quantity. To have good plants of acalyphas and abutilons, cuttings have to be made in the fall. Plants from spring-cuttings are not large enough for effective bedding. Seeds of tropical plants must be sown the last part of February in a very hot place. Once transplanted you have to keep them growing without rest to have the best results.

#### Cultural Methods.

Don't shade your stock too much; give rather more air, for sun and air produce sturdy stock. Frames with fresh transplanted stock ought to be closed and shaded for a short time, shaded only from nine o'clock in the morning till three o'clock in the afternoon. Morning and evening sun will never hurt plants but will be very profitable to them.

"Beginning the last part of April we have still time to grow a lot of bedding stock which will be large enough at planting time. Coleus, ageratum and alternantheras can still

be grown successfully. If you have warm frames, put about one inch of soil on top of the manure, place your empty pots nicely, fill the pots with sandy soil, pack a little and give them a perfect soaking. Then stick your cuttings in the pots, in just the same way that you transplant seedlings, then keep the sash closed until they are rooted, which requires about one week. By this method you save time and labor and the work is done just as well as if the plants were potted on the table. You have to watch the stock closer in hotbeds than you do in greenhouses. Sometimes the bed turns too hot and in this case we must give plenty of air; don't be afraid to let in a little air over night. If a bed turns cold, renew the manure in the walks, it helps a great deal in such cases. The bed has to be covered before the sun sets. Covering and uncovering is about the only additional work we have in order to grow plants in hotbeds, but plants grown the right way in frames are bedding plants to perfection. This little additional work does not scare a good gardener, for we all know the truth of the old saying, No award without pain, no harvest without sowing."

#### MOVEMENTS OF GARDENERS.

Augustus Zirngiebel of Needham, Mass., has taken a position as superintendent of the estate of Bronson Winthrop at East Norwich, N. Y.

Charles McCauley of Washington, D. C., has taken a position as manager with Geo. R. Fabyan, Geneva, Ill. Mr. McCauley has been secretary of the Florists' Club of Washington for the past three years, and at their August meeting where his resignation was offered, he was presented with a silver loving cup. Mr. W. F. Gude, the host on this occasion, made the presentation speech.

### SWEET PEA REVIEW FOR 1908.

At Fordhook the sweet peas in common with the other vegetable and flower trials have suffered from the drought, but the showers of July 4th and later made the vines jump and at the time of inspection, the trials look very much better than we expected to find them and we must pause to remark that it is a magnificent sight to look over this piece of something more than two acres in which have been planted 547 samples—323 grandiflora and older types; 9 of the so-called doubles; 142 novelties sent out in 1903 or to be introduced in 1909; 16 lutea and 28 cupid varieties.

The Re-Selected Earliest of All and Earliest White are now podding—showing that they came into bloom very early notwithstanding the poor season. Earliest White has for several seasons proved to be the earliest variety planted at Fordhook. Dorothy Eckford is still to the fore in the grandiflora whites while Shasta with its fluted petals is of value to florists as is also White Wonder owing to its tendency to produce sprays of from five to eight flowers and some of these occasionally doubling in the standard. In the Primrose class of grandiflora The Hon. Mrs. E. Kenyon still holds her own. While Mrs. Collier (practically a Primrose Dorothy Eckford) may be of better substance, yet the color does not seem quite so deep.

In light pinks, Modesty, Lovely, and Katherine Tracy still show up well. Eckford's Agnes Johnston is a beauty. Janet Scott is still the best of her class while old Prince Donna will ap-

pear to those desirous of obtaining a lighter shade. Among the scarlets and reds who would ever have expected in sweet peas such glorious coloring as is found in King Edward VII and Queen Alexandra? For brightness we prefer Queen Alexandra, but for form think King Edward VII is the better.

In the darker colors there has been added this year Midnight, a sport from David R. Williamson, so dark a purple and with standard and wings so nearly alike in color as to give the flower quite a black appearance. In the striped and mottled class Helen Pierce, which has a white ground mottled and flaked with a bluish lavender, now holds first place. In the lavender or mauve class we note that Flora Norton and Miss H. C. Philbrick are identical.

Navy Blue, for some years considered the best of the blue or purple varieties, will now be superseded by Brilliant Blue, a variety identical with Lord Nelson, recently introduced in England. In the orange and salmon class, Henry Eckford requires to be shaded during the blooming period to bring out the color and prevent burning and for this reason will never become as popular as some other varieties. Earl Cromer, one of Eckford's recent introductions, is a peculiar shade of magenta and burns a disagreeable color in our climate.

As to the Spencer and Unwin types it is now generally conceded that the Spencer class produces flowers that are larger in size and more decidedly crinkled or waved in the wings. Seed of Countess Spencer the first of this race, found its way to America about 1903 and owing to its open keel it was

difficult to fix the variety true to color. Perhaps if it had not been for this open keel it would have been some time before we were able to obtain the different colors now offered in this new type. The Unwin type originated a few years after the Spencer.

Apple Blossom, the White and the Primrose Spencers, Burpee introductions in 1908, have bloomed well, but unfortunately are not yet thoroughly fixed as to type although the flowers that fail to show the crinkled effect are of fine substance and tremendous size. Countess Spencer is a soft rosy pink, while Florence Morse Spencer, is best described as a lighter pink-edged Countess Spencer. John Ingman is rosy crimson but will eventually have to give way to George Herbert, a bright rosy carmine. Paradise is too near Countess Spencer to be considered a separate variety. The Marquis is of a rosy heliotrope color but not so large as some of the other Spencers. Princess Victoria is somewhat similar to Florence Morse Spencer and does not seem to be wanted. Menie Christie has flowers that show the fluted effect and is very similar in color to the old Captivation which has been described as a deep magenta, but we think a better description is standard rosy purple with wings much more purple.

Among the new varieties which have been planted at Fordhook for the first time are:—

Aurora Spencer, much brighter and handsomer than the Grandiflora Aurora and distinctly of the Spencer type; Dorothy Tennant Spencer, a large

## New Sweet Pea --- Burpee's EARLIEST WHITE

**Burpee's Earliest White** comes into full bloom in forty-five days after the seed is planted in the open ground. The dwarf plants, sixteen to twenty inches high, are clad in rich dark-green foliage and carry a profusion of the pure white flowers borne upon strong stems six to eight inches long. Each stem has two or three of the fully expanded well-formed flowers, of good size and placed close together.

From seed planted on May 15th BURPEE'S EARLIEST WHITE was in full bloom on July 1st, while *Mon Blue*, planted the same day, was showing only a few buds. It is also wondrously profuse-flowering.

**Burpee's Earliest White** is not only as *extremely early* but also just as *hardy* as the famous pink-and-white *Burpee's Earliest of All*. It has black seed,—and is really the only clear white Sweet Pea that has! This insures a better stand, stronger and more thrifty plants.

**2956 Burpee's Earliest White** is not only the *earliest white* in the open ground but is also unequalled for forcing. The plants under glass begin to bloom freely when only twelve inches high and *continue to grow and flower profusely* until, when six or eight feet tall, they reach the top of the greenhouse; the plants can then be cut back, if desired, and will make an equally vigorous second growth. **Per pkt. 10 cts.; per oz. 20 cts.; ¼ lb. 60 cts.; per lb. \$2.00.**

**NOTE** If you have not received Burpee's Blue List for 1908 (Wholesale Price List for Market Gardeners and Florists), you should write for a copy. This catalogue, from cover to cover, is full of information of interest to all planters of seed.

## W. ATLEE BURPEE & CO. Philadelphia, Pa.

flower but not bright enough to ever become very popular; *Flora Norton Spencer*, a little smaller than the other varieties, with a little more purple in the standard than appears in the ordinary type; *Senator Spencer* for a striped variety is quite good, while *Ramona Spencer* shows up most beautifully.

Burpee & Company, if the crops now turn out as anticipated, expect to introduce to the trade—*King Edward Spencer*, the standard brighter than the older variety and the wings a shade lighter but the effect in fresh blooms is that of a self-colored scarlet. The enormous flowers are borne three or four to a spray. *Black-seeded Primrose Spencer*, as it is labeled here, will be introduced as *Queen Victoria Spencer* the intention being to hold as closely as possible to the older grandiflora names and use simply the word "Spencer" to designate the type as these newer varieties are put on the market. We cannot recollect having seen anything quite so handsome as the flowers produced by the sample bearing the name of *Buff Pink Spencer* and which at the request of the grower will be introduced under the name of *Mrs. Routzahn Spencer*. This variety has a distinctly buff or apricot ground suffused with light pink which, as the flowers mature becomes deeper at the edge of the standard and wings giving it somewhat of a picotee edge effect. Messrs. Burpee & Company also expect to introduce *Aurora Spencer* and *Othello Spencer* but not to the trade.

Of the newer *Grandiflora* types there is *Prince Olaf* in some respects

similar to *Unique*, the blue and white stripings a bit more prominent; *Miss Mille Maslin* is of the hooded grandiflora type and there are usually three flowers on quite a long stem. The color is difficult to describe, a deep rosy crimson self; an altogether peculiar and unique shade. *Herbert Smith*, a new orange-colored variety is not needed as *St. George* is vastly superior. *Sutton's Queen* is primrose edged with delicate pink, but like many other *Spencers* is of a "sportive" character. Phenomenal while not strictly new, is but little known, bears pure white flowers faintly suffused with pink and beautifully edged with purple, similar in effect to *Lottie Eckford* and *Maid of Honor* but larger and of more open form.

In the *Unwin* class there is *Gladys Unwin*, light pink; *Phyllis Unwin*, rose; *Mrs. Alfred Watkins*, deep pink; *Nora Unwin*, white; *E. J. Castle*, carmine rose; *Frank Dolby*, light lavender; all very handsome but the flowers are smaller than those of the *Spencer* type. *Etta Dyke* upon trial here seems to be quite similar to *Burpee's White Spencer* but shows quite a distinct green tinge in the bud. Purity is also similar but here is not so good.

After carefully going over these trials we are inclined to the opinion that although both the *Spencer* and *Unwin* types are not yet thoroughly fixed the percentages of the true type are such as to warrant planters generally becoming interested and to have a little patience with the growers as sooner or later the types will be fixed as firmly as are the older grandiflora

varieties. At the end of the trials we find the samples of the so-called *Double* varieties, which Burpee & Company do not offer at retail but simply carry to accommodate wholesale customers, and the *Bush* and *Cupid* varieties which, while having a place of their own, the writer thinks will never become so popular as have the *Grandiflora* and as will the *Spencer* and *Unwin* types.

In the foregoing notes I am largely indebted to *Howard M. Earl* the manager, not only for courtesies extended but for the ideas and judgments on varieties which he is always ready to give frankly and freely and no man has a wider experience in this particular line.

GEORGE C. WATSON.

### NOVELTIES IN PROSPECT.

The committee of the Massachusetts Horticultural Society and several other invited guests visited the nurseries of *R. & J. Farquhar & Co.*, at *Roslindale, Mass.*, on July 31. The principal object was to inspect the fields of new lilies now beginning to bloom from bulbs sent by *Collector Wilson* from northern China. Types of *Myriophyllum*, *Brownii* and *Henryii* are now in flower and a number of distinct species are in bud. The committee will make a later visit. The frames filled with young plants from seed sent over by *Mr. Wilson* were examined with great interest by the visitors. A general inspection of this well-appointed nursery followed and the visitors were entertained at lunch by Messrs. *Farquhar*.

# SPEAKING

THE great Darwin said that "an examination of these beautiful imagination." We might add with equal truth that the presence of its distinction and nobility and no amount of other material can do it.

## ?? ARE YOU

In every town of any importance from the Atlantic to the Pacific, the competitors for that place in the estimation of the flower buyers, the one who uses the greatest number of Orchids wins the race every time. Y.

# ORCHIDS FROM

HAVE been talking Orchids to the Florist for many years. The part of the choice orchid supply for the whole country passes through my hands. I only needed to tell them about it.

## !! NOW SEIZE YOUR

Here are some of the good things that are about to come. Phalaenopsis amabilis, Dendrobium formosum, Oncidium varicosum, as the season progresses, by others equally beautiful and useful. Well, this is also Headquarters for the highest grade Lily of the Valley.

## ROSE HYBRIDIZATION.

By Alex. Dickson.

*Continued from page 186.*

After many years of continuous experiment on various lines, we have at last been able to produce what has long been sought for, namely, a yellow Tea of good size and color with a vigor and hardiness of the Hybrid Perpetual. I refer to the rose Harry Kirk, which is now being grown by most of you, and you will shortly be able to judge whether it fulfills the promises we have made on its behalf. I think you will not be disappointed.

It is interesting to note, in relation to the La France cross, that the same inclination to sterility is apparent in the rose Augustine Guinnoisseau sport from La France. Out of hundreds of experiments we have not succeeded in getting a single seed pod from this variety.

The only other point of practical importance, which occurs to me, is the fact that in our early experiments, when we had in view the object of producing varieties which would give a greater continuity of bloom, we used in our efforts Rosa Indica, and, after a considerable amount of labor, we succeeded in impressing this much valued quality on some of its offspring which are now in commerce.

In a general way we found it very difficult, and indeed impossible to place the smallest dependence upon the presumption that Hybrid Perpetuals would impart to their offspring anything of their own color, and, in a general way

we may say that after much experience the chief varieties which we use and use with the best results for the purpose of getting blends are the Hybrid Perpetuals—Horace Vernet, Charles Lefebvre, General Jacqueminot, and also Austrian Briars, Persian Yellow and Harrisonii.

From what I have said, you will readily appreciate the fact that it would be wholly impossible, and indeed I think a waste of your time and mine, to give in detail the results of thirty years' hybridising, and I have done my best to make clear the general lines upon which our work has been conducted, from which it will be readily inferred that the element of chance must always play a prominent part, and I might aptly use the well known quotation from Pope:

"All nature is but art, unknown to thee  
All chance, direction which thou canst  
not see."

And I ask such of you as may desire to enter for yourselves upon this

interesting field of experiment, to go forward with confidence—

"Knowing that nature never did betray,  
The heart that loved her."

## NEWS NOTES.

Victor Felter has recently started in the nursery business at Cherokee, Iowa.

The Templin Co. of Calla, O., recently forced into bankruptcy, will go out of business, it is said.

M. J. Crow, has severed his connection with Stark Bros. Nurseries, Louisiana, Mo., and will start in the nursery business in California.

The orchards in Illinois are showing poor results and it is stated that not more than three per cent. of a crop of apples will be harvested.

The committee in charge of the Horticultural Congress to assemble in Council Bluffs, Ia., in December, have recommended the purchase of land and the erection of a suitable building in which to care for the exhibits.

Frank Huntsman and W. K. Partridge, who have been identified with the florist business in Cincinnati for so long, have both disposed of the retail end, and will now grow for wholesale trade only. Mr. Huntsman's place is located at Ft. Thomas, Ky. Mr. Partridge's at Lockland, O.

In the bids opened on July 31 for the construction of the city greenhouse at Sandusky, O., the Lord & Burnham Co., New York, made the lowest offer in accordance with the conditions. W. H. Lutton of Jersey City made a lower price but failed to itemize the bid as the law requires.

One of the most interesting exhibits at the S. A. F. convention for any one who conducts a greenhouse is promised by Lord & Burnham Co. While unpretentious as regards space occupied this exhibit will embrace every variety of fittings, hangers, clamps, joints, valves, headers, gutters, pipes, ventilator appliances and such material useful or indispensable in the erection, repair and maintenance of a greenhouse. The exhibit will be practically an object lesson from their recent publication, The Handy Hand Book

Julius Roehrs Co. are fitting up their plant houses with cement benches of home construction. A long line of moulds has been laid in the large shed and two crops of bench bottoms are turned out every week. Discarded screens from factories or mines are used for "reinforcing" and they serve the purpose well. Cement posts moulded around small iron pipe form the bench supports. Among the finest things to

be seen here this season is a large house completely filled with that most beautiful and serviceable of all commercial palms, Phoenix Roebeleni, in graded sizes from small to very large specimens. This palm which is unexcelled as a good keeping house plant has but one drawback, the necessity for plenty of root space which makes the pot or tub disproportionately large for the size of the plant. A house of superb new crotons is evidently in training for the National Flower Show where they are sure to make a sensation. For any one wanting a striking centre feature for a high roofed conservatory a rare opportunity is offered in a well furnished Kentia Forsteriana, 23 feet in height.

## THE POWER OF THE PRINTED WORD

Whenever I see a check with an air of distinction in the tone of the paper my confidence in the bank which stands back of such a good bit of work is augmented.

The way printed matter appeals mutely to our confidence almost tempts me to think that perhaps the real character of an enterprise reveals itself a little through its very type and paper, the symbols of its power, just as genuine money is expressive of a nation's impregnable financial force, while counterfeits excite suspicion even among the inexpert.

LINDSAY SWIFT.

## Seed Trade

The pendulum has again swung back, as affecting sweet corn and vine seeds in the West. Copious and badly needed rains have relieved the situation to a considerable extent. From what information has come to hand, it seems that corn generally has been greatly benefited by the rain to a far greater extent than vine seeds. The latter have apparently suffered irreparable damage, and while the rain arrested deterioration to a great extent, it cannot restore these crops to their former status—before the hot dry spell struck them. It will be some weeks before anything like definite information can be given about either vine seeds or corn.

Late peas were very injuriously affected by the hot spell, and as a result growers are reducing their estimate of a few weeks ago from 10 to 20 per cent. The year of grace 1908 will not go down in history as a year of bumper crops, with very few exceptions.

According to your Uncle Sam's figures the leading staples are going to be below average,—corn, wheat, oats, rye, barley, buckwheat and Irish potatoes. The latter are generally below average in size, but are very hard and firm and should prove good keepers. This applies only to early varieties, the later sorts not having yet matured. There is little likelihood of any marked improvement being made in the matter of yield by late potatoes, while a wet, cold autumn may cause an attack of rot which may prove most disastrous.

Much has been said about the importance of rogueing peas and beans, but few not actively engaged in the business of growing these crops appreciate the care, labor and expense required to remove foreign varieties or degenerate types. In conversation with a representative of the Jerome B. Rice Seed Co., some surprising facts were revealed. During the height of the rogueing season just passed, this firm employed between 400 and 500 men, which with their transportation, cost about \$800 a day. It is generally conceded that they are the largest producers of peas and beans in the world, they having planted particularly the present season upwards of 60,000 bushels of peas alone! What are known as canners' peas, meaning those varieties mainly planted by canners; this fact certainly being a marked tribute to the high quality of their products. What has been said of this firm regarding the labor and expense involved in keeping the different varieties of seed peas and beans true to type, may be said of all other producers of high grade stocks in proportion to the qualities grown.

## ARTHUR T. BODDINGTON

SEEDSMAN

342 West 14th Street - NEW YORK CITY

Hershberger Bros., of Hubbard, Ore., are erecting a building for cleaning and storing clover seed, the cultivation of clover seed having become a great industry in this section.

The packing house of the California Seed Growers' Company, at Westminster, was destroyed by fire on July 27. Loss, \$10,000; insurance, about \$2,500.

C. P. Braslan and wife, of San Jose, Calif., reached New York on July 28 from Paris.

At a meeting of the Seed and Agricultural Trade of Boston held Aug. 10 to take action on the sudden death of the Hon. W. W. Rawson, the following resolutions were adopted:

Whereas, It hath pleased God to remove from among us our fellow associate, the Hon. W. W. Rawson, while still in the midst of his usefulness; therefore,

Resolved, That we members of the Seed and Agricultural Trade of Boston deplore his unexpected and sudden death, and

Resolved, That we deeply feel the loss of his genial face, cheering disposition and wise councils whenever occasion brought us together, and that we tender our sincere sympathy to his bereaved family.

On behalf of the Seed and Agricultural Trade of Boston.

THOMAS J. GREY, Chairman,  
J. K. M. L. FARQUHAR,  
M. H. ROWELL,

Committee.

It seems a great misfortune that a few reckless dealers should impair the confidence of the seedsmen and canning trade by handling degenerate stocks, buying the by-products of the canners and the riff-raff of farmers. Just so long as people will buy such junk because it is cheap, it will be for sale.

# ANNOUNCEMENT.

*To our friends and patrons, and to the trade in general,—*

WE, the undersigned, do hereby beg to announce that we have consolidated our interests, and that, commencing on the 15th day of August, 1908, we will open our place at 144 North 7th, Phila., Pa., for the purpose of conducting a wholesale seed, plant, and bulb business.

It would be needless to supplement this brief announcement with numerous promises of what we intend doing, in order to insure our own success;—a consummation devoutly to be wished under all circumstances. Suffice it to say that we are no novices in the business, and that our twenty years' hard experience on the road has convinced us beyond the shadow of a doubt that one "cannot fool the people all the time," nor indeed even "part of the time," and come out on top,—that, in order to win the confidence of the people, (the shortest route to success), one must be sure to give a square deal in return. It is therefore our aim to give a SQUARE DEAL in return for confidence.

Thanking you all for past favors, and sincerely hoping for a continuance of same in the future,—

Respectfully yours,

**SKIDELSKY & IRWIN CO.,**

144 North Seventh Street, Philadelphia, Pa.

S. S. SKIDELSKY.

R. J. IRWIN.

**BERGER BROS.****Wholesale Florists****1305 Filbert St., Philadelphia****During Recess****Tarrytown Horticultural Society Annual Outing.**

The annual outing of this society held at Rye Beach, N. Y., on Aug. 4th, is on record as one of the best ever held. About 115 members and friends were present, and a most jolly and agreeable time was had by every one. The games were well contested and enjoyed by the lookers-on as much as the players. The dinner was excellent and well served and all arrived home safely on the same day.

The list of games and winners was as follows:

100 yards dash—1st Sam Burns, 2d Frank Shaw. Running broad jump—1st James Craig, 2d Albert Hopper. Running high jump—Geo. Begg; James Craig. Potato race—Geo. Begg; Tom Atkinson. Obstacle race—Ernest Behrens; Tom Lee. Three-legged races—Tom Atkins; Sam Burns. Stone throwing—Sam Burns; Arthur Lynch. Hammer throwing—George McIntosh; Sam Burns. Bowling match between married and single men, best two games out of three, was won by the married men by two pins.

L. A. MARTIN, Cor. Sec.

The following named gentlemen have been selected to represent the New York Florists' Club at the bowling tournament in connection with the Niagara Falls convention: Messrs. Marshall, Fenrich, Schreiner, Donaldson and J. Manda.

The Utica (N. Y.) Florists' Club held their clam bake at Ripley's Grove on Aug. 4, with an attendance of 125. A ball game and athletic sports enlivened the time and the affair was voted a grand success.

## FLOWER MARKET REPORTS

The first part of previous week was somewhat quiet and stock accumulated fast especially mixed colors of gladioli of ordinary quality which had little or no demand, the solid colors of red, white and pink selling rapidly. The short crop of early asters are about over and a few branching or late varieties are seen. The mid-week sale was quite satisfactory as to roses, carnations, lily of the valley, Beauties, etc., as a few good sized floral orders helped considerable. Japan and longiflorum lilies were in demand and cleaned up well. Greens and adiantums took a little life and moved better than heretofore.

But little change is noted in the Chicago market. Trade is possibly a little brisker though no rain has relieved the anxious florist. Asters are suffering severely and the average stock has very short stems. An occasional exception is seen, one dealer having asters, Chicago-grown, with stems fully thirty inches long. Gladioli also show the effects of the drought, the stalks being very small. Carnations are poor and sell slowly. Roses are advancing a trifle in price. Beauties being in demand particularly. Tritoma and golden glow are seen and sell fairly well.

The weather has been the hottest of the season and the result is that everything is at a complete standstill. There are very few carnations and they are poor. Only small roses are to be had. Quite a quantity of asters are in the market but no first-class stock among them. American Beauty has maintained its reputation by withstanding the heat and remaining one of the few satisfactory offerings of the flower market. Gladioli and lilies are still in good supply and are offered at fairly low prices. Some very good lily of the valley and orchids are to be had in limited quantities. Chrysanthemums are looking fine and the outlook is good for early blooms.

What strikes the visitor to the wholesale flower markets most forcibly at the present time is the great abundance and general accumu-

lation of asters, gladioli and lilies. By the latter is meant the hardy garden sorts such as auratum, speciosum roseum and magnificum, together with a moderate proportion of tigrinum. From one to two dollars per hundred is the prevailing price, counting all buds, but there must be considerable shrinkage in returns on account of unsold stock. Gladioli and asters are in the same box as business is unprecedentedly dull, even for the midsummer periods. The gladioli average up much better as to quality than they did a few years ago, such popular varieties as America, Shakespeare and Princeps and many of the Childsii type being in evidence in place of the old Brenchleyensis which until recently formed the larger part of the market shipments. While the asters are also generally better than ever before at a corresponding date the proportion of the big loose-flowered long-stemmed fancy type is not large. There are, however, enough and more than enough, to fill all demands. Roses do not cut much of a figure just now. American Beauty of best grade experience no difficulty in finding a ready appreciation but the balance of the list gets little attention, and a large part of the shipments must submit to the tender mercies of the street men and speculative element. There is an abundance of lily of the valley in vary-

ing grades. Orchids are conspicuously missing, consequently there is an incessant call for more than can possibly be supplied but the situation will improve soon as Cattleya gigas, oncidiums and other standard favorites are about due. Next week will see the wholesale district half depopulated, judging from the large number intending to participate in the trip to Niagara.

There was an overdose of flowers the past week, especially in the lower grades of asters and white roses. There were a great many poor asters, this crop not having recovered from the dry summer as expected, notwithstanding the copious rains of the past three weeks. American Beauty roses are fully as good as last year and selling well. A few field-grown carnations are coming in good flowers but short-stemmed. The greenhouse product is very inferior. There is a good demand for orchids and these are on the scarce side. The lily of the valley market is in healthy condition as to quality and demand. Sweet peas are still coming in from the north and are readily taken at fair prices; also very good gladioli, the best being America which is eagerly snapped up. Tritomas and hydrangeas are conspicuous among the seasonable minor items.

## Park, Cemetery and Landscape Gardening

cannot be properly done without a dependable leveling instrument. There is nothing on the market which approaches

**BOSTROM'S IMPROVED NO. 2**  
at \$15.00 and

**BOSTROM'S IMPROVED NO. 3**  
at \$25.00

for simplicity, accuracy, compactness and durability, when price is considered. The above instruments are guaranteed, 15,000 satisfied users of these Levels backing up the guarantee. Write for description.

## The Payne Dripless Steel Bar Greenhouse

**The Lightest  
Construction and  
Greatest Strength**

Pronounced by experts who have examined it to be the most decided step ahead in practical greenhouse construction. It consists almost entirely of steel, including the ridge, having just sufficient wood to hold the glass in place and protect it from the changes of outside temperature.

The small wood bars employed are securely fastened to the "T" bars by means of bolts passing through both at frequent intervals. These bars are the means of insulating the glass from the iron and are arranged in such a way that they preserve the internal heat and prevent condensation, at the same time they are small enough to bring the "T" bars sufficiently close to the glass, to prevent the formation of ice at those points. There is absolutely no drip from this construction.

All of the wood is open to access at all times, and is not encased in steel, therefore, it has a thorough circulation of air around same, and can be painted at all times, thus making it beyond question the lightest and most durable construction yet manufactured. Greenhouses built on this principle are constructed with curved glass sashes doing away with the shadows from the eave plate. The roofs are supported either by our skeleton iron rafter or by posts and the steel work throughout is galvanized. These features combined with the minimum quantity of wood used represent the highest type of greenhouse construction.

**We Manufacture Every Type of Greenhouses.**

**Everything for the Heating Plant**

*Our Steel Bar Houses are manufactured under patents granted and applied for. Let us estimate on your requirements*

PATENT APPLIED FOR

### Why My New Curved Iceless Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars incased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: Result, the driest roof ever used for greenhouse purposes.
- 4th. **THE MOST IMPORTANT OF THEM ALL.** The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

**William H. Lutton,** Horticultural Architect and Builder  
West Side Ave Station (C.R.R. of N.J.) Jersey City, N.J.

## KING STEEL FRAME TRUSSED HOUSES

Patent Rights Reserved

Up to 50 Feet Wide Without Posts

It Casts Less Shade. It Has Greater Stiffness.  
It Can Be Built in Wider Spans Without Posts.  
It is Less Expensive.

The introduction of this design marks a great advance in greenhouse building, making the highest type of construction available to the average commercial grower.

# DREER'S CONVENTION MONTH SPECIAL OFFERS

## Cocos Weddeliana

A grand lot of plants in 7 in. pots, elegant, graceful specimens 30 inches high, perfect in every way, something entirely different from what you have been offering to your customers in the Decorative line heretofore, and a plant which will appeal to everyone: Price \$2.50 each, also a smaller size in five-inch pots, 24 inch s high, at \$1.00 each.

We are also carrying in stock an elegant line of the usual sizes for Fern Dishes in good shape, 2 1/2-inch pots, 5 to 6 inches high, \$1.50 per dozen; \$10.00 per hundred; \$90.00 per thousand 3-inch pots, 8 to 10 inches high, \$2.00 per dozen; \$15.00 per hundred; \$140.00 per thousand.

## Our Exhibit at the Convention

During the Convention we will have on exhibition at Niagara Falls, N. Y., a full line of samples

Our entire staff of travelers will be in attendance and will be pleased to give any information desired, and show samples.

Delegates attending the Convention are cordially invited to stop off at Philadelphia (either going or returning) and inspect our Nurseries at Riverton, N. J. where you will always find something to interest you.

## KENTIAS

Although the stock of Kentias generally is scarce not only in this country but also in the Palm centers of Europe, you will find our stock of nearly all sizes very complete, and all here offered of excellent quality and market value.

### Kentia Belmoreana

	Per doz.	Per 100	Per 1000
2 1/4-in. pots, 4 leaves, 8 to 10 in. high	\$1.50	\$10.00	\$90.00
3 " " 5 " 12 " "	2.00	15.00	140.00
4 " " 5 to 6 " 15 " "	4.50	35.00	
6 " " 6 " 20 to 24 " "	1.00 each.

### A WONDERFUL NEW NEPHROLEPIS

# Nephrolepis Superbissima

INTRODUCTION OF 1908

**W**E desire to call attention to this new fern, which originated with us and which we are introducing this year. It is a **very unique and distinct novelty** — as distinct from *Nephrolepis Piersoni* and *Piersoni elegantissima* as they were from *Bostoniensis*. It is in fact a complete break. The fronds are very heavily imbricated, the pinnae overlapping, making the fronds very dense and compact.

It differs from the other *Nephrolepis* not only in form, but also in color, being a **richer and darker green** — entirely different from the yellowish green of all the other *Nephrolepis*. The plant is very sturdy in its habit, the fronds never breaking down.

While a photograph shows a similarity to its predecessors, it is absolutely distinct, not only in the formation of the fronds and color, but also in its habit and general characteristics. It makes a much more dwarf and compact growth, the fronds being very dense, firm and rigid, and having a great deal more substance, so that it **will stand more knocking around than any other fern of this type**.

It is a sterling novelty. Experts who have seen it consider it by far **the best fern ever sent out**. It is a plant that needs to be seen to have its great value and sterling qualities appreciated. It really is not in the same class with the other varieties. It was awarded a

### ... FIRST-CLASS CERTIFICATE ...

by the Royal Horticultural society at Crystal Palace in London, November, 1907, the plants exhibited there having been shipped from New York two weeks before that time. After being exhibited in London, the same plants were shipped to Edinburgh, Scotland, where they were again awarded a first-class certificate by the Scottish Horticultural Society. This will indicate the value of the plant as a novelty, and also demonstrates in a very conclusive manner its fine keeping and shipping qualities. We have just begun shipping advance orders, and new orders can now be shipped immediately on receipt.

Fine, strong plants, 2½ inch pots, \$5 per dozen, \$35 per 100; 4 inch pots, \$7.50 per dozen, \$50 per 100; 6 inch pots, \$1.50 each, \$15 per dozen.

**F. R. PIERSON CO., Tarrytown-on-Hudson, New York**

## Rambles in the Rockies

"Oh, Beulah Land! Sweet Beulah Land."

I have seen much of our glorious country, but I think Beula, Colo., is one of the finest spots on earth. For 25 years I have had cottages here and I think I have not missed a year in coming to this charming resort. It is a very fertile valley shut in by mountains and furrowed by sparkling streams. It is a restful place and "the wine of the mountain air" sets your blood tingling with a new life.

Sometimes, as I come, genial Nature seems in a coquettish mood. As we approach the mountains from the plain the whole mighty range is veiled in cloud, which, like a vast curtain is moved to and fro by unseen hands. Now the snowy crest of Old Baldy is uncovered, next there is a rent in the veil, and lo! Old Scraggy with turrets and domes of granite—torn from the bosom of the earth and thrown skyward, is uncovered; then the curtain is lifted and mountain sides covered with eternal green, jutting crag and glorious forests are revealed. After a time of these partial exhibits the whole veil is lifted and floats away and the grand panorama is disclosed.

We come into the little village tired and worn with hard work and longing for rest, and over the summit of Nebo the clouds come like a flock of sheep; down the mountain side they gather all around us in silent, restful sympathy.

### SEED GATHERING

This place has long been famous for its trees of marvelous sheen—concolor, pungens and Englemann. One spring we gathered 85,000 for the United States Government plantations. This is headquarters for the seed collectors. Two years ago nearly two tons of choice rocky mountain conifer seeds were shipped from this point. While Prince Bismarck was alive we sent him quite a quantity for his forest plantation. Last year there were no seeds, and in a ride of hundreds of miles among the foothills and in the mountains I have not seen a single cone where we used to gather tons of seed. I have had a conference with our collectors and they inform me that in the high altitudes at an elevation of 10,000 feet or more, where the late frosts did not injure the cones there will be a limited amount. They cover a territory about 400 miles in extent and in about two weeks the arduous work will begin.

### HOW THE WORK IS DONE

A collector will have two or three assistants. They will go prepared to camp. They will have a tent and great bundles of sacks. Light ladders are made on the ground—some of the trees they climb—but their main dependence is on the squirrels. Up in those forests I have seen great trees bending with their weight of cones and in two weeks not one is to be seen. The nimble little fellows gnaw them off and let them drop and often the ground is covered. Now is the time for the collector. It does not take him long to fill his bag.

But what a scolding he gets from the little fellow. He exhausts all vocabulary of squirrel rage. The little fellow will scold a while and work awhile, but he drops all the cones just the same. It would be cruel to rob them were it not for the fact that he gnaws off twenty times as much as he can use. Sacks are packed on burros and horses which take them down the winding trails to the wagons, perhaps miles away. They are then loaded and brought here where some sunny spot is chosen and they are spread on canvas to dry. They are then threshed out and put through a fanning mill. Some have to be washed and dried immediately. Then they go to different parts of the world.

### STORAGE METHODS OF THE SQUIRRELS

These shrewd little fellows understand the business. They have regular storage beds they have used for years among rotted pine cones. It would not do to pile them up for they would rot, and they cannot very well keep them dry, so they dig a little pocket in the cone dust and set up perhaps a peck of cones on end, careful to pack so they will not heat or rot. These they carefully cover with the dust and they will keep a long time. I have known collectors to go out in winter when the snow was two feet deep and find these deposits and gather cones by the sack full.

### THE SUPPLY OF SEEDS

There is but little of the ponderosa pine of the foot hills. There is a limited amount at high elevations. Mark one thing, seeds from the foothills are best for the hot plains. Those from the high elevations are best for the North. In fact those from the hot foot hills will winterkill in Manitoba while those from high elevations and from the Black Hills will be all right.

There will be but a limited supply of Douglas spruce. Here let me sound a note of warning. On account of the scarcity of eastern slope seed, some dealers are securing seed from the western slope which is absolutely worthless in all our northern states. The seed may look all right and will germinate well, but every tree raised from them will die unless raised in the South. It is a pity that discrimination is not used.

Suppose a man in Iowa orders Douglas spruce seed; one firm offers it high—another at half price. He takes the latter as he doesn't know the difference. He gets a good stand and loses every seedling the next winter and then proclaims far and wide that the Douglas is not hardy in Iowa.

Pungens, Englemann, Aristata and flexilis pine always grow at a high elevation and are hardy in the extreme North. Concolor from the foot hills is not hardy in Minnesota, while that growing at an elevation of 10,000 feet is all right. The sub-alpina is somewhat akin to this, and always grows at a high elevation. Pinus Aristata, one of the most beautiful of all, belongs to the high altitudes.

There will be plenty of pungens, flexilis, Aristata and Englemann and very little of the ponderosa, and but a small supply of Douglas.

C. S. Hamman

### Phases of the florist's character

Gardening has been aptly called "the purest of human pleasures." Every phase of horticulture is pregnant with sentiment and the florist's art in all its operations is so closely interwoven with romance that it is not surprising, when the horticultural craft meet together in convention, that trade talk and commercial topics, all-important though they are, are often put aside for the time being and scientific, classical or aesthetic subjects are eagerly given a hear-

ing. The true florist can never degenerate to a mere business machine. His associations put him in a receptive mood for high ideals, develop his faculties on intellectual lines and so we find him, oftener than otherwise, deriving his best pleasure and recreation within and not outside the bounds of his avocation which yields him all the mental, moral and physical recreation he cares for. There is little danger of the gardener ever becoming a business plodder; the thought is wholly foreign to our conception of what a gardener must be.

### Business value of the convention

These truths explain what has been a continual source of wonder and sometimes of disapproving comment when the conventions of the S. A. F. are discussed by those who are only familiar with the methods and operations of similar gatherings in other industrial lines. Such critics are wont to declare that the S. A. F. conventions are simply frolics and have no value in a business way but in this they are decidedly mistaken, being misled by their inability to understand how naturally and completely the horticulturist combines the zest of legitimate enjoyment with the consideration of definite problems of trade and details directly associated with his daily toil. The man who infers that because of the social enjoyments which are so prominent, the S. A. F. conventions are unproductive in a business way should spend a few hours in and about the exhibition department and there learn something of the serious commercial side of the institution. He will have his eyes opened to conditions to which no published story of the convention can ever do full justice and which will materially affect his estimate, thenceforth, of the business value of the S. A. F. convention.

### Affiliation and co-operation

One of the subjects which should be considered as having a vital bearing upon the future standing and influence of the National Society as well as upon the growth of the horticultural industries and the calibre of those employed therein is that of the relationship between the National Society and the various local clubs and associations, and of these local bodies respectively to their members. It must be apparent to every one who gives the subject any careful thought that the province of the florists' club and that of the national body must be very different and that any attempt on the part of either to cover the legitimate field of the other will never accomplish much. There are innumerable factors in the education and training of the florist and plantsman and in their elevation to their appropriate position in the community, which should be taken up and vigorously carried forward by the local institution. These things should not be permitted to occupy the time or attention of the national body which should, under the guidance of men of ripe experience and broad knowledge, turn its activities to problems of a national character which are beyond the scope of the town or state organizations but of vital importance to the well-fare of all. The National Society can never approach its proper usefulness until a better understanding and closer affiliation between it and the local organizations has been inaugurated. To those who feel most deeply concerned in the Society of American Florists and wish to see it take its rightful position as a centralized and dominant force this question of relationship and co-operation with and through the very efficient clubs and societies which are continually coming into being is perhaps the most vital problem which now confronts the S. A. F.

### NASSAU COUNTY HORTICULTURAL SOCIETY.

The society met on Wednesday evening, August 12, President Jaenicke in the chair. President Roosevelt and Capt. J. R. De La Mer were elected honorary members; three active members were elected. Preliminary schedules for the fall show and for the Dahlia Show were agreed on. The latter will open at four o'clock, October 14; Walter Shaw was elected one of the judges. Committees were appointed through the county to solicit advertisements for the schedules; special prizes were offered. The matter of printing new by-laws was placed in the hands of the executive committee, who will report at next meeting on any changes required. Pres. Jaenicke had on exhibition a photograph of his new daisy; S. J. Trepass, specimens of peach grafted on plum stock. James Elmslie, on invitation, gave an interesting talk on the asters he displayed. Following are the awards for points in the monthly competition: Egg plant, H. F. Meyer, 77; tomatoes, John Dromboski, 72; asters, V. Cleres, 74; certificates of culture to H. F. Meyer for collection of vegetables and Jas. Elmslie, asters; certificate of merit, J. Higton, vegetables; honorable mention, H. F. Meyer, cucumbers, Phoenix Roebolini; O. Adder, hydrangeas and grapes.

JAMES KESSON, Rec. Sec.

### ST. LOUIS FLORIST CLUB.

The club held its annual meeting on August 13. In the absence of the president and vice-president, J. J. Beneke took charge of the meeting

BUILDING OF ARTS—MT. DESERT FLOWER SHOW

with thirty members present. The election of officers was a leading feature and resulted as follows: President, William C. Young; vice-president, Edwin Denker; secretary, A. J. Bentzen; treasurer, F. H. Weber; trustee for three years, Henry Oster-tag. Several members were dropped for non-payment of dues. The trustees reported that the picnic cost the club \$50. John Steidle, state vice-president of the S. A. F., reported that about ten members would take advantage of his arrangements with the Big Four R. L. to attend the convention at Niagara Falls. Discussions from the question box made things interesting for all. The invitation of

J. F. Ammann of Edwardsville to hold the next meeting on September 10 at his place was accepted. After adjournment Trustee Oster-tag invited all to a fine lunch.

### CLUB AND SOCIETY NOTES.

A floral exhibit will be a feature of the Tri-State fair held by Tennessee, Mississippi and Arkansas on September 28 at Memphis.

The last meeting of the Cincinnati Florist Club was held with R. Witterstaetter, and the chief business was the election of D. Sunderbruch as secretary to succeed C. J. Ohmer, resigned. President J. A. Peterson announced that everything was in readiness to present the invitation to the S. A. F. to meet in that city next year. After refreshments bowling was indulged in.

The American Association of Cemetery Superintendents held its twenty-second annual convention at Kansas City, Mo., August 11-13. About 125 members were present at the opening session when Mayor T. T. Crittenden, Jr. welcomed them to the city. A stereopticon lecture was the event of the first evening. The various cemeteries in the locality were visited, a barbecue dinner was served at Swope Park and the closing session on Thursday afternoon followed.

About forty members of the Gardeners' and Florists' Club of Boston spent the afternoon of Saturday, August 15 at the Massachusetts Agricultural College, Amherst. Lunch was served in Draper Hall after which President Kenyon L. Butterfield welcomed the guests and vice-president William Downs responded for the club. A tour of inspection was then made through the orchards, garden, botanical department, the site of the new horticultural building and greenhouse, etc. The company returned to Boston by electric in the evening.

A TABLE OF FRUIT—MT. DESERT FLOWER SHOW

# SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

A Remarkable Gathering of the Florist Craft at Niagara Falls —  
The Trade Exhibition the Prime Attraction.

Cincinnati the Next Meeting Place.

## Officers Elected.

PRESIDENT—J. A. Valentine, Denver, Colo.  
VICE-PRESIDENT—E. G. Gillett, Cincinnati, O.  
SECRETARY—W. N. Rudd, Morgan Park, Ill.  
TREASURER—H. B. Beatty, Pittsburg, Pa.

Never before has an S. A. F. Convention opened with more delightful weather or more inspiring circumstances. The attendance was very large, equaling if not exceeding that of any recent year and probably unequalled even in the extent of territory represented. The entire ground floor of the big Cataract House, with the exception of the hall used for the meetings, together with a large annex built over the vacant space in the rear, was filled to the utmost with exhibits and it was stated that for the first time in the history of S. A. F. exhibitions the applications for space exceeded the accommodations and quite a number of late applications had to be turned away. A good many of the delegations had arrived on the previous evening and by noon on the opening day, Tuesday, August 18, all had arrived and the exhibition halls were thronged, the number of ladies present being notably large. Taken all together, it was a remarkable gathering together of the florist craft. Detroit sent an enormous crowd as did New York, Philadelphia and Chicago. The attendance from Cleveland, Cincinnati, St. Louis and Washington was a representative one. Boston and Pittsburg sent rather light delegations. The New York people were loud in their praise of the attention given them by the special representative of the D. L. & W. R. R., who accompanied the party and of Messrs. Rickard and Fenrich who had been entrusted with the duty of entertainment on their special train. The Detroit party had enjoyed a night on Lake Erie and a portion of the Chicagoans had traversed Lake Michigan and Lake Erie, having started on Saturday evening.

### THE OPENING SESSION.

The opening session of the convention was called to order by Vice-President George F. McClure at 2:45 p. m. He introduced Mr. E. T. Williams who in the absence of Mayor Douglass and at his request, extended the right hand of fellowship to the visitors, on behalf of the City of Niagara Falls. He made a flowing and polished address referring enthusiastically to the

world famed scenic properties of Niagara Falls which he said were recognized as the heritage of the whole world and would never be allowed to suffer from any commercial interference with their beauty and grandeur. He deprecated the agitation raised by the American Civic Association which he said was hysterical and based on theory and false premises.

Patrick O'Mara responded with characteristic eloquence, for the society. He referred to Niagara as an asset without a peer, aside from its economic value and that aesthetic sense and love for the beautiful is what induces us to prize Niagara and not its properties in kilometer or horse power, and warned the previous speaker in a jocular way that the American people, while fully trusting the city to do the right thing, were keeping their eye on it. He characterized the S. A. F. as existing for the purpose of making the world better and more beautiful, and ready to do its part in a general and specific manner.

The vice-president then introduced President F. H. Traendly who received an ovation and then after a few appreciative words proceeded to read his address as follows:

### PRESIDENT'S ADDRESS.

Ladies and Gentlemen: In preparing my address to you, I am following a custom established by all of my predecessors. I have no thought of outlining any policy which would help to build up our society to the numbers to which its good work for the different branches of our business entitles it. I know well that every conceivable plan for accomplishing this has been tried. The florists of the country have had an object lesson showing the value of organized effort to accomplish results, in the success of the society last year in appearing before the Interstate Commerce Commission for the purpose of compelling the express companies to revise their freight rates. The contention of the S. A. F. & O. H. prevailed, thus financially benefitting many florists throughout the country. This one instance should prove to

every one, grower, retailer, wholesaler and supply man, that his interest lies in becoming a member of the S. A. F. & O. H. They may then see that many problems which they have faced at some time during their career and conquered with difficulty, if at all, would have become easy if they had been members of the S. A. F. & O. H.

For the younger men of our business who expect to make their living in the florist business, being a member of the S. A. F. & O. H. will gain them much valuable information, as well as the experience and advice of our older members; and for the young man whose experience is confined to one branch of our business, there is no better way of gaining a general knowledge of the business than by attending the meetings of the S. A. F. & O. H.

We have just passed through one of the worst panics this country has had in years, and I think the florist business is to be congratulated, that it has weathered the financial storm as well as it did. To my knowledge very few failures have occurred, and while florists in general have not made the money they have made in recent years, I feel that I am safe in saying that most of them have more than paid expenses. I think this is much better than most manufacturing concerns were able to do.

Ex-President Burton and Ex-President Breitmeyer, in their respective messages, called attention to the large amount of greenhouse building going on at that time, and both felt that it would tend to over-production, and their predictions, I think, have since been verified. All through this last season especially has this been so in regard to carnations, the New York market alone receiving at least four times as many of these flowers as were ever received before in any one season. This over-production has reacted on the producer to the extent of a large amount of worry as to the disposal of his stock.

Considering a season like the last, when flowers were abundant and cheap, it would seem to me that this

was a most opportune time for the retailer, who is the only outlet for the grower. It is to give up the marketing of painted iron or wax flowers, and also the use of cheap galax leaves, and advance the sale of greenhouse production. This would give the men who are the backbone of our business a chance to get more of the money, which the intending purchaser meant for flowers.

#### Council of Horticulture.

The knowledge has come to me on numerous occasions of the good work done by this body in distributing articles through the daily press. Some of our largest dailies have given whole pages to these papers on the planting and care of different kinds of plants, some of these articles being beautifully illustrated. I think our society should donate a liberal sum to keep up this good work, as in no other way can I conceive of so much good advertising to our business having been done for so little money as has been subscribed in the past.

#### National Flower Show.

This I think is the most important undertaking in the history of the society, and the success of our First National Flower Show should be the earnest wish of every member of the S. A. F. & O. H. both from a financial as well as an artistic point of view. On the success of our first show much depends as to whether the society will continue to give shows in the future, and it behooves us from all parts of the country especially those of us in the East, to put our shoulders to the wheel; to contribute to the best of our ability whatever we have to exhibit in the line of plants or cut flowers, without regard as to whether the premium offered will compensate us for the value of the goods exhibited, but to remember that our reward is to come in increased future business.

#### National Flower Show and Private Gardeners.

To the men in charge of large private estates we must look for help in making our show a success. These men are in a position to exhibit the finest specimen plants, as well as the finest chrysanthemums and other cut flowers. I know the question has often been asked by some of the private gardeners, "What does the S. A. F. & O. H. do for us?" and we might answer that all of its energy is devoted to the cause of horticulture, from which all of us derive our livelihood, and therefore the Society deserves the support of every florist and gardener.

#### Horticultural Education in the Public Schools.

Much good has been done in the past by our society, and some individual members in the assistance lent to the different cities and national governments in pushing this good work along. I am sure we all appreciate the refining influence such education will have on the children, and I therefore hope that the good work will be kept up.

#### Registration of Ornamental Plants.

The Bureau of Plant Industry, Department of Agriculture at Washington has under consideration the matter of a plant registration bureau, the plan of which would I am sure only require

the endorsement of the S. A. F. & O. H. to be put in operation, and tried and found to be practical might lead up to other things from this department public trial grounds for instance.

After conference with the Washington authorities, the following plan of registration has been outlined and is presented to you in the hope that the matter will receive your earnest attention at this convention.

**Object.** To secure uniformity ofomenclature for a given plant, and in the interest alike of the originator, seller and purchaser, to secure accuracy of description in trade catalogues, and to prevent error and confusion by exploiting as novelties under new names, plants already in the trade under established names.

To protect in America the rights of the originator or first introducer of a new variety or form of ornamental plant, by maintaining a record of the name of the originator, the parentage of the new form and date of its presentation for registration.

**Method of Procedure:** The registration of introductions and novelties to be encouraged by securing the cooperation of the Society of American Florists and Ornamental Horticulturists and allied organizations, but effort will be made to

E. G. GILLETT  
Vice President-elect.

secure information and keep records of as many introductions as possible, whether request is made for registration, or not.

A list of all the names found in American trade catalogues will be compiled, and these names together with names found in such standard lists as the Official Catalogue of the National Daffodil Society, (Engl.) Simon et Cochet "Nomenclature de tous les Noms de Roses," Carr "A peony check list" and other similar lists, shall constitute a standard list of names which may not again be used for plants belonging to the same group. From this list as a basis a check list of the plants in the American trade will be prepared as soon as the information can be secured, giving the correct botanical name of each species and so far as can be determined the name by which each horticultural variety is best known to the trade, indicating when possible the important synonyms.

Registration of the names of introductions and novelties will be made on application and the submission when possible of such material and descriptive matter as may be required for future comparison of a plant under a given name with the type originally registered and a statement, and a statement under affidavit of the originator or first introducer, concerning the origin of the variety or form for which registration is requested. Beyond this statement there will be no guaranty that the name first registered represents a variety new to the trade.

The originator or first introducer has the duty to name a new introduction or variety and varietal names must be distinctive and the names of introductions must not be changed except where necessary to conform to the rules under which application is made.

Information concerning the origin of a variety or form will be held confidential until after the distribution of the catalogue of the individual or firm for which registration is made or which first gets the registered name for the variety in question, provided the name is listed in a catalogue which is issued before the 1st of July next succeeding the date of registration. When from the facts submitted in an application concerning the origin of a given variety it is evident that the same variety is represented by an earlier application from another individual or firm, registration will be refused for the latter applicant, but with their consent the parties interested will be put into communication with each other with a view to securing the introduction of the variety in question to the trade under the same name by the individual or firm concerned.

Registration will be refused when the name proposed does not conform to the rules printed on the reverse side of the application form, when proof cannot be furnished if required that the variety to which it is proposed to apply the name is distinct in origin from existing varieties, when necessary herbarium material, or when a statement concerning the origin, and a description sufficiently comprehensive to clearly express the characters or qualities of the variety together with a comparison of the one of which it is supposed to be an improvement or modification, are not furnished.

Records of identification will be kept when the nature of the subject will permit, these records to consist of descriptions, herbarium material of various kinds, photographs and colored drawings as may be necessary.

**Publications:** An annual publication will be issued after July 1st, which will describe as accurately as possible the registration of the previous year and state the name of the individual or firm introducing each with the affidavit of the originator or introducer concerning the origin of each variety for which the name has been registered.

#### Date of Meeting.

From a great many quarters I have heard complaints as to the date of our meeting, and while it is impossible to suit every one, this matter is worthy of our consideration. Some of our recent conventions have been held at a time when the weather was extremely hot, and this has been the reason for a great many of our members not attending these meetings. A change to the first week in September might be to our advantage, but I should advise that we go slow before making any change in our dates, and should get the opinion of every member of the society.

#### Tariff.

The question of a revision of the tariff may come up in the next Congress, and I would suggest that members who might be affected by or desiring change in the present tariff present their case to the Legislative Committee of the Society so that their interests may be taken care of.

#### Parcels Post.

I think that our society should keep in touch with the Postal Progress League through our Secretary, and when such legislation as we have endorsed comes up before Congress, the Secretary should draft a letter, a copy of which should be given by every member to his Congressman with the request that he do his utmost to further such legislation.

#### Ladies' Auxiliary.

The ladies are to be congratulated

on having an organization of their own, which enables them to become better acquainted, and adds to their pleasure and ours by a reunion every year at the annual convention.

#### Sports.

I am heartily in favor of having all of the different kinds of games, which have been features of the past convention, as I think they have been the means of bringing a great many of our younger members into the society, always remembering that business should be finished first and then have your sport.

Secretary W. N. Rudd then read his annual report and was followed by Treasurer Beatty with the financial report for the past year. The reports were as follows:

#### SECRETARY'S REPORT.

The undersigned assumed the office of Secretary on December 6th, 1907, as a temporary appointee of President Stewart, to succeed the late Secretary, P. J. Hauswirth, whose untimely death just at the close of his first year of service, we all deplore. This appointment was confirmed at a special session of the Executive Committee held in Philadelphia, December 23th, 1907.

The administrator of the estate of the late Secretary, requested that a careful check of his accounts should be made. This was done, and the same were verified, item by item. Immediate settlement was then made as per authority given the Secretary at a special meeting of the Executive Board on December 28th, 1907, and all funds due the Society were promptly placed in my hands, and by me transmitted to Treasurer Beatty, as per financial report hereto attached.

It has been the custom in years past for the Secretary to include in his report, the important matters from the proceedings of the Executive Board. Under resolution adopted at the last convention a full summary of the proceedings of the Board will be presented at a later hour, so that such items are omitted here.

The only subject of national legislation in which the society is especially interested at the present time, is the pending bill regulating the sale of seeds. The negotiations regarding this bill have been conducted by the seedsmen, and they have succeeded in having action suspended. It seems to your Secretary that, in view of the fact that our members are largely buyers and users of seeds, we should have a hearing in the matter, as our interests may not be identical with those of sellers of seeds in all respects. The original bill was very drastic in its provisions, and if passed would be likely to largely increase the cost to us, without giving us any off-setting advantages. I would suggest that the legislative committee be requested to watch the course of the bill and apply for a hearing at the proper time.

The National Flower Show is an event in prospect of great interest, but reports regarding it will be made by the special committee in charge at a later session.

#### Transportation.

Formal application was made to all Traffic Associations for reduced rates for our convention. The eastern lines quite generally granted a rate of one

fare and three-fifths for the round trip.

The lines west and south of Buffalo refused to make any concessions. Re-limits were applied for and obtained twice, but any concessions in the way of reduced rates were refused, except when coupled with conditions with which it was impossible to comply. An extensive correspondence was carried on and the matter was taken up direct with various officials but nothing could be accomplished. The recent general reduction of passenger rates from 3 to 2 cents per mile was given as an excuse for not making concessions.

#### Medals.

Medals have been delivered during the past year as follows:

Silver Medal: The Cottage Gardens Company, for carnation Alma Ward, offered through the American Carnation Society, and awarded at their Exhibition at Washington, January, 1908.

Bronze Medal: R. Witterstaetter, for carnation Afterglow, offered and awarded as above.

#### Plant Registration.

New plant names have been registered since last report as follows:

No. 370—January 27th, 1908. Name of Rose registered July 14th, 1906, by Paul Niehoff, as Aurora, changed to Mrs. Mary Niehoff.

No. 371—February 15th, 1908. Name of Hydrangea registered July 15th, 1906, by the E. G. Hill Company, as Hydrangea arborescens alba grandiflora, changed to Hydrangea arborescens grandiflora forma nova.

No. 390—April 27th, 1908. Canna, W. E. Cottrell, by the Frank Cummings Bulb and Plant Company, Meridian, Mississippi.

No. 291—May 1st, 1908. Sweet Pea, Governor John Franklin Ford, by Anton C. Zvolanek, Bound Brook, New Jersey.

No. 392—May 1st, 1908. Sweet Pea, Greenbrook, by Anton C. Zvolanek, Bound Brook, New Jersey.

No. 393—May 1st, 1908. Sweet Pea, Blue Bird, by Anton C. Zvolanek, Bound Brook, New Jersey.

No. 394—July 10th, 1908. Rose, Silver Moon, by Peter Henderson and Company, New York.

No. 395—July 10th, 1908. Rose, Carnet Climber, by Peter Henderson and Company, New York.

No. 396—July 10th, 1908. Rose, Dr. W. Van Fleet, by Peter Henderson and Company, New York.

#### Members Lost by Death.

Since the last report twelve members have died:

1907—September 29, E. A. Sanders, Chicago; December 4, P. J. Hauswirth, Chicago, (Life Member); December 18, W. W. Edgar, Waverley, Mass., (Life Member).

1908—January 31, J. B. Heiss, Dayton, Ohio; March 12, J. M. Gasser, Cleveland, Ohio, (Life Member); April 2, Warren F. Will, Roxbury, Mass., (Life Member); April 6, F. P. Davis, Mobile, Alabama; May 19, Wm. Scott, Buffalo, New York; June —, Jas. Shanley, Brooklyn, New York; June 16, E. Hippard, Youngstown, Ohio; June 17, Alex. Wallace, New York; August 2, Christian Rieger, Pittsburg, Pa.; August 9, Warren W. Rawson, Boston, Mass.

#### Membership Statistics, July 31st, 1908.

Total annual members as per printed report of 1907, 719; Re-instated since publication of annual volume, 6; new members, 32; deceased, 8; total annual members enrolled, 749. Total life members as per printed report of 1907, 157; new life members, 17; deceased, 4; total life members enrolled, 170; total members enrolled, 919.

#### Approximate Percentage of 1907 Membership in Various States as Compared With Total Names in the Florists' Directory.

Alabama, 5+; Arizona, 0; Arkansas, 0; California, 1—; Colorado, 5+; Connecticut, 6—; District of Columbia, 27—; Delaware, 2 —; Florida, 3—; Georgia, 4—; Idaho, 0; Illinois, 6—; Indiana, 5—; Iowa, 2+; Kansas, 0+; Kentucky, 6; Louisiana, 5+; Maine, 1—; Maryland, 11—; Massachusetts, 6—; Michigan, 7 —; Minnesota, 4—; Mississippi, 2+; Missouri, 3; Montana, 0; Nebraska, 2—; Nevada, 0; New Hampshire, 3; New Jersey, 7—; New Mexico, 0; New York, 6—; North Carolina, 6—; North Dakota, 0; Ohio, 6+; Oklahoma, 0; Oregon, 0; Pennsylvania, 13—; Rhode Island, 6—; South Carolina, 4—; South Dakota, 2+; Tennessee, 0—; Texas, 1; Utah, 0; Vermont, 0; Virginia, 4+; Washington, 1—; West Virginia, 10+; Wisconsin, 5+; Wyoming, 0.

From the above it will be seen that the District of Columbia is far in the lead, with Pennsylvania a bad second (they had the convention last year too) Maryland and West Virginia divide honors for third place. Missouri beats all the big floriculture states, with New Jersey and Michigan next, but about a point behind. Massachusetts and Ohio lose to them by a neck, while Connecticut, Illinois, Kentucky, Louisiana, New York, North Carolina and Rhode Island are bunched near the 6 per cent mark.

There are listed in the Florists' Directory in round numbers 15,200 firms doing business as Florists, Nurserymen or Seedsmen in the United States. Our membership amounts to almost exactly 6 per cent of this number.

As the names listed in the directory are of separate establishments it is fair to estimate that there are 25,000 people engaged in the above lines of business as proprietors.

Our membership therefore can not greatly exceed 3-2-3 per cent of the proprietors in the above lines.

#### Lonesome Members.

An examination of the report for 1907 shows that Mr. Chas. Simon, Jr., was the only member in the state of Delaware; Mr. Albert Dirwanger the only one in Maine; Mr. C. A. Moss in South Carolina, Mr. E. C. Newbury in Tennessee and Mrs. A. L. Lambly in Washington. These gentlemen and ladies should be given deserved recognition.

The great state of Kansas had but two members, Nebraska three (we had a convention in Omaha once, did we not?), New Hampshire three and Texas three, while several states have no members at all.

#### State Vice-Presidents.

Many of the state vice-presidents have done excellent work in advancing

the interests of the society in every way in their power. To these the thanks of the society are due. Others have done little and a few have not even paid their personal dues. It seems to your Secretary that no man should accept the honor of such an appointment unless he is willing to at least "make a bluff" at doing the work.

#### Payment of Dues.

Many members seem to overlook the fact that dues are payable on the first day of January, and allow the matter to run along till convention time. The paying of dues at convention time when every one is working under high pressure, and inexperienced help is necessarily pressed into service, is certain to result in more or less errors, and in delay and annoyance to the members.

Quite an item of expense to the society is exchange on checks. Many members instead of sending a money order or a draft on Chicago (which most banks will furnish to their customers in small amounts without charge) are in the habit of sending personal checks which cost from 5 to 10 cents for each collection. This is undoubtedly thoughtlessness in most cases, but it costs the society a good deal of money just the same.

#### The Thanks of the Society

Are due to the publishers of the following papers for complimentary copies of their publications for use in the Secretary's office and for the prompt publication of all notices and reports sent them.

The American Florist,  
The Canadian Florist,  
The Florists' Exchange,  
The Florists' Review,  
HORTICULTURE.

#### SUMMARY OF TREASURER'S REPORT.

Jan. 1, Balance General Fund .....	\$3,279.09	
Jan. 1, Balance Life Membership Fund .....	4,287.76	\$7,567.75
Receipts.		
Dec. 31, General Fund Total Receipts for the year 1907 .....	\$54.73	
Dec. 31, Life Membership Fund Total Receipts for the year 1907 .....	430.76	1,285.49
		\$8,853.24
Disbursements.		
Dec. 31, General Fund Total Disbursements for the year 1907 ..	1,133.03	
Dec. 31, Balance—Cash in Banks.	\$7,720.21	
Dec. 31, Balance on Deposit, Guarantee Title & Trust Co.: General Fund .....		
Checking Account .....	\$ 417.79	
Savings Account .....	2,583.90	\$3,001.69
Dec. 31, Balance on Deposit, Life Membership Fund, Germania Savings Bank .....	4,718.52	
		\$7,720.21

I certify that the balance shown above as on hand January 1st, 1908, is correct as per audited report for 1906.

W. N. RUDD, Secy.  
Examined and found correct,  
JOHN YOUNG,  
WM. J. STEWART,  
Auditors.

#### REPORTS OF COMMITTEES.

The secretary announced that out of 43 state vice-presidents, 25 had fur-

nished reports as provided. These were ordered printed in the Annual Proceedings.

Summaries of the proceedings of the Executive Board and the Census Committee were next presented, the latter by Chairman O'Mara. The difficulties attendant upon securing a full report of statistics of the greenhouse industry were alluded to and the society members were urged to co-operate in every possible way with the Department of Commerce and Labor in the efforts which are to be made to establish a definite system for procuring data of great value to the trade. He stated that the Census Bureau had recommended that ground surface instead of sq. ft. of glass should be used in recording greenhouse dimensions, also that figures showing space devoted to each particular flower be discontinued.

F. R. Pierson reported very fully for the Tariff Committee. He stated that the committee was ready to recommend at the proper time that ad valorem duties be taken off all horticultural products and specific duties substituted. Mr. Pierson's presentation of the mysteries of the appraisers' valuations was impressive and convincingly conclusive as to the undesirability of continuance of present conditions. P. O'Mara, E. G. Hill and Benj. Hammond spoke in approval of Mr. Pierson's views.

Vice-President McClure reported for the Sports Committee and an amusing colloquy between that gentleman and John Westcott of Philadelphia on the topic of bowling and the provisions made for participation by the ladies in this popular pastime at this convention ensued.

The question of standard flower pots was brought up and it being represented that some western manufacturers had been deviating from adopted measurements, a vote was passed instructing judges in the exhibition not to recognize any exhibits of pots which do not conform to the standard adopted by this society. Reports of the Superintendent of the exhibition, the Entomologist and the Botanist followed and the two latter were simply ordered to be printed. Messrs. J. F. Sullivan, Adam Graham and John Birnie were appointed a committee on State Vice-Presidents' reports and Robert Simpson, P. O'Mara and Robert Craig on President's address.

#### THE PRESIDENT'S RECEPTION.

Tuesday evening was devoted to the pleasant and always popular annual President's Reception. President Traendly was assisted by an impressive receiving line of officials and their ladies and many hundreds took opportunity to enjoy his coveted handshake. Dancing and refreshments followed until the midnight hour and the affair was a huge social success.

#### WEDNESDAY MORNING'S SESSION.

On Wednesday morning the session opened at 10.15. The committee appointed to examine the reports of the various State vice-presidents handed in its report and same was read by Secretary Rudd and its recommendations adopted. Wm. F. Gude called attention to the enforced absence of Ex-President Wm. Smith because of ill-

ness, and on his motion a committee consisting of Wm. F. Gude, Ed. Lonsdale and Adam Graham was appointed to convey the kind wishes of the Society to Mr. Smith. On motion of Mr. Gude also, a vote was passed approving of the plan to erect a memorial to the late Wm. Scott in Buffalo and a committee consisting of Fred Breitmeyer, Ed. Winterson, A. Gude, John Birnie and H. H. Ritter was appointed with authority to solicit subscriptions. On motion of Wm. J. Stewart, a committee was appointed to draw up suitable resolutions on the death of Alexander Wallace, editor of the Florists' Exchange. Messrs. W. J. Stewart, H. B. Howard and H. B. Beatty were so constituted.

Prof. J. F. Cowell then proceeded to read his very learned paper on Fertilizers and Fertility.

Prof. Cowell's paper proved prolific in suggestion for discussion and many interesting questions and arguments were made by members on this all-absorbing topic.

#### CINCINNATI SELECTED FOR 1909.

It being announced that selection of place for next year's meeting was in order, J. A. Peterson of Cincinnati took the floor to extend an invitation from his city. Mr. Peterson's invitation was supplemented by cordial letters from the Mayor and other officials of the Queen City. E. G. Gillett further confirmed the invitations thus extended, referring pleasantly to the fact that the convention of 1909 will be the silver jubilee of the S. A. F., and the anniversary of the first convention, held in Cincinnati in 1885. Mr. Wm. Gammage then extended, on behalf of the Montreal florists, an invitation to hold the convention of 1909 in Montreal, Quebec, and in case the invitation is not accepted for 1909, it is extended with equal cordiality for 1910. Invitations in advance for 1910 were also presented from the Mayor and commercial bodies of the city of Rochester, N. Y. On motion of Robert Craig, the secretary was instructed to cast the unanimous vote of the convention for Cincinnati, and this was accordingly done.

#### NOMINATION OF OFFICERS.

Nominations for president were then called for. J. A. Valentine of Denver, Colo., was nominated in an eloquent speech by P. O'Mara, seconded by Irwin Bertermann, Wm. J. Stewart and others, and nominations were closed. The same unanimity prevailed in the case of E. G. Gillett as nominee for vice-president. For secretary, W. N. Rudd was nominated by Edwin Lonsdale and J. F. Sullivan by Mr. Scrivenor. Mr. Hallock paid an eloquent tribute to Mr. Rudd's faithful performance of the duties of secretary during the past year, under trying circumstances. For treasurer, H. B. Beatty was nominated by John Westcott. No other candidates and thus the only contest is on the election of secretary.

#### WELCOME TO CANADIAN HORTICULTURAL ASSOCIATION.

The representatives of the Canadian Horticultural Association having come into the hall, their president, John Walsh, was called to the platform, and amidst great applause and cheering was given a royal welcome, members

all rising in their seats and the hall being filled to the limit. President Walsh responded to President Traendly's words of welcome in a manner that indicated the excellent good judgment of the Canadian Association in making this gentleman their leader.

#### REPORT ON PRESIDENT'S ADDRESS.

Robert Craig reported for the committee on president's address, recommending that articles on cut flowers, etc., be prepared by members and forwarded to the secretary for publication in the daily press under the auspices of the National Council of Horticulture. The committee disapproved of the proposition to turn over the plant registration department to the U. S. Department of Agriculture, believing the present system to be sufficient for all practical purposes. The committee was also opposed to any change in date for annual meeting. They strongly favored the adoption of a U. S. Parcels Post. Their recommendations were adopted by an unanimous vote.

Jos. A. Manda then read the full report of the judges of the exhibition.

Ex-Mayor Cutler of Niagara Falls here made a speech giving details of the local courtesies to be extended to members and ladies, including another informal dance on Thursday evening.

#### WEDNESDAY AFTERNOON'S SESSION.

On Wednesday afternoon the Society indulged in a fraternal visit to the Canadian Horticultural Association in session at the Clifton House on the Canadian side of the river, and were received with profuse hospitality. The appearance of President Traendly upon the platform was the occasion for an outburst of enthusiasm and cordial greetings were voiced by President Walsh. At the conclusion of the routine business adjournment was ordered and the visitors spent the afternoon sight-seeing about the Falls, visiting the power house and other objects of interest.

On Wednesday evening the large hall of the Shredded Wheat Biscuit factory was crowded with a very large and brilliant audience to listen to J. Horace McFarland's illustrated talk on "What the Florists Can Do in the Crusade Against Ugliness."

#### THURSDAY MORNING'S SESSION.

The meeting convened at 10.30 A. M. The polls were opened and during the voting Wm. C. Barry of Rochester, N. Y., read a paper on Out-of-Door Roses, which was a splendid contribution to American rose literature. An interesting discussion followed. Resolutions on the death of Alexander Wallace were read by William J. Stewart and unanimously adopted.

A congratulatory cable message was received from Wm. Duckham and C. H. Torry, dated at Shrewsbury, England, and a telegram expressing good wishes from W. W. Castle of Boston.

Announcement was made that the Ladies' S. A. F. would entertain the S. A. F. members and wives at the Shredded Wheat Company's hall at eleven o'clock.

Discussion on the amendments to

the constitution ensued, and they were adopted.

A resolution was offered by J. Otto Thilow signed by forty-three exhibitors favoring exclusion of the general public from the annual trade exhibitions except on Thursday afternoon, and the resolution was unanimously adopted.

W. F. Gude presented a resolution to be telegraphed to W. R. Smith of Washington, regretting his absence and hoping for restoration to health.

Attention was called to various complaints of discrimination in overcharges and unsatisfactory service on the part of express companies in transportation of flowers. After debate, all those matters were referred to the Legislative Committee.

#### ELECTION OF OFFICERS.

The tellers made their report on the election. W. N. Rudd was re-elected secretary by vote of 196 to 76 for J. F. Sullivan. All the other officers were unanimously elected. Their report was received with prolonged cheers, and the successful candidates responded to calls to the platform and expressed appreciation of the honor and promised the best that was in them for the society's welfare.

#### THE EXHIBITION.

The exhibition was a prime attraction, and the halls were filled with interested visitors and buyers continuously. Following is a list of the various exhibits:

J. A. Peterson, Cincinnati, O. Lorraine begonias and Adiantum Farleyense.

Julius Roehrs Co., Rutherford, N. J., orchids, bays, crotons and palms.

Vaughan's Seed Store, Chicago, decorative plants, bulbs.

F. R. Pierson Co., Tarrytown, N. Y., Nephrolepis superbissima, N. elegantissima compacta and other new forms of Boston fern, also French and Dutch bulbs.

Geo. E. Browne, Greenfield, Mich., American carnation support.

W. F. Kasting, Buffalo, Lorraine begonias.

Henry A. Dreer, Philadelphia, bulbs, decorative plants, plant tubs, glazing points, etc.

Chas. D. Ball, Philadelphia, palms.

Robbink & Atkins, Rutherford, N. J., palms and conifers.

Metairie Ridge Nursery, New Orleans, La., palms and conifers.

Storrs & Harrison Co., Painesville, O., roses.

Jackson & Perkins Co., Newark, N. Y., Hydrangea Japonica rosea.

Lager & Hurrell, Summit, N. J., orchids.

W. A. Manda, evergreens, orchids, stove plants, phloxes, etc.

H. C. Reesor, Springfield, O., hydrangea arborescens and Springfield fern.

Robert Craig Co., Philadelphia, crotons, Ficus pandurata, Nephrolepis Amerpohlii and other decorative plants.

H. F. Michell Co., seeds, bulbs, implements and sundries.

S. Feder, Mamaroneck, N. Y., straw mats.

Wilson Plant Oil and Fertilizer Co., Summit, N. J., Wilson's plant oil, hose, etc.

Arthur Cowee, Berlin, N. Y., gladiolus blooms.

E. E. Stewart, Rives Junction, Mich., gladiolus blooms.

John Lewis Childs, Floral Park, N. Y., gladiolus blooms.

Vick & Hill Co., Rochester, N. Y., asters.

Altimo Culture Co., Canfield, O., gladioli and asters.

A. T. Boddington, New York, bulbs, sweet peas.

Lemuel Ball, Philadelphia, decorative plants.

Roseville Pottery Co., Zanesville, O., decorated art pottery.

Robert Kift, Philadelphia, Pa., ferneries.

M. Rice & Co., Philadelphia, florists' supplies and ribbons.

Schloss Bros., New York, ribbons.

H. D. Mann Co., Syracuse, N. Y., jardinières.

Wertheimer Bros., New York, ribbons.

W. J. Boas & Co., Philadelphia, florists' boxes.

Reed & Keller, New York, florists' supplies, glass ware, plant tubs, etc.

The Deming Co., Salem, O., pumps.

Otto G. Koenig, St. Louis, patent corner lock for hot bed frames.

H. D. Seele & Sons, Elkart, Ind., plant supports.

Peters & Reed Pottery Co., Zanesville, O., fancy pots.

W. H. Elverson Pottery Co., New Brighton, Pa., Standard flower pots.

Whillden Pottery Co., Phila., standard flower pots.

W. P. Craig, Philadelphia, Pa., Italian art pottery.

Edwards Folding Box Co., Philadelphia, florists' boxes.

J. G. Neidinger, Phila., florists' supplies, artificial flowers, etc.

W. F. Kasting, Buffalo, wire frames.

C. S. Ford, Phila., florists' supplies.

L. Baumann Co., Chicago, florists' supplies.

Hummell & Downing Co., Milwaukee, Wis., florists' boxes.

H. J. Smith, Hinsdale, Mass., hardy ferns.

Crowl Fern Co., Millington, Mass., hardy greens.

Madison Basket Craft Co., Madison, O., twig baskets.

S. S. Fennock-Meehan Co., Philadelphia, ribbons.

Chris Winterich, Defane, O., Defiance Greenery Stump.

D. B. Long, Buffalo, floral stationery.

Ever Ready Flower Pot Co., Buffalo, N. Y., pot covers.

H. Bayersdorfer & Co., Philadelphia, florists' supplies, prepared flowers art pottery.

Ionia Pottery Co., Ionia, Mich., white clay pots, wire designs.

I. L. Pillsbury, Galesburg, Ill., carnation staple.

Heim Support Co., Connersville, Ind., carnation support.

J. Ginther's Sons Co., Buffalo, N. Y., iron lawn urns.

E. H. Hunt, Chicago, Wittbold self-watering system in operation, cement bench and greenhouse supplies.

Kroeschell Bros. Co., Chicago, hot water boilers.

John C. Moninger Co., Chicago, greenhouse building material.

Metairie Ridge Cypress Co., Metairie Ridge, La., "pecky" cypress.

King Construction Co., No. Tona-

wanda, N. Y., iron greenhouse building material.

Detroit Steam Trap Co., Detroit, Mich., steam traps.

W. F. Kasting Co., Buffalo, soil pulverizer.

Lord & Burnham Co., New York, greenhouse fittings and implements.

John A. Payne, Jersey City, N. J., semi-iron frame and iron frame greenhouse.

Herendeen Mfg. Co., Geneva, N. Y., Furman boilers.

Foley Mfg. Co., Chicago, ventilating apparatus.

Wilson-Hoyt Co., Short Hills, N. J., concrete steel bench.

Morehead Mfg. Co., Detroit, Mich., Morehead steam trap and boiler feed.

The Advance Co., Richmond, Ind., Advance Ventilating Apparatus and new pipe coupling.

Camp Conduit Co., Cleveland, O., bench tiles

F. O. Pierce Co., New York, Mastic Standard Pump and Engine Co., Cleveland, O., pumping engine.

Niagara Sprayer Co., Middleport, N. Y., sprayers.

A. Dietsch Co., Chicago, greenhouse building material.

Geo. M. Garland Co., Des Plaines, Ill., Garland iron gutter and cement bench mould.

Weathered Company, Jersey City, N. J., greenhouse boilers.

Benj. Hammond, Fishkill, N. Y., slug shot, putty and paint.

#### DURING RECESS.

On Wednesday there was a ball game at Niagara Falls between the Buffalo and All America Florists, which was won by Buffalo with a score of 8 to 3.

The Ladies' Society of American Florists held their annual meeting Thursday and elected Mrs. J. C. Vaughan, president; Miss Meinhardt, 1st vice-president; Mrs. C. H. Maynard, secretary; Mrs. A. M. Herr, treasurer. The old board of directors was elected. The meeting was followed by a reception to members and friends.

#### REGISTRATION OF PLANTS.

Public notice is hereby given of the application of the Conard & Jones Company, West Grove, Penn., for the registration of the plants specified below. These applications for registry were filed in this office on August 14th, 1908, and any person knowing of any reason why the registry of these names should not be made is requested to communicate with the undersigned.

No. 398. Rose—American Pillar—Flowers measure 3 to 5 inches across and very durable. They are borne in immense clusters. Color is a chaste shade of pink, while in the center of each flower is a cluster of bright yellow stamens, these are followed in the Autumn by pretty clusters of brilliant red seed hips. Parentage: Rose Setigera, X Seedling of Multiflora.

No. 399. Canna—Gladio-flora—(No. 2675. C. & J. Co., 1908). Petals are short and rounded and over-lap each other. Color is crimson, changing to carmine rose with an uneven edge of gold to each petal. Height, 3 1/2 feet. Parentage: Sam Trelease x Venus.

No. 400. Canna—Minnehaha—(No.

## RHODODENDRONS, ANDROMEDAS, KALMIAS AND SPECIMEN EVERGREENS

### JOHN WATERER & SONS, LD.

AMERICAN NURSERY

BAGSHOT, - - - ENGLAND

## HARDY NEW ENGLAND GROWN NURSERY STOCK

### Specimen Evergreens for August Planting

Large collection of choice varieties several times transplanted. *Herbaceous Perennials*, Strong field-grown plants in great variety for *September planting*. Catalogues containing everything for the Home Grounds Free.

**THE BAY STATE NURSERIES, North Abington, Mass.**

2744. C. & J. Co., 1908). Form much like Mont Blanc. Blossoms are extra large, petals are long, gracefully curved and have wavy edges. Colors deepen through shades of gold and cream to a center of peach blow pink. Height, 3 to 4 feet. Parentage: Evolution x Seedling numbered.

No. 401. Canna—Rosea Gigantea—(No. 2698. C. & J. Co., 1908). Single petals are 2 1/2 inches across, color a deep rich rose, almost a coral carmine. Plants make a vigorous growth, producing unusually fine clumps of green foliage. Height, 4 to 5 feet. Parentage: West Grove x Numbered Seedling.

W. N. RUDD, Secretary.  
August 15th, 1908.

#### COMING EVENTS.

Boston, Mass., Massachusetts Horticultural Society, Exhibition, August 22, 23.

Mechanicsburg, Pa., Grangers' Exhibition, Aug. 24-29.

Minneapolis, Minn., Inter-Lachen Flower Society, Aug. 25.

Sheboygan Falls, Wis., State Horticultural Society, Aug. 26 and 27.

Lenox, Mass., Horticultural Society Chrysanthemum Show, October 28, 29.

Spokane, Wash., National Apple Show, December 7-12.

#### PUBLICATIONS RECEIVED.

The Yearbook of the Department of Agriculture for 1907, which has just been sent out, contains as heretofore the report of the secretary of agriculture and in the main body of the volume are presented high-class papers dealing with the various phases of agriculture or containing practical information not heretofore published. There are also papers covering a wide variety of subjects prepared by officers of the department in which new lines of investigation are presented in interesting form. The volume is illustrated by 66 plates, of which 16 are in colors, and numerous text figures. An excellent portrait of the late James W. Pinchot forms the frontispiece, a man who in a long and honorable career as a public official and private citizen rendered inestimable service towards the study and practice of forestry in America.

#### CONVENTION NOTES.

Bassett & Washburn took orders for 85,000 O. P. Bassett, the new red carnation, during the first two days of the convention. Poehlmann Bros. led out with an order for 5,000.

The Chicago delegation left on the three o'clock train Monday for Niagara Falls, as there were not enough for the special which was scheduled for six o'clock.

**DAHLIAS.** Now is the time to place your order for bulbs which will insure you getting named varieties in any quantity; prompt delivery.

## Seed Trade

The predictions of a short pea crop which have appeared in HORTICULTURE since last June, are no longer questioned. It is "a certainty and not a theory" which confronts the trade, and we are getting measurably near the point where figures in the way of preliminary estimates can be given about as follows: Alaska, 50 to 60 per cent.; Advancers, 40 to 60; Horsfords, 50 to 65; Admirals, 50 to 65; Surprise, 40 to 50; Extra Earlies, 60 to 70; Gradus, 40 to 60; Thomas Laxton, 50 to 65; Telephones, Duke of Albany, Alderman and all peas of that class, 25 to 50; Champion of England, 40 to 60; Dwarf Telephones, 30 to 50. Most late semi-dwarfs such as Yorkshire Hero, Prince of Wales, Juno, Heroine, etc., will range from 40 to 60. Let it be remembered that these estimates are the "first in the field," probably weeks in advance of any official figures, and before any peas have been harvested except a few Alaskas and Extra Earlies, and the range between high and low figures will not seem so wide as on first reading. It is very confidently predicted that actual deliveries will come between the two figures, and nearer the low than the high. Paste this in your hat for future reference.

Again the pendulum swings towards a fair average sweet corn crop, and at this writing the prospects are quite encouraging. Rains came just in time to save the crop from the scorching heat, and it was quite possibly helped more in the end than it was damaged.

Unfortunately the same cannot be said of vine seeds in the Waterloo district at least, and nowhere is the crop in really fine condition. No extraordinary advance in prices is looked for at this time, as the aggregate acreage is large and a considerable shortage in the crop is not an unmixed evil, and seldom is, unless of course it reaches the dimensions of the shortage in vine seed crops of five or six years' ago, or last year's shortage in the pea crop, or for that matter this year's. This applies to the grower as well as the dealer, as full contract deliveries almost invariably mean sur-

pluses in the hands of growers, which most of them are foolish enough to try to dispose of by cutting prices below contracting figures. But chickens come home to roost very quickly in such cases, for when the grower starts out making contracts for the following year he is lucky if he can get his cut price, and sometimes has to go yet lower. These large crops usually mean sinking prices and sluggish markets, while a 75 to 80 per cent delivery is rarely complained of, and generally keeps the market in an active and healthy condition.

Referring again to peas, a very extensive grower reports the complete loss of over 1000 acres of Alaskas owing to excessive rains, and because the peas were on low ground. Besides Alaskas, the concern has lost hundreds of acres of other varieties, and their experience is much the same as all of the other growers.

The Nott Seed Co. has been incorporated with offices at Troy, N. Y. The active head of this concern is Mr. P. K. Nott, late with Josiah Young also of Troy, N. Y. Mr. Nott is a high class seedsman, and his many friends will wish him success, but he is yet to demonstrate whether he has ideas original and attractive enough to make a place for himself in an already over-crowded field.

The National Seed Co., of Cleveland, Ohio, will make its bow to the public the coming season. The head of the concern is Mr. Richard Templin, formerly of Calla, Ohio. Mr. Templin is certainly going to operate on original lines, and the results will be watched with keen interest. It goes without saying that nothing of a fake character will form any part of his plans. The L. Templin Co., of which he was for many years the active head, was among the foremost in reliability and integrity.

# GIGANTIC PANSIES

Can only be produced from the **Giant Strains**. Our **CHALLENGE PANSY** seed contains only the **Giant** self colors, the **Giant Striped** and **Variegated** and the **Giant Blotched**, all carefully mixed in proportion. You could not buy better seed if you paid **\$100 per Ounce**.

## PANSY BODDINGTON'S CHALLENGE

Trade pkt. 50c;  $\frac{1}{8}$  oz. 75c;  $\frac{1}{4}$  oz. \$1.50;  $\frac{1}{2}$  oz. \$2.75; Ounce \$5.00

*We also offer pansy seed in separate colors.*

*Write for special price and catalogue.*

## ARTHUR T. BODDINGTON

SEEDSMAN

342 West 14th Street - NEW YORK CITY

J. Comont of J. Carter & Co., London and S. B. Dicks of Cooper, Taber & Co., London, are among the recent arrivals in New York.

The W. H. Mixson Seed Co., Charleston, S. C., is the outgrowth of the seed business carried on by the Southern Fruit Co., with the same officers and management.

## American Association of Park Superintendents

As briefly stated in our issue of last week this organization convened at Minneapolis, Minn., on August 11, 12 and 13, this being the tenth annual meeting. The opening session was called to order by President J. F. Cowell at 10:30 A. M., Aug. 11, in the Mayor's reception room in the City Hall and introduced Alderman Merrill, president of the City Council, who made a speech of hearty welcome in which he paid an appreciative tribute to the Superintendent of the Minneapolis park system, Mr. Theodore Wirth, and told of some of the romantic features of the splendid reservation under his care. He was followed by the President of the Park Commissioners, Mr. Northrop, who spoke eloquently of the parks as the most valuable asset a city can have. They give each day new life, new energy and new courage to thousands of the city toilers and it is this thought that inspires, sustains and rewards the members of the park boards of our cities, who give their time without money compensation to this work. He

gave an interesting account of what had already been accomplished and

JOHN W. DUNCAN  
President elect, American Association of  
Park Superintendents.

what it was hoped to accomplish in Minneapolis and seconded the sincere welcome extended by Mr. Merrill. Hon. C. N. Loring the "father of the Minneapolis park system" was next presented and extended a very hearty greeting to the visitors. President J. F. Cowell then voiced the gratitude and appreciation of his Society for the kind words which had been said.

The regular order of business was then taken up, the first item being the report of the Executive Committee, which was ratified and accepted. Twenty-one applications for membership were favorably acted upon.

The report of Secretary F. L. Mulford was next presented. The membership of the Society, he said, now comprised two honorary and eighty active. A new section in the Constitution was favorably acted upon, whereby park boards or governing bodies may become "sustaining" members on payment of ten dollars annually.

The place of meeting for next year was the subject next taken up. The Executive Committee recommended Harrisburg, Pa. Invitations eloquent and forceful were successively presented from Kansas City, Mo., Chi-

# at Minneapolis, Foot of Minnehaha Falls

ago, Ill., Cincinnati, O., and Seattle, Wash. The motion to comply with the recommendation of the Executive Committee was lost and the selection of location was postponed until a later session.

The second session opened with an address of welcome by Hon. C. M. Loring on behalf of the Minneapolis Commercial Club whose guest the Association was on this occasion. A paper by M. H. West on "Oiling and Dust Laying" was next in order and it was followed by a long and animated discussion. A paper on "Park Administration" was next read by the secretary, the author being absent. Among the interesting topics in the "Question Box" which was then opened was the advisability of greenhouses in connection with park work.

The evening session was opened by J. F. Foster of Chicago, who read a paper on the subject of "Concessions." Other papers later presented were "Concrete Construction in Relation to Park Work" by Jens Jensen and "Playgrounds in Minneapolis" by C. F. Booth. Some of the excellent papers and discussions at this convention will be published in *HORTICULTURE* at an early date.

## LENOX HORTICULTURAL SOCIETY.

The summer exhibition of annuals and perennials of this society was held in Town Hall on August 12 with throngs in attendance. Never before has such a fine collection of Phlox decussata been shown here and competition was extremely keen. The prize winners were Miss A. Kneeland, Mrs. George Westinghouse, Mrs. E. D. Wharton, Giraud Foster, Mrs. John Sloane and Mrs. J. E. Parsons and noteworthy varieties were Dawn, Pink Beauty, Cross of Honor, B. Comte. Sweet peas were not so numerous as formerly but the collection of Giraud Foster, which was awarded a diploma, included fine specimens of Etta Dyle, Florence W. Spencer, Black Knight, Queen Alexandra. In the "miniature allowed" class Mr. Foster won with St. George. For a vase of 25 spikes of gladioli there were eight competitors, G. H. Morgan, W. D. Sloane and J. E. Parsons winning with magnificent

spikes of America, most of them measuring over five feet in length. Mrs. E. D. Wharton was first in perennials 18 varieties, with splendid specimens of delphinium, *Physostegia virginiana*, *Platycodon grandiflorum*, etc. Charles Lanier's collection of tuberous rooted begonias and vase of dahlias were noteworthy. In the fruit and vegetable classes Mrs. J. E. Parsons, G. H. Morgan, J. H. Choate, W. D. Sloane and Count de Heredia carried off the honors.

The following awards were made. Certificates to Mrs. John E. Parsons, gardener R. Speirs, for 100 spikes of *Stenanthium robustum*; Count de Heredia, gardener G. H. Thompson, for grapes, peaches and nectarines in pots. Diplomas to Giraud Foster, gardener E. Jenkins, for *Dendrobium Phalaenopsis Schroederiae* and *O. grandis*; John Lewis Childs, Floral Park, N. Y., for 50 vases of named gladioli; Charles Lanier for yellow transparent apples; E. O. Orpet of So. Lancaster, Mass., and W. Angus of Chapinville, Conn., were the judges.

**BUSINESS CHANGES.**

John A. Myer has taken a lease of the Orr greenhouses at Wissinoming, Pa.

John Reuter has leased the greenhouses of Eugene Zimmer at Vancouver, Wash.

Wm. Thomas has purchased the greenhouses of F. W. Meyer at Kalamazoo, Mich.

C. W. Anderson has bought the business of the Conover Floral Co., Shawnee, Okla.

A. E. Moore has purchased the wholesale florist business of D. J. Sinclair at Toronto, Ont.

Ora Hill is in charge of the plant at Corry, Pa., recently purchased by his father, E. C. Hill.

The Park Floral Co. is a new concern at Nanticoke, Pa., composed of Edward Salyer and Henry Cornell.

The Cleveland Cliffs Iron Co. has purchased the Helmsdorfer greenhouses, Negaunee, Mich., and the plant will be closed up.

Henry Sonnebon, Jr., has taken over the business of the Frankford Flower Shop, Camden, N. J., and W. E. Montgomery has the position of manager.

W. A. Bramley has purchased the interest of his father and the business will be conducted under the name of Bramley & Son at the old stand 1181 E. 71st Street, Cleveland, O.

The partnership known as Labelliflo's Nurseries at Voorschoten, Holland, has been dissolved, and the business will be carried on under the same name by A. H. Ingenhoves Van Schaik.

**OBITUARY.**

Francis J. Norton.

Francis J. Norton of Dorchester, Mass., died on August 15, at the age of 29. He was a designer of exceptional ability, having learned his business with his father, M. H. Norton, in the

FRANCIS J. NORTON

store of Norton Bros., Boston. For some years previous to the time of his illness he was employed in the retail establishment of Edward MacMulkin. He was for some time Boston correspondent for the Florists' Exchange.

**ROSE MY MARYLAND.**

This variety, which was exhibited last season, is apparently an excellent grower. Notwithstanding the intense heat of the past few weeks, young stock, including both grafted plants and others upon their own roots, look exceptionally well, the growth being clean, healthy and full of vigor, with no sign of mildew or spot.—"American Notes," in Gardener's Chronicle, London.

You will find something worth reading on every page of HORTICULTURE.

## FLOWER MARKET REPORTS

**BOSTON** There is little change in conditions. Plenty of small roses are to be had;

the young plants under the influence of the hot weather yielding abundantly. Beauties are coming in in good supply and are of good quality. Lily of the valley is in fairly good demand, at a price really too low for such excellent stock. Sweet peas have been practically destroyed by the severe storms and there will be no good stock until the new crop comes in. New carnations of fairly good quality but short stems are arriving. Asters are abundant.

**BUFFALO** Trade is practically at a standstill. The flower buyers must all be away

at the present time, but the market is well stocked and most everything that is needed can be had at short notice. Gladioli seem to remain on the counters especially the mixed varieties; the same with asters of poor quality; select stock of the latter have sold readily but they are not dependable, rainy conditions and heavy wind causing much of the trouble. Beauties and select roses have had a fair demand but there is too much short stock which don't move at any price. Lily of the valley has a little better demand.

**CHICAGO** The long drouth was relieved by two heavy rain storms during the last

week. The growers find their soft-wooded plants are injured by the rain and beating wind as well as by the hot wave that is following. Market conditions are much the same in the case of indoor flowers. Roses are up to the average for August and carnations are in most part poor, but the injury of the outdoor stock makes better demand for indoor material.

**NEW YORK** Business here remains at a standstill. Stagnation prevails in

every line. The chief call is for American Beauty roses, lilies and asters. The latter are of ordinary quality only. Roses are sold for any price offered and there are far more of them than can be disposed of at any figure. If any sell it is usually the white ones. There are millions of gladioli of fine quality. Only a few dahlias thus far.

**PHILADELPHIA** Trading the past week was rather erratic, but on

the whole a fair average for the season. Beauty roses sold well, some of the new crop being very choice. There was also a fair supply of good Kaisersins, and these led the market in whites. Killarneys from cut back plants were fine as a rule, and sold better than Bridesmaids. But the poor Killarneys hung fire. Red roses are still an unsatisfactory proposition, being short-stemmed and not very double. Lily of the valley is a good seller and excellent quality. Very good indoor grown asters are arriving and find ready takers, but the bulk of the aster cut is short-stemmed and poor. Gladioli, especially the light colored like America, are in good supply and going freely. Hydrangea and other hardy outdoor subjects are very plentiful and not in demand. A little early cosmos is seen, for which there is a limited call. Orchids are in lively demand and still scarce. The smilax and plumosus supplies are far too plentiful. Growers should leave the strings uncut during the dull season. They will wither up of course, but the plant is strengthened for the time when prices and demand are better. Nelumbiums and nymphaeas are brilliant and conspicuous and have a bright particular spot all to themselves.

### PHILADELPHIA NOTES.

Our brave boys got an early start Monday morning for the convention headed by Commodore Jno. Westcott who had not neglected the buffet department on the special cars so that everybody must have had a good time and if anyone went hungry or thirsty it was their own fault.

Robert Kift was so busy that it was touch and go whether he would get aboard with his consignment of new and interesting adjuncts for the retail florist. We understand his new globe glasses for natural plants are the most practical and up-to-date that have yet been offered.

Charles E. Meehan of the Pennock-Meehan Co., owing to train schedules from Ocean City to Philadelphia had to go with a few others later on the Lehigh Valley route.

E. J. Fancourt of the Pennock-Meehan Co. went on Saturday night on account of their large exhibit to be got ready. Their new diamond weave lustrous ribbon and the new Faillentine were among his pet novelties.

D. T. Connor of the Lord & Burnham Co. did not start until Thursday night.

Edwin Lonsdale threw dull care to the winds and went along.

All told there was a very good delegation from Philadelphia and we are sure they will have made themselves heard one way or another at the great convention.

## Park, Cemetery and Landscape Gardening

cannot be properly done without a dependable leveling instrument. There is nothing on the market which approaches

**ROSES IN COLORADO.**

A paper by J. A. Valentine of Denver, Colo., before the American Rose Society.

*(Continued from Page 27)***Present Market Conditions in Denver.**

Just at present in Denver the supply of cut flowers is decidedly in excess of the demand. This is apt to be true with us for a short time in the fall and again in the spring, but during the rest of the year the supply and demand seem pretty well balanced. There was a time when a great many roses were shipped to Colorado by eastern growers, but I believe that practically none are shipped in now.

The people of Colorado as a class are what may be termed "good spenders", but not in the way that seems to be generally imagined. There are very few instances of the lucky miner with more money than he knows what to do with. They generally buy what they have use for, and are willing to pay a fair price for it, but it is a mistake to suppose that they are disposed to throw their money away. On the other hand what is commonly known as "shopping" or "haggling" for the sake of getting a small reduction in the price is not very much practiced.

The prices which are obtainable in the Denver market are never as high as the highest prices obtainable in the Chicago market, especially at Christmas, but prices are more even the year through, and a considerable part of the retail trade is supplied under contract, where the prices are fixed in advance. No one has ever made a success of a wholesale commission house in Denver, and it looks as though such an enterprise could not be a success until there is room for two such concerns, for it is hard to get the growers to place confidence in a man who has no competition.

**A Bit of History.**

As nearly as I can determine, the forcing of roses in Colorado only dates back to 1873, when Gus Opitz grew a dozen plants or so. The following year Rushmore & Son planted Hermosa, Isabelle Sprunt, Safrano and

Lamarque, all in a house about fifty feet long.

I have sent out numerous inquiries, and using the replies received as a basis, I estimate that the florists of the State are at present forcing about 35,000 Beauties, 30,000 Brides, 20,000 each of Bridesmaid, Chatenay and Richmond, and 10,000 other roses, including Roosevelt, Killarney, Perle, Kaiserin and Moulton. It is interesting to note that not a single concern reported any Liberty, and that rose seems to have been completely supplanted by Richmond.

The retail business in the State probably approximates \$650,000 per annum, or \$1.00 for each inhabitant. I would not like to venture an estimate of the amount of wholesale business done with adjoining states, but it is considerable. These figures must seem absurdly small to Chicago florists who are accustomed to places with a million feet of glass under one management; but some day the men who have grown rich in Chicago will make their homes in Colorado, where summer and winter are alike delightful, and we in our turn will build large places and get rich catering to their wants.

**Looking to the Future.**

Just at present there does not seem to be any opening for increased areas of glass in the vicinity of Denver, but there are doubtless a number of small towns in the State where a florist could start in a modest way and gradually build up a business which would be fairly remunerative. Such a man would do well to work a year for some established concern where he could observe the methods practiced, and he could then start for himself with less risk of costly mistakes. If success came slowly he would find some compensation in the joy of living among a warm-hearted and generous people, in a glorious climate with noble mountains in view, whose charm would ever increase. What better can any country offer than moderate financial success in such an environment?

This paper would not be complete without some reference to the present financial condition, and I am glad to be able to say that in Colorado the recent depression has not made any appreciable difference in the business. It may be that it is yet too early for us to feel the bad effects from the late panic, and there may still be for us a day of reckoning, but like all others, we are glad to put off the evil day as long as possible.

The nineteenth annual banquet given under the will of the late Henry Shaw by the directors of the Missouri Botanical Garden to gardeners, florists and nurserymen took place on August 12 at the Mercantile Club, St. Louis. The American Apple Growers' Congress convened there on Tuesday and Wednesday and all the delegates were invited guests. A fine orchestra played and the floral decorations by Dunford were greatly admired. William Trelease acted as toastmaster and among the speakers were George T. Lincoln, N. J. Coleman, L. A. Goodman and Otto Opperman. There was a large attendance and the evening was very enjoyable.

## NEWS NOTES.

James Bonnyman of Warwick, N. Y., suffered a heavy loss by hail early this month.

The contract for the new green-houses at Pine Grove Cemetery, Whitinsville, Mass., has been let to John A. Payne of Jersey City.

In the hands of the new owners Alex. Mitchell and C. E. Hurlburt, the Mitchell plant at Beverly, Mass., is being remodelled and fitted with up-to-date equipments.

The new officers of the Inter-Mountain Nursery Co., Brigham, Utah, are, President, T. F. Troxell; vice-president, B. Nelson; secretary and treasurer, E. M. Lyons.

For stringing smilax or asparagus, for tying up chrysanthemums and other plants requiring training or stakes, no substitute has ever been put out that could quite take the place of Silkline, and there is probably more Silkline sold for florists' use than all other material together. J. C. Meyer & Co., who manufacture Silkline, have recently erected new mills on the banks of the Merrimac River at Lowell, Mass., with a very large capacity for the manufacture of sewing threads and spool silks.

From a letter just received from A. Leuthy who is at present making a business trip through the European ornamental plant districts we learn that the Ghent azalea fields give promise of an enormous stock this season. There are forty to fifty buyers on the ground including John Bader from Pittsburg and Mr. Eisele of Dreer's. Azaleas are very fine this year and prices are about as usual but palms are quoted very high in all desirable sizes and find a ready European market at those prices. The stock of Kentias is not so large as in former years. Other decorative stock generally is about the same as in other years in quantity and price.

# FLORISTS' HAIL ASSOCIATION OF AMERICA.

## Summary of Secretary's Report for Year Ending August 1st, 1908.

The Florists' Hail Association of America consists of 1520 members associated together for mutual protection, and insuring glass at the present time amounting to 29,093,556 square feet.

The total receipts for the year ending Aug. 1st, 1908, as per Treasurer's report, have been \$22,573.79.

The total expenditures as per Treasurer's report, have been \$25,722.49.

The cash balance at the close of the year is \$21,148.24, all of which belongs to the emergency fund.

138 losses representing a breakage of 133,119 sq. ft. of single thick glass, and 113,808 sq. ft. of double thick glass have been paid during the year.

1230 losses have been adjusted since the organization of the F. H. A., involving a total expenditure of more than \$125,000.

The 10 per cent. assessment on hazardous risks netted the treasury \$42.37.

The only liabilities of the Association are a few small losses, proofs of which have not yet been filed with the Secretary.

During the late financial disturbance your finance committee sold a 3 per cent. \$500 U. S. Government bond at a small premium, and by borrowing from the emergency fund, purchased three \$1000 four and four one-half per cent. bonds, at par. These bonds are today worth in the open market \$30 each more than was paid for them. The amount borrowed from the emergency fund, except \$217.77, has been restored to that fund and the deficiency is more than covered by accrued interest on bonds.

The largest amount ever expended in a fiscal year has been paid for glass broken during the year ending Aug. 1st, 1908, a large percentage of which went to the Trans-Mississippi States, in which section the weather has been unusually erratic this season.

A large quantity of uninsured glass was broken at Indianapolis, Indiana, last Spring, the F. H. A. escaping with the payment of one loss.

Notwithstanding heavy losses the Association shows a largely increased reserve fund, and a handsome balance in the emergency fund.

JOHN G. ESLER, Secretary.

PATENT APPLIED FOR

### Why My New Curved Iceless Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars incased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: Result, the driest roof ever used for greenhouse purposes.
- 4th. THE MOST IMPORTANT OF THEM ALL. The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

William H. Lutton, Horticultural Architect and Builder

West Side Ave Station (C.R.R. of N.J.) Jersey City, N.J.

you probably saw our new "SASH BAR HINGE," and the way we hinge our vent sash; if you didn't see it, or if you were not at the convention, you should not fail to write us. No greenhouse is complete or modern unless it has this improvement for top ventilation. This new hinge is one of the greatest improvements in years; it does away with shade from the headers; it prevents sash from warping or blowing off in a storm; it keeps the sash bars from sagging; it keeps ice away from header, and prevents glass from breaking; it is wonderful and it costs no more than the old way.

Now remember — the new sash bar hinge is the best thing out, and you don't want to build without it.

## U-BAR GREENHOUSES

PIERSON

DESIGNERS AND BUILDERS

U-BAR CO.

1 MADISON AVE., NEW YORK

M

ATTERS have now reached the point where Experiment Stations, Agricultural Colleges and Schools find greenhouses absolutely indispensable in their work. A recent notable instance is that of the Connecticut Agricultural College at Storrs, plan and two views of which are shown. An interesting feature and one unusual for a college range, is the vinery having a single center walk. In laying out this range, its absolute utility was the first consideration, and nothing of practicalness was sacrificed for effect; still the result is most pleasing.

Our Sectional Iron Frame Construction is in this case bolted directly to the cast iron sills which cap the masonry walls. This method of construction is somewhat more expensive than when the Guaranteed Wrought Bar Iron Posts are substituted, but for public institutions the added effect and air of durability is felt by most of the institutions to be worth the difference.

The Massachusetts Agricultural College, at Amherst, Mass., has just placed with us an order for seven new houses. Only yesterday we booked an order for the Louisiana State Agricultural College at New Orleans, for a plant laboratory, straight roofed palm house and two growing houses.

This morning's mail (August 17) brings inquiries from two more Agricultural Colleges, so you can see what the trend of things is.

We are also turning out just now some greenhouses with our new Cast Iron Bench, for the State University of Kentucky.

In all this kind of business we handle, the committees seem to have the same ideas in mind, of building the greenhouses just as enduringly as they do their other buildings, which fact, no doubt, has a good bit to do with the steadily increasing use of our Sectional Iron Frame Greenhouses.

# A WONDERFUL NEW NEPHROLEPIS

## Nephrolepis Superbissima

INTRODUCTION OF 1908

**W**E desire to call attention to this new fern, which originated with us and which we are introducing this year. It is a **very unique and distinct novelty** — as distinct from Nephrolepis Piersoni and Piersoni elegantissima as they were from Bostoniensis. It is in fact a complete break. The fronds are very heavily imbricated, the pinnae overlapping, making the fronds very dense and compact.

It differs from the other Nephrolepes not only in form, but also in color, being a **richer and darker green** — entirely different from the yellowish green of all the other Nephrolepes. The plant is very sturdy in its habit, the fronds never breaking down.

While a photograph shows a similarity to its predecessors, it is absolutely distinct, not only in the formation of the fronds and color, but also in its habit and general characteristics. It makes a much more dwarf and compact growth, the fronds being very dense, firm and rigid, and having a great deal more substance, so that it **will stand more knocking around than any other fern of this type**.

It is a sterling novelty. Experts who have seen it consider it by far **the best fern ever sent out**. It is a plant that needs to be seen to have its great value and sterling qualities appreciated. It really is not in the same class with the other varieties. It was awarded a

### ... FIRST-CLASS CERTIFICATE ...

by the Royal Horticultural society at Crystal Palace in London, November, 1907, the plants exhibited there having been shipped from New York two weeks before that time. After being exhibited in London, the same plants were shipped to Edinburgh, Scotland, where they were again awarded a first-class certificate by the Scottish Horticultural Society. This will indicate the value of the plant as a novelty, and also demonstrates in a very conclusive manner its fine keeping and shipping qualities. We have just begun shipping advance orders, and new orders can now be shipped immediately on receipt.

Fine, strong plants. 2½ inch pots, \$5 per dozen, \$35 per 100; 4 inch pots, \$7.50 per dozen, \$50 per 100; 6 inch pots, \$1.50 each, \$15 per dozen.

## The Chestnut Disease

The disease affecting the chestnut trees, first noted about New York State two or three years ago by Dr. W. A. Murrill of the New York Botanical Gardens, has become a very serious one in that locality. Dr. Murrill has studied this disease and published the results in various numbers of the *Journal of the New York Botanical Gardens*, and finds associated with it a fungus which he has named *Diaporthe parasitica*, Murr. He carried on some inoculation experiments showing that this fungus is capable of producing the disease when inoculated into healthy trees. The recent reports concerning the disease seem to indicate that it is spreading widely and rapidly, and mention is made of its occurrence in southern Connecticut in 1907 by Dr. G. P. Clinton.

Those who are well acquainted with the disease take alarming views of it and maintain that unless something unforeseen occurs to check its spread the chestnut is doomed to extinction in the Atlantic States.

There appears to have been no remedy discovered as yet for its control. When a tree is once badly affected it is doomed, and the only treatment recommended at the present time is to prune back the affected parts, a method of treatment which can only be effectual on trees slightly affected. The disease is spread by minute spores which are produced by the fungus. These are formed continually and abundantly throughout the growing season and are easily distributed by wind and other agencies.

It is reported that the European, Japanese and native Chinquapin chestnuts are also subject to attacks from this fungus. From the first we have been on the lookout for this fungus in Massachusetts and have examined a great many chestnut trees which showed considerable dead wood, and it has been reported incidentally that the disease has been found in Massachusetts but we have not been able to substantiate this report. It is possible that in the western or southern part of the State it may be found but it is safe to say the most of the State is probably free from it at the present time.

In Dr. Murrill's first paper he states that "it is possible that the conspicuous ravages of the disease about New York State are largely due to the severe winter of 1903-'04 during which many trees of various kinds were killed or injured." This statement is rather significant inasmuch as in our own State a great many of our native trees have deteriorated and died since this period, and this is due not only to root killing but to killing above ground. Among these troubles may be mentioned the so-called "pine blight" or sun scorch of the pine which is associated with the severe winter killing of roots. The decline of the ash, swamp maple, oak, butternut, and in some cases the elm and rock maple as well as white maple, together with the cherry, apple, plum and peach, dates back to this period. There has also been a large amount of dead wood found in our native chestnuts showing that they have not been in the best condition.

Dr. G. P. Clinton, of New Haven, refers to a serious trouble which affected the chestnut trees in the South in 1825, at which time a large number of chestnut trees died very suddenly, and more recent observations have shown that the chestnut does not maintain its former importance in that region.

Amherst, Mass.

G. E. Stone

## Thrips in Greenhouses

A very valuable bulletin, the result of long and careful investigation, is being prepared by Prof. A. C. Beal and will soon be ready for distribution by the Illinois Agricultural Experiment Station at Urbana. Following is a summary of the contents.

Thrips injury to cut flowers in greenhouses is a recent trouble.

Thrips are very small winged, sucking insects which lay their eggs in the green parts of plants.

The "hothouse species" were not found, but a closely related species is widely distributed.

The great damage to roses and carnations is due to the work of two common out-door species—Wheat Thrips and Onion Thrips. (*Euthrips tritici* and *T. tabaci*.)

Cucumbers are injured by Onion Thrips, *Thrips tabaci*-Lind.

Observations made show *T. tabaci* to be the most abundant species in greenhouses in autumn and winter, but that *Euthrips tritici* becomes the most abundant species in rose houses in summer. Thrips *tabaci* appear to prefer the carnation to the rose.

Eggs are laid inside the calyx of carnations, on the outside of the calyx of the rose, and in the tissues of the lower side of the leaf of cucumbers and callas.

Injury is caused by withdrawal of the sap from the cells of the petals and leaves of plants, leaving white blotches on colored flowers, causing a browning of petals of white or light pink flowers, and a gray hoary appearance to leaves.

All species are more or less sensitive to bright sunlight and generally seek shaded positions.

Temperatures at night above 60 degrees are favorable to thrips and their appearance and worst injury may be expected in the warmest parts of the house. Conditions favorable to red spider are favorable to thrips.

Thrips injury is greatest in autumn and spring and least in midwinter.

Some varieties of carnations are more subject to attack from thrips.

Fumigation is slightly more effective than sprays.

Hydrocyanic acid gas, one ounce to each 1000 cubic feet of space is dangerous to young cucumber plants but sufficient to destroy an average of 92 per cent. of the thrips.

Hydrocyanic acid gas, one ounce to each 3000 cubic feet of space destroyed alcyrodes (whitefly) but only eleven per cent. of thrips, while it did not injure the plants.

Daily sprayings with nicotine insecticide on the upper surfaces of the leaves and the spray syringed off gave good practical results. Spraying thoroughly will clean out thrips provided the plants will stand the hard syringing necessary to remove the spray.

Tobacco smoke is not a very efficient insecticide for thrips.

Sprays made with two-thirds of an ounce of any of the stronger nicotine insecticides per gallon of water gave promising results.

Nicotine is the poisonous principle in the insecticides used. Pure nicotine in very dilute solutions kills thrips almost instantly when sprayed on them.

The nicotine content is the factor determining the value of a reputed tobacco extract or nicotine compound.

One exhibitor at the Niagara Convention took orders for over four hundred dollars' worth of one line of bulbs. We do not know that this was exceptional, no doubt others did as well—perhaps better. We hope that this will reach the eye of many upon whom words extolling the business value of the S. A. F. meetings have hitherto availed nothing.

Here were ninety-five firms from all parts of the country willing to pay in the aggregate nearly \$2300 in space charges besides the heavy cost of freight and the time of their employees and when we read over the names we find a majority of them the same as recorded year after year in the past, their course undoubtedly governed by the satisfactory results obtained, while their inert, obstinate or timorous competitors stay at home and lament over the poor business conditions. It was always so and probably always will be.

We agree heartily with Mr. Burdette's views as expressed at the discussion on the conduct of the National Flower Show, at the meeting in Niagara Falls last week. Mr. Burdette represents the best promoter of the show from a financial standpoint—the daily press—and his plea that special features be given such prominence that the press agent will have something to work on should be heeded. Flowers, as such, are no longer a sensation. The modern florist store is a daily exhibition in itself and people are not going to pay for the privilege of looking at a lot of plants grouped together in a hall nor can they be aroused to any feverish interest in the routine features of competition on technical points which so absorb the grower's attention.

We take opportunity to repeat what we have heretofore maintained in these columns that any attempt, now-a-days, to run a self-supporting flower show without special features, as was possible some years ago, is almost certainly doomed. The flower show records of the past few years abound in embarrassments and bitter disappointments all because these demands have been lost sight of. "It is a condition which confronts us—not a theory."

Tariff revision is in the air and no time should be lost by the nursery, plant and bulb trade in deciding upon what they believe to be for the best interests of

American horticulture so that when the time comes, as it undoubtedly will within a few months, the legislative committee of the S. A. F. can appear before the tariff makers, sustained and upheld in their claims by the trade of the entire country. When the matter was discussed in the meeting at Niagara Falls the sentiment of those present was unmistakably in favor of a specific duty on all these horticultural products. The adoption of a specific duty would mean the importation of a better class of goods and would tend to keep low grade refuse material out of the country. It would put an end to dishonesty and collusion in invoicing shipments and relieve the trade of all the trouble, uncertainty and controversy in the appraisers' department which importers have experienced under the present system. With these manifest advantages in sight our business interests should get busy and speak out through every local and national organization so that there can be no question as to their earnestness and unanimity. If they do so they will get what they want. If they do not it may be many years before the opportunity comes again.

## British Horticulture

It was my good fortune lately to visit the seed farm of Henry Eckford. Mr. Eckford has found it necessary to augment his facilities, has now a farm in Essex, a famous seed growing county, where fifty-three acres are devoted to sweet peas. The rows placed end to end would reach a distance of 180 miles. The outlook is much more satisfactory than was the case last year. Countess Spencer, which in the early stages of its career was distinguished for its "sporting" tendencies, was seen in batches of over an acre, and every one true in type and tint. Another striking variety was Triumph, a bold bloom of shapely form of an orange pink hue. Others in the same field were Mrs. Walter Wright, the popular mauve; Unique, an excellent striped variety; Prince Edward of York, a useful scarlet, and John Ingman. Lovely was justifying its name, the pretty shade of pink showing up in strong contrast to some of the darker tints in the adjacent rows. The Queen of Spain was another variety which arrested attention, not only on account of the admirable color, but also owing to the vigorous growth. A large amount of space was devoted to Queen Alexandra, whose fine array of bold scarlet blooms provided a warm breadth of coloring over a broad area. Another popular variety was seen at its best in Henry Eckford.

### ELECTRICITY IN THE GARDEN

Details have been published of some interesting experiments which have been conducted in applying electricity to plant growth. Mr. J. E. Newman, of Gloucester, acting in conjunction with Mr. R. Bomford, of Salford Priors, has for some time been engaged in investigations, having Sir Oliver Lodge and his son, Mr. Lionel Lodge, as advisors. The method adopted is to stretch over the field to be treated a number of wires on poles, something like low telegraph wires. The system of conductors is connected at one post with a generator supplying positive electricity at a potential of something like 100,000 volts, and with sufficient power to maintain a constant supply of electricity at this kind of potential. The electrification is maintained for some hours each day, but is shut off at night: it is probably only necessary to supply it during the early morning hours in summer time, and in spring time or in cold, cloudy weather for the whole day, or during the time of the plant's greatest activity. But at what stages of the growth of a plant the stimulus is most effective has still to be made out. The results lately published state that as regards strawberries there was a 35 per cent. increase. Earlier ripening was also observed. Small plots of raspberry canes showed a marked improvement in growth, whilst tomatoes produced an increased crop. A curious point about the raspberries was that the foliage and fruit of the old canes showed no difference, but that the new growth, particular after the old wood was cut back, showed an enormous difference in favor of the electrified.

### THE FRUIT CROP PROSPECTS

According to the reports received the apple crop is appreciably better than last year, or even than in 1906. Whilst the apple crop generally is satisfactory, it appears to be very deficient in Scotland, the returns of average crops from Scottish gardens being even fewer than last year. Pears are less plentiful over the kingdom than last year, but the returns are slightly better

than in 1906. As regards plums, there are 146 returns of under average crops, whilst there are 126 correspondents who report crops equal to, or above, the average. Cherries are less plentiful than last year. Out-of-door peaches and nectarines are very deficient. The crops of currants, raspberries and gooseberries are plentiful, and this remark applies with even greater force to strawberries for out of 278 returns there are only six which record the crop as below the average yield.

*W. H. Aclsett.*

## Roses Under Glass

### SEASONABLE SUGGESTIONS

Summer is now on the wane, and as the season for firing approaches, all our skill will be required to prepare the stock to meet the change of conditions due to the transition from natural to artificial heat. Any carelessness or ignorance displayed in the administration of ventilation and water at this season will bring dire results later on. To properly prepare the stock for this change, due regard must be taken of the fact that evaporation is on the decline, and the plants cannot use, with advantage, the copious supplies of water necessary during the summer months and consequently the supply must be carefully gauged to meet the diminishing wants. Root action will also become more sluggish and, if the soil ever approaches the point of saturation, the stock will surely suffer.

As the nights begin to get chilly, less ventilation will be required, and particular care should be given to lowering the ventilation during the afternoon so that after each reduction there will be no appreciable raise of temperature. The same care should be exercised in the morning, raising the ventilators gradually as the heat increases, but never so much at a time as to lower the temperature. Fresh air is a wonderful tonic and is perhaps the true source of that beautiful dark foliage, so rich in color and firm of texture and without which we cannot enter on the short days with a fair chance of success. But like all other essentials, air must be applied judiciously and at the proper time, otherwise it is capable of working havoc and bringing our dreams of a golden harvest to a dismal end.

When the weather permits and other conditions are favorable, the plants should be given a thorough syringing in order to keep red-spider in check, as we get few opportunities to tackle them in the winter. Keeping the plants neatly tied up greatly facilitates syringing and by admitting a free circulation of air among the foliage reduces the danger of contracting any of the fungoid diseases.

Mildew is another of our constant enemies, and advantage should be taken of the first cold night to run steam and paraffin pipes with the sulphur mixture to eradicate any that may be in the house. A little persistence in this work, and care to maintain as nearly as possible free conditions, will soon cause the trouble to disappear.

*J. E. Simpson*

## AFTER ADJOURNMENT.

The current issue of our esteemed contemporary, the Country Gentleman, informs its readers that F. H. Traendly was elected president of the S. A. F., at Niagara Falls, last week. "Brother Tucker," you are "away off." And who told you there were "very scanty audiences" at Niagara Falls? We might add that the Society of American Florists was organized at Chicago, not Cincinnati, in 1884, but held its first convention in Cincinnati in 1885.

The Chicago Daily Tribune has been conducting a prize garden contest, and in its issue of August 20 published pictures of the prize winning porch and veranda arrangements, all very creditable to their owners and suggestive as to the possibilities in making beautiful homes even amid the most dispiriting surroundings. The moral disfigurement and stupidity which some men have in their make-up was illustrated in the case of one landlord who, when he saw how attractive his tenant had made his home, promptly raised the rent.

"The American Florists' Association is in session at Niagara Falls. Good, it will be rare sport to have the man who makes the price of violets fight it out with a Falls hotel keeper or hackman..." - Brockton (Mass.) Times.

There appears to be no evidence of any more attempt at extortion at Niagara Falls than might be expected at any populous centre where the convention might be located. We are glad to record this fact for Niagara proved to be an ideal place for a convention and, if the expressed opinions of many of the attendants this year have any value, it will not be long before the S. A. F. makes its appearance at Niagara again.

"The obvious lesson to be drawn from this fact (good attendance at meetings) is that a business session, conducted under strict parliamentary rules, will invariably hold an audience." - Florists' Exchange.

We don't quite agree with our contemporary as to the reason for the well-attended sessions at Niagara. First, the weather was delightfully cool and the hall comfortable at all times; second, there were few counter attractions in the place to draw away the attendants; third, the sporting contests were all relegated to the fourth day. If attendance has been unsatisfactory at any past conventions and if it be true that "a business session conducted under strict parliamentary rules will invariably hold an audience," it follows that past presidents have been either inefficient or remiss. Happily the "amendment to the amendment" fiend, as well as the hostile disturber, was conspicuously absent this year, for which President Traendly is, presumably, grateful and the "strict parliamentary rules" experienced no great strain.

Our talented correspondent, Mr. Alfred Rehder of the Arnold Arboretum, has gone away for two weeks' vacation, hence the absence of his notes from our columns. He will resume his valuable contributions on his return.

## CARNATION SPLENDOR.

This new variety was introduced last season without any great flare by Stevenson Bros., of Govanstown, Maryland, but it is very probable that the coming season will bring Splendor to the front as one of the best all around varieties of the day.

While not what is termed a fancy variety, as to size, it ranks well with such sorts as Aristocrat, Afterglow, and doing a little better than Winsor.

In color it is an even silvery pink shading between Afterglow and Win-

sor. The blooms have excellent form, with an attractive finish which has already made many friends with the buying public.

The growth is all that can be desired, being very free, starting in early to produce finished flowers on long stems and continuing throughout the season without any cropping. It is a heavy feeder and takes kindly to heavy soil.

As a grower in the field, Splendor is ideal, making a handsome shapely plant in a very short time.

LOUIS REUTER.

## ROSE CONRAD F. MEYER.

During the discussion following W. C. Barry's able paper on Out-Door Roses, a question was asked by Mr. Rudd as to whether the rose Conrad Meyer had proved to be a perpetual bloomer. Mr. Barry said that it had given some evidence that it was, but he was not prepared to positively so assert. He had found that it should not be severely pruned. A. L. Miller and Antoine Wintzer both expressed a favorable opinion of the variety. Mr. Wintzer had not found it a very free bloomer, but after being established two or three years its blooms were very fine specimens. He also liked Sir Thomas Lipton, which he stated to be almost as vigorous as Rugosa itself, producing from two to five hundred blooms on three-year-old field plants. Mr. Wintzer deprecated the fact that such an enormous number of new tea roses are being pushed on the market every year.

We find in The Garden (London) the following note in reference to the rose in question:

Rose Conrad F. Meyer not flowering satisfactorily. (C. L. A.) This Rose is apt to grow so vigorously that unless grown as a pillar plant or pegged down it will not flower very freely. You might remove a few inches from the flowerless shoots at once, but we do not think you will get many blooms from them this year; it will help to ripen them, however, and they should bloom next year. In pruning next year leave the growths made this year from 3 feet to 4 feet in length, and if necessary loop them up to sticks. Some of the growths bend over arch-like and others horizontally. Keep them about two feet from the ground. A good plan to check the exuberant growth is to lift the plants with a spade and place them again into the same position, making the soil firm about their roots. This should be done in October. This rose flowers very freely on standards, and we have had it bloom grandly this year upon the plants put out two years ago. In pruning we retain the wood almost the entire length that it made last year. Some of the plants might be trained in a fan shape upon a trellis formed with bamboo canes. The check to the flow of the sap would induce it to flower.

# SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

## The Story of the Convention Continued

In our last issue we sketched the proceedings at the Niagara Falls convention up to Thursday noon when the result of the election of officers for 1909 was announced. The report of the judges on the trade exhibition, presented on Wednesday but added to and amended on Thursday and Friday was as follows:

### Report of the Judges.

A. Cowee, Berlin, N. Y.—Gladioli; the following named varieties being especially good: Dawn, La Luna, Afterglow, War, Empire, A. Dimmock. Certificate of merit.

Herendeen Mfg. Co., Geneva, N. Y.—New sectional boiler, series 160-180; special features; removable grate bars; two-way flues system; extra deep fire box. Certificate of merit.

King Construction Co., North Tonawanda, N. Y.—New sash bar bracket iron frame ventilating sash; greenhouse truss construction. Certificate of merit. Also pipe hanger and bracket. Highly commended.

Kroeschell Bros. Co., Chicago, Ill.—Improved generator for hot water heating, increasing capacity of boiler; also, pipe coupling and improved 1910 model boiler. Certificate of merit.

Lord and Burnham, Irvington, N. Y.—New round sectional boiler; increased fire surface directly over fire. Certificate of merit.

J. C. Moninger Co., Chicago, Ill.—New ice clearing hinge, with brass pins for ventilating sash. Certificate of merit. Also honorable mention for interlocking splice.

The Standard Pump and Engine Co., Cleveland, O.—Pumps for shallow and deep wells; gas or gasoline can be used, with no changes whatever; three-way safety valve on all pumps. Certificate of merit.

E. H. Hunt, Chicago, Ill.—Cement bench construction. Certificate of merit.

The Deming Co., Salem, O.—Spraying outfit. Highly commended.

A. T. Boddington, New York.—Ferguson Combination Sprayer and Syringe.—As a sprayer highly commended.

Lord & Burnham Co., Irvington, N. Y.—New cast iron bench. Highly commended.

Madison Basketcraft Co., Madison, O.—Willow baskets. Highly commended.

Schloss Bros., New York.—French ribbon novelties. Highly commended.

The Wilson-Hoyt Co., Short Hills, N. J.—Cement bench construction. Highly commended.

Wertheimer Bros., New York.—Dewdrop chiffon and other ribbon novelties. Highly commended.

H. Bayersdorfer & Co., Philadelphia, Pa.—Novelties in florists' supplies. Honorable mention.

Camp Conduit Co., Cleveland, O.—New tile bench. Honorable mention.

Otto G. Koenig, St. Louis, Mo.—

Lock for hot bed frame corners. Honorable mention.

The Ever-Ready Flower Pot Cover Co., Buffalo, N. Y.—Ever-ready pot cover. Honorable mention.

The Heim Support Co., Connorsville, Ind.—Carnation support. Honorable mention.

Robert Kift, Philadelphia, Pa.—Improved berry and fern globe. Honorable mention.

J. A. Payne, Jersey City, N. J.—Skeleton rafter, bent-glass eave construction. Honorable mention.

F. R. Pierson Co., Tarrytown, N. Y.—Nephrolepis elegantissima compacta. Honorable mention.

M. Rice & Co., Philadelphia, Pa.—Novelties in florists' supplies. Honorable mention.

George E. Brown, Greenfield, Mich.—The American carnation support. Highly commended.

George M. Garland, Des Plaines, Ill.—Cement bench. Honorable mention.

Christ. Winterich, Defiance, O.—Defiance greenery stump. Highly commended.

The judges were Jos. A. Manda, C. J. Graham and Fred H. Meinhardt.

The exhibits of the Quaker City Machine Co., Richmond, Ind., and the A. H. Hews Pottery Company, North Cambridge, Mass., were miscarried somehow and never reached the exhibition hall. Exhibits overlooked in our list published last week were: Ellwanger & Barry, Rochester, N. Y., conifers and hardy shrubbery; S. A. Anderson, Buffalo, N. Y., Lorraine begonias; E. Hippard, Youngstown, O., Standard return steam trap; Larkin Co., Buffalo, N. Y., insecticide soaps; Wm. Moll, Cleveland, O., pipe clamp; Washington Iron Works, Buffalo, N. Y., urns and pedestals.

### Thursday Afternoon Session.

The principal subject assigned for the session of Thursday afternoon, was the National Flower Show, to be held in Chicago next November. E. G. Hill addressed the meeting at length, describing the foreign exhibitions he had attended and especially emphasizing the great advantages and benefits to be derived by the trade at large from such displays. W. F. Kasting, chairman of the general committee of fifty, gave some facts relative to the preparations already made, stating that the premium list amounts to the grand total of \$11,023 worth of prizes, of which \$2336 are special cash premiums provided by individuals and firms and \$800 is in medals and cups from similar sources, the balance being offered out of the general fund. An assessment of 20 per cent. of the amount of the guarantee fund has been collected and 30 per cent. more will soon be called for. Arrangements have been made with the customs authorities,

whereby foreign exhibits will be admitted in bond without payment of duty. J. C. Vaughan, chairman of the committee on local management, reported that it has been found necessary to cut off one Sunday in the continuance of the show and that it would close on Saturday night. He urged that intending exhibitors make early entries and thus assist the committee of arrangements in their work.

W. N. Rudd, as chairman of the premium committee, explained the difficulties experienced in making equitable allotments to the different departments and that the necessity of drawing out local displays was regarded as of supreme importance. Every rule has been carefully considered and will be rigidly enforced. Every effort will be directed to making the affair a financial success. Irwin C. Bertermann, treasurer, next presented his report and was followed by George Asmus, chairman of the publicity committee. All these reports were discussed at considerable length. R. Vincent, Jr., being called upon gave a brief account of the shows he visited on his recent European trip, mentioning as particularly interesting the old-fashioned flowers which are there given prominence. His comment was that in this country we are too extensive and not sufficiently intensive. Mr. Burdette urged the necessity of providing for exhibits of a character sufficiently sensational from a public standpoint to furnish material which the press agent could use to advantage.

At this session a congratulatory telegram was received from A. J. Lovelless, president of the Chrysanthemum Society of America.

### Friday Morning Session.

The meeting on Friday A. M. opened with an address on "School Gardens," by L. C. Corbett, of the Agricultural Department, Washington, D. C., which we hope to publish in a later issue of HORTICULTURE. The discussion which followed was very interesting. E. V. Hallock, F. R. Pierson, H. S. Adams and others taking part, with approving comment. Mr. Pierson paid a fine tribute to the Department of Agriculture for its willingness to help in the school garden movement and urged that we must get the objective in education rather than the theoretical with which we have been surfeited heretofore. The co-operation of the Department means much for the success of the movement. Superintendent Chas. H. Keitsch then presented his report on the trade exhibition, showing that there were ninety-five exhibitors occupying about 10,000 sq. ft. of space. The receipts had been about \$2265, and expenditures \$1650, leaving an approximate profit for the society of \$615.

Albert T. Hey then read his paper

on "State Florists' Associations and Their Relation to the S. A. F." Mr. Valentine spoke in approval, especially of the suggestion of supporting and working through the county fairs for interesting the people in floriculture.

H. B. Dorner next addressed the meeting on "What the State of Illinois Is Doing for the Florist." Mr. Dorner is connected with the horticultural department of the State College at Urbana. He described at length the outfit that has been provided for research in the various phases of horticulture and valuable experiments with fertilizers for florists' crops. It is the aim to build up an efficient school of floriculture. The prescribed studies in addition to the regular college courses are soil physics, including rotation of crops, etc., botany, entomology, general horticulture, landscape gardening, the principles of evolution, commercial floriculture, exotics for outdoor work, etc. He extended a cordial invitation to all to visit the college, where they will be accorded a glad welcome.

George E. McClure was scheduled to read a paper at this session on "Planting for Winter Effect in the Northern States," but a delay in arrival of the train from Buffalo prevented his appearance in time to present the paper and a vote was passed ordering its publication.

Mr. Hallock then claimed the floor and proceeded to present to President Traendly a splendid case of solid silverware as a token of esteem from his friends in the Society. Mr. Hallock voiced in well-chosen words the appreciation of the members for the faithful and just manner in which the president has fulfilled his duty as presiding officer. He said that what is invisible, in the hearts of every member, was the best part of the gift, far exceeding its intrinsic value. President Traendly briefly accepted the token, pleading his inability to find words to express his gratitude. He said he did not feel that he had done much but had done the best he could and coupled the thanks of Mrs. Traendly, who was not able to be present, with his own.

The report of the judges appointed to examine and make the awards on the prize essays sent in last year was presented by Wm. J. Stewart. The report stated that five essays had been submitted but that the committee did not consider any of them worthy of the amounts appropriated and recommended that a first prize of \$10.00 be given for the essay by J. Austin Shaw and two second prizes of \$5.00 each for those by Amelia Shaw and Irwin Bertermann. The report was accepted and recommendation adopted.

#### Friday Afternoon.

The afternoon was most enjoyably spent. The bowling cohorts started early for Buffalo eager for the fray, scheduled to take place at the Palace Bowling Alleys. The rest of the party, numbering several hundreds, enjoyed a sail up the Niagara River, as guests of W. F. Kasting and other hostable friends of the Buffalo Florists' Club. A lavish lunch was served all through the trip, which lasted about four hours, short stops being made at a number of pleasure resorts. Two steamers were used for the excursion,

about half the party proceeding on one boat to Buffalo to see the bowling and the rest returning to Niagara Falls. It was a most delightful ending to a week of unalloyed pleasure.

#### REPORT OF THE COMMITTEE ON HORTICULTURAL EDUCATION IN THE PUBLIC SCHOOLS.

(Presented by F. R. Pierson, Tarrytown on Hudson, New York.)

At the request of Mr. E. V. Hallock, Chairman of this Committee, I submit the following report on behalf of the committee:

At the last annual meeting of this society, held in Philadelphia, the question of horticultural education in the common schools was discussed at length, and as a result, a committee was appointed to take up this work. At the Congress of Horticulture, held at the Jamestown Exposition in September of the same year, this question was again discussed at length, and a committee was also appointed by that body, consisting of Dr. A. C. True of Washington, D. C., Director of Experiment Stations, United States Department of Agriculture, Mr. E. V. Hallock, and myself.

The suggestion was made at Philadelphia that effort should be made through the legislature of the various States to establish a system of school gardens; but it seemed wiser to the committee to endeavor first to interest the Department of Education in this subject before appealing to the legislature.

The committee appointed by the Congress of Horticulture met at Cornell University, Ithaca, on June 19, 1908, and, after considerable discussion, adopted a tentative course of study to be presented to the Educational Department of the State of New York; and a conference was arranged with Dr. A. S. Downing, Assistant Commissioner of the Department, August 3rd.

At that time, the matter was discussed at length, and the committee was pleased to find that the Department received favorably the suggestions made. Dr. Downing stated that said suggestions were in line with the policy already adopted by the State, and, finally, requested the committee to draw up a course of study for the consideration of the Department, stating that they would take up the matter and go into the necessary details as soon as a new syllabus was issued, which would be the following year.

The idea of the committee was to emphasize especially the necessity for elementary education in horticulture in our graded and common schools, in connection with the school garden idea, making it an interesting and instructive course of study, combining botany, nature study, etc., teaching the children to observe and love nature. This horticultural course should be made exceedingly simple and practical, and should combine the school garden idea with the adornment of grounds surrounding the school buildings, interesting the children in their environments. They should be taught what can be done with the most unattractive surroundings, and, at the same time, be given a general knowledge of horticulture,

especially making the acquaintance of their native grasses, trees, shrubs, vines, and flowers. Where the grounds permit, planting should be done under the direction of competent teachers, so that they will become generally well acquainted with our common plants—something which is practically lacking today, even among the best educated people. And another aspect of the case that appeals to the committee is, that by interesting the children in their surroundings, a higher standard will be raised in their minds regarding the ownership of property, which would result in inculcating the right idea in regard to property rights, thus making better citizens of the boys and girls who attend our schools, who are really the warp and woof of our commonwealth.

While the work of the committee was especially to secure such a course of study in the common schools, it felt it wise to advocate a complete course; and it was suggested that at least two special horticultural and agricultural schools should be established for special courses in these branches,—one situated in the eastern part of the State and one in the western part—the one in the east to specialize more particularly in horticultural subjects, and the one in the west in agricultural and pomological subjects. These special secondary high schools would then become feeders for Cornell University.

It seems to the committee very necessary that such a comprehensive plan should be adopted, as at the present time, Cornell University is obliged to take practically unprepared students, which compels it to do the work that secondary schools should do. The special horticultural and agricultural schools could then do much of the preliminary work that Cornell is now obliged to do, leaving it free to teach the higher and more scientific work, which is its legitimate field.

The establishment of these schools, however, would be a matter that would come before the legislature, and steps looking toward that end will be taken in due time. The special effort of the committee at present, however, will be to secure the incorporation of a definite course of study in the elementary and graded schools.

While much has already been done in New York State in this direction, the present syllabus leaves too much to the discretion of the individual teachers, who perhaps have little knowledge of the subject. What the committee desires is to secure a definite, systematic course of instruction, incorporated in the syllabus, so that it will not be optional, but as much a required study as mathematics, English, and the other common branches. The committee has considered it wiser to concentrate its efforts, and has selected New York State as the field of operation, and, if this effort is successful, after a definite course has been adopted by the State of New York, the committee will then appeal to the other States.

#### Report of the State Vice-President for Maryland.

The year 1908 will long be remembered as one of difficulties of various kinds all along the horticultural line.

Early in the winter the wave of financial depression struck Baltimore and of course the florists had to suffer first, which meant low prices for flowers, while expenses went merrily along. During the spring the rainy weather interfered with planting out, to be followed with no rain during June and July, causing a drought during which the weeds even refused to grow, consequently there are many small carnation plants being housed which have a tendency to keep the supply down somewhat early in the season. Roses are in fine shape.

During the past year Maryland has made great strides towards becoming a horticultural center. The South especially recognizing the fact that nowhere else can better roses, violets, carnations, etc., be secured than through the Baltimore Florist Exchange, which is the main distributing point for the growers and the leading factor in making Maryland horticulture what it is, handling fully four-fifths of all the wholesale cut flower trade of the state.

Very little has been done in the line of building, the general aim being to make the present facilities produce more and better results than the past. Although the bedding out season did not commence until late, causing some apprehension of the final results, as far as we can learn the business done was up to the average, and nearly all available stock disposed of. Quite a few new estates are being planted and building up of the suburban districts is creating an increased demand for this line of stock.

Maryland is again at the front with a grand new rose in John Cook's "My Maryland," which is destined to rank among the best standards of the future. Stevenson Bros.' new carnation Splendor promises to be pennant winner. Maryland claims the best and largest collection of geraniums and in dahlias will rank second to none in the country.

The Baltimore Gardeners' Club and Maryland State Horticultural Society are in flourishing condition.

Fred Bauer has been experimenting with Harrisii lilies and having obtained some wonderful results may be expected to be heard from in the near future.

The State Good Roads law passed by the legislature carries with it an appropriation of one million dollars for improvement of the roads throughout the state.

RICHARD A. VINCENT,

State Vice-President.

#### SOME NEW GLADIOLI.

In the big exhibit of gladioli by A. Cowee at Niagara Falls were the following sterling novelties: War, scarlet; Peace, pure white with peacock feather mark in throat; La Luna, creamy white with wine color throat marking; A. Dimmock, mottled pink and yellow; Dawn, salmon with orange throat; Afterglow, salmon with bluish throat; Blue Jay, blue with white and yellow in throat; Victory, yellow; Empire, scarlet. These are all Groff seedlings. Princess Alteri, pure white with carmine throat and Lady Howard De Walden, canary with carmine markings in throat, both Lemoine productions, were also much admired.

## During Recess

### THE CONVENTION BOWLING CONTESTS.

The S. A. F. bowling games were held as per schedule at the Palace Bowling Alleys, Buffalo, on Friday P. M., August 21. The arrangements were excellent and very much to the credit of the committee, George W. McClure, E. A. Slattery and Rowland Cloudsley who had worked very hard to make the event a success.

#### Team Contests.

The W. F. Kasting cup for highest single game was won by Philadelphia, score 846. The Whildin cup for highest total in three games and the Traendly cup for same, were won by Buffalo, score 2278. The Michell trophy for second highest in three games was won by New York, score 2254. The scores of the remaining teams for the three games were as follows: Washington, 2176; Philadelphia, 2160; Baltimore, 2137; Cleveland, 1990; Detroit, 1974.

Highest individual game in team contest, J. S. Fenrich (N. Y.), 210. Highest individual total in three team games, R. McLennan (Wash.), 538. Greatest number of strikes in three team games, C. L. Seybold (Balto.). Greatest number of spares in three team games, W. Robertson (Phila.). The Brunswick-Balke-Collander Co. diamond medal for individual championship of the S. A. F. was won by C. L. Seybold (Balto.).

### ELBERON (N. J.) HORTICULTURAL SOCIETY.

The first annual outing and clam-bake of the above society was held on Wednesday, August 12th, at Port-au-Peak Woods (Shrewsbury River). One hundred and fifty in all, mostly gardeners with their families, enjoyed a very fine day. The entertainment committee, N. Logan, W. Robertson, James Kennedy, H. Wood and A. Bauer, worked very hard to make it a success, and won the society's thanks for their well-directed efforts.

Several very exciting games were played and some valuable prizes were presented to the lucky winners. The base ball game between the Monmouth Horticultural Society and Elberon Horticultural Society was a very exciting contest. The score stands 5 to 5—a tie, and no prize was awarded. Monmouth won the tug of war. Fifteen ladies ran in the 50-yards' ladies' race, and Mrs. Metzendorf of Oceanic captured the first prize. In running-hop-skip-and-jump Jos. Hennessy was the winner.

A. BAUER, Sec'y.

The Gardeners' and Florists' Club of Boston will have an outing at the New England Nurseries, Bedford, Mass., on Saturday, Sept. 5.

#### CORRECTIONS.

In Seed Trade Notes, issue of August 15, the last word but one at the foot of the column, should be "quantities" instead of "qualities".

In Mr. Koehler's article on A Kalmia Plantation in Maine, Page 205, in fourteenth line, second column, read nine hundred plants instead of "one hundred."

A correspondent calls attention to an error in our account of the exposition at Gand, wherein our notes wrongly placed Gand in Holland, instead of Belgium. We plead guilty.

# NEWS OF THE CLUBS AND SOCIETIES.

## AMERICAN ROSE SOCIETY.

Pursuant to call made through the newspapers, a meeting of the American Rose Society was held during the session of the Society of American Florists and Ornamental Horticulturists. The business in hand was the formal change of officers. Mr. Robert Simpson of Clifton, N. J., turned over the office to Mr. August Poehlmann of Morton Grove, Ill. Mr. Simpson has been president for two terms during which the exhibitions at Washington, D. C., and Chicago were held. Vice-president Philip Breitmeyer of Detroit was succeeded by Mr. Wm. F. Kasting of Buffalo, N. Y., in which city the annual exhibition of 1909 will be held. Treasurer Harry O. May of Summit, N. J., and the present secretary continue in office. The Executive committee is as follows: J. J. Curran, Salem, Va.; P. J. Lynch, West Grove, Pa.; Peter Bisset, Washington, D. C.; P. Welch, Boston; A. Farenwald, Roslyn, Pa.; Philip Breitmeyer, Detroit; E. Gurney Hill, Richmond, Ind.

Mr. Simpson made a brief statement of the condition of the society showing an audit of all accounts up to June 10th, at which time the financial statement showed a lack of funds to close up the year. The habit of the past was by necessity to carry over certain charges. This the Executive committee took in hand to remedy. The difficulty in the past was that the cash prizes, independent of special prizes awarded regularly by the Society, reached an amount nearly equal to if not more than the revenue, leaving nothing to cover the necessary administrative expenses and these had been paid by the officers. The members who made good the amount are: J. A. Valentine, S. S. Pennock, Ellwanger & Barry, Henry Hentz, Jr., P. O'Mara, Vaughan's Seed Store, Carl Jurgens, Aug. Poehlmann, Joseph Heacock, Robert Simpson, Samuel Thorne, E. G. Hill, Alexander Montgomery, Patrick Welch, Gude Bros., Conard & Jones, Benjamin Hammond and others.

President Poehlmann in a clear cut address showed at once his ability as an executive officer and promised to do all in his power to extend the Society's usefulness. The following resolutions were adopted:

That the Society offer its medals and certificates as may be directed by the Executive Committee at its Annual Exhibitions.

That the Secretary be, and is hereby directed to publish the Annual Bulletin of the proceedings of the American Rose Society for the past year, and is also authorized to solicit a limited number of advertisements, and to print 1000 of the Bulletins.

The appointing of judges for the approaching National Flower Show was taken up and certain names suggested by request of President Poehlmann to whom the matter was referred. These gentlemen will be notified and as soon as their acceptance is assured the list will be published. Mr. Otto G. Koenig of St. Louis, Mo., joined the society as a new member.

BENJAMIN HAMMOND, Sec'y.

Fishkill-on-Hudson, N. Y., Aug. 24, '08.

## MASSACHUSETTS HORTICULTURAL SOCIETY.

The free midsummer show of this society held on Saturday and Sunday, August 22 and 23, was a most gorgeous affair. The great exhibition hall fairly blazed with thousands of gladioli, phloxes, asters, lilies and herbaceous flowers of every sort, and the small adjoining hall presented a display of choice fruits and luxuriant vegetables in rare assortment and perfection.

B. H. Tracy put up a collection of gladioli such as has never been equalled here for variety and for size of spike and bloom. One section of 100 vases filled for effect took first prize in that class and honorable mention was awarded to his Dawn and Mme. Butterfly. Another extensive gladiolus display came from John Lewis Childs in which the superb America and many varieties of the Childs strain were prominent. R. & J. Farquhar & Co. were represented by a huge collection of herbaceous flowers, dahlias and auratum lilies, which filled one entire end of the hall with a wave of gorgeous color. In the collection were two novelties, the Chas. Lanier dahlia and a new lily collected by Wilson in Northern China.

Perennial phloxes were of superior quality, and made a big display, T. C. Thurlow, Blue Hill Nursery, W. Whitman and George Hollis winning first, second, third and fourth respectively. Francis Skinner, Mrs. John L. Gardner and Wm. Whitman were the winners in the China aster classes. Superb displays of herbaceous flowers were made by Bellevue Greenhouses, Blue Hill Nurseries, F. J. Rea and others, and there were promiscuous groups from Mrs. E. M. Gill and other regular contributors to these shows.

A first-class certificate of merit was awarded to Walter Hunnewell for hot house peaches, variety Sea Eagle. In the melon competition H. H. Rogers, gardener James Garthly, won first with Farquhar's Honey-Drop, Frederick Mason, gardener E. L. Lewis, second with Tip Top and third with Long Island Beauty.

## CANADIAN HORTICULTURAL ASSOCIATION.

As recorded in our issue of last week, this organization held its eleventh annual meeting at the Clifton House, Niagara Falls, Ontario, at the same time as the S. A. F. convention in Niagara Falls, N. Y. Cordial visits were exchanged between the two bodies, mention of which has also already been made. The routine proceedings, including addresses by the Mayor of Niagara Falls, President Walsh and reports by the various officers, took place on Wednesday, August 19. On Thursday papers were read on Forcing Tomatoes, by W. S. Blair; Care of Private Greenhouses, by William Wilshire; Nomenclature, by John Cavers; Grapes Under Glass, by Thos. Pewtress. On Thursday evening the officers for next year were elected as follows: President, Ed. Dale; first vice-president, H. E. Philpot; second vice-president, J. Connors; secretary, A. H. Ewing; treasurer, H. Simmers; exec-

cutive for three years, Ed. Annandale, James Collins and W. Walker; for two years, C. H. Janzen and Mr. Upton. It was voted to hold the next meeting at Toronto at the time of the chrysanthemum show.

## NEW ORLEANS HORTICULTURAL SOCIETY.

The regular meeting of the New Orleans Horticultural Society held on Thursday P. M., August 20, was well attended. Messrs. DeLapouyade, Doersch and Eichling were appointed a committee to act with the Southern Florists who will give a trade exhibit in conjunction with the Horticultural Society's chrysanthemum show. A Finance Committee was also appointed consisting of Messrs. Otto Abele, Otto Werner and Chas. Eble. The committee in charge of the chrysanthemum show reported progress.

## FLORISTS' HAIL ASSOCIATION OF AMERICA

At the annual meeting of this association on August 18 officers were elected as follows: President, E. G. Hill; vice-president, H. H. Ritter; treasurer, Joseph Heacock; secretary, John G. Esler; directors, J. C. Vaughan and J. A. Valentine. The directors voted to raise the bond of the treasurer from \$5,000 to \$25,000 and proposed an amendment to the by-laws providing that in future the bond of the treasurer shall not be less than the average amount in bank during the previous year.

## CLUB AND SOCIETY NOTES.

At the last meeting of Dracut Grange, Lowell, Mass., James McManmon, florist of that city, gave an interesting talk on plants.

Mr. J. Guille, Portsmouth, Va., will address the Florists' Club of Philadelphia at their September meeting; subject, "Bulb Growing in Virginia."

The Indiana Horticultural Society met at Greenfield on August 20 and 21. Considerable attention was given to the treatment of San Jose scale.

The Douglas County Horticultural Society met with A. H. Griesa, Lawrence, Kansas, on August 15, and E. B. Cowgill was the speaker of the day.

The Tri-City Florist Club met with Henry Pauli, Davenport, Iowa, on August 13. The handling of cold storage bulbs was the subject under consideration. The next meeting will be with Harry Bills on September 3.

The New Jersey Horticultural Society held its meeting on August 19 with Albert Repp of Glassboro. State Entomologist J. B. Smith, H. W. Collingswood and Prof. M. J. Blake were among the speakers. Dinner was served to nearly five hundred people in one of the big barns.

The Montreal Horticultural Society has just awarded the prizes in the garden competition and the list of winners has been published. Classes were for city gardens, suburban gardens, back yard gardens, and "special cases." The judges were Joseph Bennett, George Trussell and C. A. Smith.

### OUT-OF-DOOR ROSES.

(A Paper Read Before the Society of American Florists by W. C. Barry, Rochester, N. Y.)

In consenting to prepare a paper on "Out-of-Door Roses" for the 24th Annual Meeting of the Society of American Florists, I must admit that I did so with consideration, realizing full well that my statements, observations, and conclusions would be subject to the consideration and criticism of experts.

Your fame for rose growing under glass is world wide. You have achieved a reputation of which not only you who are directly engaged in this business, but our countrymen as well, may be proud. This happy condition is the result of hard work, serious study, and long practice on your part. Aiming to grow the best, you have adopted and pursued methods which have accomplished the end. Your practice has been commended and followed by workers in other countries. Each year you have made advances, and your ability has been amply demonstrated in the careful selection of varieties which you have adopted for forcing. It would be an easy matter to blunder seriously in this regard, but your judgment has been tried and found to be wise and correct.

I premise my remarks with these statements because you have justly won a high place in floriculture, and I am among the number of those who believe that your pursuit is so commendable, beneficial and elevating in its aims and influence, that it should be justly valued and your achievements should have the recognition and appreciation which they deserve.

I have been invited to consider a subject hardly in line with your work and you may feel that I am occupying your time unprofitably, and yet I know and appreciate your great love for the Queen of Flowers. The Queen of Floral Beauties has been uppermost in your mind for years—you have thought about her, dreamed about her, exerted your best efforts in her behalf and your success in every case has been most gratifying. In the Floral Kingdom are to be found innumerable beautiful and choice subjects each one possessing charms peculiar to itself, but among the vast number the rose has been accorded the highest place. To her we bow. To her do we exclaim in endearing tones, "Your charms of color, and form and fragrance are unequalled. We recognize your incomparable beauty, and as loyal subjects we vow to do all in our power to secure a better and higher appreciation of your virtues." With this in mind, I trust you will not feel that I am wasting your time, but that you will cheerfully lend your attention, for a brief period, while we consider together as lovers of the Rose, what may and should be done to forward the movement of Out-of-Door Rose growing in this country.

We have, I know well, in many sections, a climate so severe that Rose culture is extremely difficult if not impossible, and yet I can truthfully say that that territory is of small extent. In the Southern States Rose growing is comparatively easy. In the North we will confess that it is somewhat difficult, that is, Roses grown in the North need some protection in

winter such as hilling up with earth or covering with evergreen boughs, or both. The care and attention required to carry out these important details are often neglected and disappointments and discouragements follow. With the introduction and employment of the Hybrid Teas more care than ever must be taken in this particular. In addition to the covering referred to a shelter of boards to shed the water is recommended for the more tender varieties.

Roses should always be planted in a place and in a manner which will permit of their being protected. By this I mean that instead of scattering in the plants here and there in the garden, border, or lawn, I suggest planting them together in beds, groups or masses; not in the most conspicuous place in the grounds, but rather at the side, or in the rear, or in an inclosure, with a hedge about them, the idea being that the plants may not be too prominent when out of flower. I think many planters err in this regard frequently. Rose gardens large and small have their place, but surely it is not in the front yard or in the most conspicuous part of the lawn. The ever blooming sorts like Baby Rambler, Killarney, Gruss an Teplitz, Testout, Kaiserin, Cecile Brunner, Baby Dorothy, White Cochet, Pink Cochet, Clothilde Soupert are such continuous bloomers that they may be excepted and planted where they may be seen to advantage all summer long, but most varieties should be planted as I have suggested. If quantities of bloom are desired, then the plantation should be on a large scale in the rear of the grounds, setting the plants in rows and beds with grass walks between them. This arrangement is practical and ornamental. In large places a garden should embrace one thousand plants at least and in smaller places a proportionate number. The amateur even cannot expect to get satisfactory results from a few plants. We must be generous in our plantings. The soil cannot be too good or too rich. If planted in good garden soil and manured heavily with well decayed manure I can predict with utmost certainty that the result will be satisfactory.

The Rose in good soil grows wonderfully, escapes diseases, and insects, and looks well having ample foliage. Whenever possible means for watering the plants should be provided, and a liberal use of water will produce a marvelous effect. Water can be easily and cheaply conducted to various parts of the grounds in small iron pipes laid on the surface. This is better and cheaper than rubber hose. The expenditure in this direction will insure not only the health of the plants but render them capable of producing blooms continuously.

#### Budded and Own Root Plants.

Some planters will have nothing but own root plants because of disappointments and success in growing the stock, whether it be Manetti or Briar, rather than the variety of Rose sought. Growing the stock has given a black eye to rose culture and it is difficult to persuade those who have once been disappointed to repeat their efforts with budded plants.

In general budded roses are the most satisfactory, because the plants are stronger at the start and they continue so. They produce more and larger blooms, and if they are watched and the suckers removed when they appear, no trouble will ensue. How to distinguish the stock from the budded variety is not by any means difficult if pains be taken to study the difference. On request any gardener will cheerfully point out to the amateur the points of distinction and when once they are recognized and understood, no difficulty will be experienced. But there are many who will insist on having own root plants and I believe their wishes should be respected.

#### Diseases and Insect Foes.

I will not take your time mentioning remedies for the control of disease or the destruction of pests, but I will say that if the plants are maintained in a healthy condition by stirring the soil, watering frequently, removing blooms, and diseased foliage, they will not be troubled seriously. Weakly plants are the victims of insects and diseases and it is the duty of every rose grower to furnish ample nourishment health. It is a mistake to conclude that rose culture is unsatisfactory, if not impossible, because of insect pests and diseases.

#### Pruning.

If there is one cause more important than another for the failure of roses, we would attribute it to faulty pruning or perhaps to an entire lack of pruning at planting time. Thousands of roses are planted annually without being pruned at all, either the tops or the roots and consequently fail and the seller has to take the blame. At planting time it is absolutely necessary that this operation should receive attention or loss will ensue. Dormant plants should always be cut back to two or three eyes when set out and in this way growth is insured. Each year thereafter in the Spring they should be cut back to two or three eyes. Some varieties need hard pruning, others moderate pruning.

#### Out of Door Roses.

For growing out of doors beginning with the hardiest, those adapted to the severest climates and requiring the least care and attention I would name the Japan Roses *rugosa* and their hybrids. Extra hardiness is the distinguishing and most valuable character of this family although their showy and handsome foliage and fruit are almost as important qualifications. The single red and single white varieties are quite well known and have been extensively used for shrubberies, hedges, as well as single specimen plants. *Atropurpurea* is a very beautiful single, bearing maroon crimson flowers. Mrs. Anthony Waterer having semi-double deep crimson fragrant blooms in clusters, has special value. Agnes Emily Carman with semi-double crimson flowers is one that has been planted quite largely—being much esteemed in some places. Madam Georges Bruant bearing large, double white flowers in clusters is a beautiful rose as is *Blanc Double de Coubert*, a large and showy double white form of *rugosa alba*. This will be prized by all on account of its large well formed blooms. Conrad F. Meyer of recent introduction is a rose with a great fu-

ture. The flower is very large, well formed, of a silvery rose color and highly petalated. Continuous flowering may be added to the list of its good qualities. Of still later introduction is Nova Zembla, equally free flowering and with well formed bloom of a pearly white color. Parfume de Hay produces carnation red flowers and is delightfully fragrant. The musosa roses are really shrubs possessing great vigor and their foliage and fruit are so handsome that they are beautiful at all times. No roses that I am acquainted with are so generally useful, possessing as they do so many valuable qualities. They should be very popular and may very justly be styled, "The Rose for the Million."

#### Hardy Climbing Roses.

Climbing roses rank next in value for general use as they can be employed advantageously in so many different ways to cover buildings, pergolas, arbors, summer-houses, as well as to hide unsightly objects, and to make them attractive. In all grounds of large and small extent, there are opportunities for their employment and when used they quickly transform an objectionable or unattractive view into an interesting and delightful picture. It is simply a case of accomplishing much with a little effort and at small expense. If climbing Roses were planted as frequently as they should be, many old and unsightly buildings would be changed into things of striking beauty. The truth of this statement will be verified when touring through the country we see on every side opportunities for the improvements I suggest. Crimson Rambler introduced some years ago from Japan became popular at once and has been widely disseminated. Dorothy Perkins, Lady Gay, and Farquhar—pink varieties, are recent introductions of the highest merit, all three are distinct and should be included in a collection. Rubin yields ruby red flowers in great profusion. Hiawatha, a new sort, bearing large, single, scarlet flowers with golden centers is one of the most remarkable varieties yet introduced, and it will undoubtedly become the greatest favorite of them all. The flowers are produced in great clusters, are wonderfully durable, and appear in mid-summer. To call it a grand new rose of the greatest value is not praising it too highly. Leuchstern a German introduction producing large single, cineraria like flowers in bunches, bright rose with large white eye, is novel and interesting.

Tausendschon or a Thousand Beauties is one of the latest additions to this family. It bears abundantly very large flowers for its class, of a pale pink color and it bids fair on account of its size to become greatly esteemed. Helene, Queen Alexandra, Waltham Rambler and Wedding Bells are also desirable kinds. Each one has merits of its own, and I might add several others but the list would be too extended.

What picture could be more beautiful to look upon than an arbor or pergola covered with these roses, the branches hanging over in festoons and bearing thousands of blooms. I do not think we appreciate how valuable climbing are for the embellishment of

buildings and garden structures, and how beautiful and attractive we can make our homes with them. The latest novelty is one called Trier, a pale pink rose, small, almost single and borne in large clusters. It is said to be the first of a new race of Roses valuable on account of its being constantly in bloom.

#### Hybrid Perpetual Roses.

The so called Hybrid Perpetual Roses constitute the main reliance for blooms for garden and house decoration. If they were perpetual their value would be greatly enhanced, but as it is there is nothing to take their place. They do not flower as long as we could wish, but when in bloom there is nothing that equals them, hence they are valued more than any other Roses. The old and well known General Jacqueminot is still a favorite on account of its vigor and hardness. M. P. Wilder has beautiful, well formed, rich dark red blooms, and delicate fragrance, and Mrs. John Laing is almost perpetual, and bears profusely blooms of a beautiful pink shade. Frau Karl Druschki is a new white, extremely floriferous and almost perpetual, and although only brought to notice a year ago has already attained the distinction of being called the best hardy white rose. Paul Neyron, the Peony Rose, is so large as to command attention everywhere, notwithstanding its coarseness. If cut when in bud or partly open it is admirable and it should never be omitted from the garden. Ulrich Brunner is a red rose very valuable for cutting as the flower is showy and the stem is free from thorns. Earl of Dufferin is a velvety crimson rose of perfect form, has a delightful fragrance, and is in every respect an exquisite rose. American Beauty which does so well under glass does not succeed out of doors. I regret to say. Clio is a large flesh colored rose, shaded with rosy pink, a most delightful combination rendering it a general favorite. Baron de Bonstetten is one of the best very dark Roses,—a good flower, produced abundantly and it justly deserves a high place in a collection. Other meritorious varieties are Magna Charta, Captain Hayward, Francois Michelin, Mad. G. Luizet, Marchioness of Londonderry, Margaret Dickson and Prince Camille de Rohan. Hugh Dickson, a crimson rose sent out a year ago, gives promise of great value. I might enumerate many other H. P.'s which should be grown but I will not make the list too long.

(To be continued.)

#### ABOUT IRIS.

On page 67 of HORTICULTURE, John Thorpe writing under the above heading concludes his article "Somebody, some day, will write a popular Iris Book."

May I say that the best and cheapest book I know of is, "The Book of the Iris" by R. Irwin Lynch. It is one of the series of "Handbooks of Practical Gardening." Over 200 pages of text and a number of process illustrations are given.

BAMBOO STAKES**

## Seed Trade

Freezing weather in the northwest causes great anxiety for the corn crop, especially in view of the present fine prospect. It is confidently asserted by good judges that two weeks more of warm weather would have placed field corn beyond the danger zone, excepting in the altogether improbable event of a sudden drop in the mercury half way to zero. Sugar corn in the west, and in fact everywhere, is late, and warm, favorable weather throughout the month of September is needed to properly mature it for seed, and a bright, warm autumn will be required to cure it, else there will be a repetition of last year's unsatisfactory seed—low vitality and disappointing germination.

Reports from North Dakota and the Canadian northwest indicate serious damage to spring wheat, and what little corn is grown in those sections has probably been put out of service. According to reports, the mercury dropped to 7 below freezing in North Dakota and 9 below in British Columbia. This is a radical reversal of form in the matter of temperature from a few weeks ago, when the mercury stood at 95 and even as high as 105 in the shade. These must be fine climates for "infants and invalids."

Onion seed harvesting is proceeding in California, and early predictions of a large yield seem to be amply sustained, notwithstanding a last final effort from that section to create a contrary impression.

Vine seed crops are in the same category as corn, and are in imminent danger of being ruined. This is particularly true of muskmelons. Reserves carried from last year are very small as a rule, and of many of the leading varieties there are absolutely none, therefore, a crop failure this year would mean famine prices and no mistake. There are considerable reserves of squashes, watermelons and cucumbers, and a partial crop failure on these lines would have a tonic effect on prices without proving a great hardship.

There are many reports that market gardeners have allowed a large part of their bean crops to mature for seed, because they could not be sold at a profit in the green state. This is undoubtedly true of some districts, but just how general it is cannot be stated at this time. Attention was called to these reports some time ago, and if they prove correct, will certainly affect the demand for seed beans, and be an important factor in determining prices later on.

The seed bean crop is late, however, and an early frost would play havoc with it, therefore every bushel of beans raised by market gardeners may be needed. A week or two more will tell the story.

The fact that green beans have been so abundant has not apparently cheapened the price to the consumer to any appreciable degree, which suggests poor methods of distribution and in fact they are. There is little

doubt that if the farmers who raised the beans, and the consumers could have been brought together, it would have been greatly to their mutual benefit. All the apparent surplus would have been consumed, and the farmers would gladly have disposed of it at reduced prices which would have been within the reach of all but the really poverty stricken. Every year thousands of dollars' worth of fruits and vegetables are thrown away or allowed to waste in the vicinity of New York, simply because the consumer and distributor do not get together. Our methods of distribution are still very primitive and have made little improvement in fifty years. Transportation of course has vastly improved, but that is not distribution. Whoever can perfect a practical plan of distribution, that is simple and workable, and will bring producer and consumer together, and particularly the city consumer, will confer a boon on his fellowman.

T. J. Grey of Boston is spending a week in Nova Scotia, combining business and pleasure.

N. J. Olson Co., of Minneapolis, has purchased the business of John Costain at Fargo, N. D. Dwight Simmons of Fargo will be manager.

### PUBLICATIONS RECEIVED.

Proceedings of 26th Annual Convention of the American Seed Trade Association, held at Detroit, Mich., June 23, 24 and 25, 1903, including a Topical Index of Annual Reports from 1883 to 1907 inclusive and the Proceedings of the Congress of Horticulture, at the Jamestown Exposition, Sept. 23, 1907. This makes a volume of 265 pages filled with matter of vital interest to the trade whose interests this Association works so hard to protect. The frontispiece is a fine portrait of ex-president George F. Green.

"Hand Book of Cultural Notes on Roses and Other Interesting Items," by Frank P. Brigham, Lockport, N. Y. This is a little pamphlet of 16 pages, concise and practical in every line; not a superfluous word in it. Its dedication is as follows:

"This little book is dedicated to 'The Rose', the queen of flowers, and I hope it will be of some little service to any and all growers into whose hands it may fall."

It treats on the care of roses under glass only. Some of the topics are Compost Heap, Planting, Tying, Cutting, Mulching, Airing, Spraying and Watering, Cultivating, Holding Over, Firing, Eel Worm, Thrips, Don'ts, House Cleaning, Prolonging Life of Greenhouses, etc.

Fifty-fifth annual report of the Massachusetts State Board of Agriculture, together with the 20th annual report of the Massachusetts Agricultural Experiment Station. This is a document of great value to anyone interested in agricultural development on modern intensive lines and in its completeness and thorough consideration of the topics of most vital interest to the welfare of those engaged in the tillage of the soil and other rural pursuits is an appropriate addition to the long list of publications of a similar character which the State of Massa-

chusetts has given her citizens. Among the contents most interesting to the horticulturist are papers on Market Gardening, by Prof. H. F. Hall; Breeding and Raising Garden Seeds, by W. W. Tracy; Massachusetts Fruit Trees and Their Insect Foes, by Dr. H. T. Fernald; Report of Committee on Gipsy Moth, Insects and Birds; Plum Culture in Massachusetts, by Prof. F. A. Waugh; Greenhouse Pests and Their Control, by Dr. H. T. Fernald, and Statutory Bird Protection in Massachusetts, by E. H. Forbush.

### CATALOGUES RECEIVED.

Wm. Elliott & Sons, New York.—Autumn Wholesale List of Selected Bulbs and Seeds for Fall Sowing.

J. M. Thorburn & Co., New York, N. Y.—"Thorburn's Bulbs," 1903. A selected list of varieties for fall planting.

C. C. Morse & Co., San Francisco, Cal.—Illustrated Folder of New Spencer Sweet Pea Selections. Nine of the finest varieties are offered.

S. G. Harris, Tarrytown, N. Y.—Summer Supplement to General Catalogue of Plants, Shrubs, Roses, Trees and Spring Flowering Bulbs.

Conard & Jones Company, West Grove, Pa.—New Floral Guide, Autumn 1903. Cover illustrations in colors are Peony Edouard Andre and tulips.

Weeber & Don, New York City.—Catalogue of Bulbs, Roots, Seeds, for Fall, 1903. The title page is adorned with a fine bunch of lily of the valley, in green and white.

Ionis Pottery Company, Ionis, Mich.—Catalogue of Florists' Wire Designs. A unique publication in that it illustrates not only the wire forms but the completed floral work.

Frantz De Laet, Contich, Belgium.—General list of Cacti and other succulents. This useful and very comprehensive list is profusely illustrated with beautiful half-tone engravings of cacti in bloom.

Wm. Baylor Hartland & Sons, Cork, Ireland.—Rare May-Flowering Tulips, Narcissi and Daffodils. A handsomely illustrated catalogue in which are listed, in addition to the standard varieties a number of new seedlings of Irish origin.

**POT GROWN STRAWBERRY PLANTS**  
Set in August and September will give a full crop next June. Our new method of growing them gives fine roots. C. S. FRATT, Reading, Mass. Send for Catalogue.

**EASTER LILY BULB PROSPECTS.**

The crop of Azores Longiflorum is being delivered short this year and the percentage of 9 to 11-inch bulbs will not run more than 10 per cent. of orders. This is owing to dry weather and to conditions similar to those in Bermuda this year.

Seitaro Arai, Yokohama, writes under date of August 2nd that the digging of Multiflorum and Longiflorum has begun and that there are many doubles and triples and the singles have grown from 1 to 11-4 inches smaller than usual. It would therefore appear that the crop is not as good as expected. Some growers planted Giganteum in the rice fields last fall and as a consequence many Giganteums have rotted; the quantity estimated lost on this account is between 500,000 and 600,000 exportable bulbs. Some are so entirely rotted that they they will not leave any form of bulbs under the green lily plant. Those planted on elevated ground and in the mountainous localities are very much better. From this information crop prospects are not very encouraging and short deliveries would not be unexpected.

**FREIGHT RATES FROM JAPAN.**

The Japanese exporters are somewhat troubled over the freight market to this country and write that the conditions are unsettled and they fear higher rates. It is likely they have been unable to make their usual contracts owing to the recent ruling of the Interstate Commerce Commission in this country, compelling the railroads to publish their rates, thus abolishing the through rates in connection with the Pacific steamship companies. If the overland freight rates are raised it will greatly affect the selling prices of Japanese lily bulbs, which weigh very heavy in the aggregate.

The Chamber of Commerce Reports at Yokohama as follows: "The exports of lily bulbs as edible food is fast increasing. The total export during last year reached over 500,000 yen in value. The sale this season is expected to show some increase compared with the previous year."

Edible bulbs are chiefly speciosum and especially the variety magnificentum Ed.

### NEWS NOTES.

D. M. Andrews, collector and grower  
of Rocky Mountain shrubs and flowers,  
has more than doubled his plant, se-  
curing a very choice piece of land a  
few miles from Boulder, Colo. Mr.  
Andrews has done much to bring the  
treasures of the Rockies to public  
notice.

H. R. Mosnot, of Denver, Colo., has  
purchased Mauff's greenhouses at  
Westminster, a Denver suburb. With  
these he has forty acres of good land  
under ditch. Mr. Mosnot proposes to  
put in a large collection of ornamen-  
tals, peonies and perennials, to supply  
the mountain regions.

C. S. Harrison's Select Nursery, York,  
Neb., has outgrown the strength of  
the proprietor and he has sold a half  
interest to H. S. King. They have  
doubled their plant and are securing  
control of many novelties including  
several of Harrison's new productions.  
We understand they have associated  
with a leading peony grower and can  
now draw from a peony collection of a  
quarter of a million. They will carry  
on both wholesale and retail business.  
As located also with this nursery is  
the Elmwood Select Nursery, under  
the care of Frank Brown at Paynes-  
ville, Minnesota.

## NEWS NOTES.

Auction sales of stalls in the two flower markets in Boston, are announced for August 29, each at the same hour, viz., 9 a. m.

Cyrus A. Smith, who has been in the florist business at Putnam, Conn., for forty years, has disposed of his stock at auction and retired from business.

S. P. Donaghy, of New Bedford, Mass., while working in his greenhouse August 19, was struck by a falling section of pipe, and received a severe scalp wound.

J. H. Morton, superintendent of Mt. Hope Cemetery, Boston, has resigned from that position, following an investigation into the sale of some land to the city by Mr. Morton. The investigation showed nothing to Mr. Morton's discredit and the trustees so declared by a unanimous vote. The mayor, for some reason which does not appear, disagreed with the trustees on the matter and Mr. Morton, satisfied that he had been fully vindicated by the vote of the trustees, sent in his resignation. Four or five gentlemen well-known in the florist business are mentioned as candidates for the vacancy thus created. Mr. Morton is not likely to have any difficulty in locating himself in an equally lucrative or better position elsewhere but his going away will be a great loss to the horticultural fraternity of Boston by whom he is held in the highest esteem. He is an ex-president of the Gardeners' and Florists' Club.

Mr. Morton was presented on the evening of August 20 with a silver loving cup and easy chair at his home by seventy of the cemetery workmen.

Mr. Morton has always been a great favorite with his men. All the employees of the cemetery gathered at the cemetery stables and marched to the home of Mr. Morton.

The affair was a complete surprise and Mr. Morton was deeply affected by the tribute. He responded most feelingly, and following came an evening of song and fun.

Walham, Mass.—Home Garden Association, September 19.

## OBITUARY.

Patrick H. Meehan.

Patrick H. Meehan, a well-known rose grower, passed away this week at his home in Philadelphia. For the past two years he had been in charge of Charles E. Meehan's greenhouses in Germantown. He was widely acquainted in various parts of the country, having worked for Harvey & Co., Richmond, Va.; F. H. Kramer, Washington, D. C.; Joy & Son, Nashville, Tenn.; Myers & Santman, Wyndmoor, Pa.; Dingee & Conard Co., West Grove, Pa., and the Good & Reese Co., Springfield, O. He was an enthusiastic raiser of seedling roses, many of which have found their way into commerce. Two of his most successful varieties are Robert E. Lee and Wyndmoor.

Clarence Peniston.

We regret very much to report the death of Mr. Clarence Peniston, of Hamilton, Bermuda. Mr. Peniston was one of the first growers of Harrisii and was held in very high esteem by all those who knew him.

## INCORPORATED.

King-Thurman Nursery Co., Kalispell, Mont.; capital, \$10,000.

## FLOWER MARKET REPORTS

Monday of each week of **BOSTON** late has brought some little activity to the wholesale markets, but by Tuesday or Wednesday the ripple has disappeared and stagnation is the order for the balance of the week. As compared with previous years, the present summer season is a disappointment. At present the market is overloaded with small, third-class roses, which are sold as low as 25 cents a hundred, and are taken by the street fakir, who loudly proclaims them at ten cents a dozen. They are a bad feature and the growers would serve the trade and themselves if they would keep them at home, as they flood the market with undesirable stock, and a large part of them cannot be disposed of at any price. American Beauty of good quality is in active demand. Comet asters of high grade are now beginning to come in, with flowers after the similitude of chrysanthemums and stems two feet long, but the price they bring—about one-third of last year's figures—is not enough to pay for growing them, and is no encouragement for the effort to produce high-class stock. Gladioli are abundant but, as usual in this market, Shakespeare has the call, and other varieties sell both low and slow. Carnations begin to appear. A few White Perfection are in evidence, of excellent quality, but the majority are pretty miserable stock, dear even at the price they bring—fifty cents a hundred.

The cooler weather has **CHICAGO** had a stimulating effect on trade. Flowers are coming in in better condition. Carnations show little improvement yet and are practically supplanted by asters. Asters are in the market by the thousand with stems from eight to fourteen inches long, and sell slowly for fifty cents to one dollar per hundred, while an occasional dealer has large blooms on stems from thirty to forty inches which sell for five and six dollars. The supply of outdoor flowers, with the exception of asters and gladioli, is diminishing, and in consequence roses are more in demand. Beauties have now good stems, and other roses are selling much better than early in the month.

The summer quiet **INDIANAPOLIS** still prevails and conditions seem likely to stay this way until the middle of September when the social season begins. We have reason to expect nice business from this source as soon as the season opens. The early asters are past and the late asters have not yet arrived and there is quite a skirmish among the retailers occasionally in securing stock to fill orders. Some very fine Beauty and Kaiserin roses are coming in but other roses retain the "last rose of summer" appearance. The lilies of various tribes and the gladioli are now the most decorative features of the retail stores. Green goods are in fair demand and supply. Some dahlias are coming in but do not sell well.

There is little to record in relation to the cut flower market other than the old story of tedious stagnation which has been the rule all through this summer. The present spell of cold weather should help a little by shortening up the crops and by inducing people to flock back into the city, where it is to be expected they might be disposed to recall the fact that florists exist. It cannot be said that any one thing is selling well. Some things do not sell at all, even to the street fakirs.

**PHILADELPHIA** Saturday was the only really good trading day last week, and was a welcome surprise. Gladioli, with the exception of America, lost ground, there being far too many of the dark colors. Asters abundant and draggy, especially in the lower and medium grades. Really fine asters were in good demand but scarce. American Beauty roses were promptly cleared, and some days there was hardly enough stock to fill orders. Good Kaiserins sold well but there was an overflow of undergrade stock. New crop Brides and Bridesmaids are coming in sparingly. Nothing extra as to quality so far. Some very good Killarneys are arriving. Orchids very scarce. Beacon and Afterglow carnations are the best of present indoor crop. Excellent outdoor Crockers are a welcome feature. There are a few straggling dahlia shipments. First week in September is quite early enough for these. Easter lilies are in unusually good demand.

### NEWS NOTES.

John Clark, florist, Cohasset, Mass., has filed a petition in bankruptcy; liabilities, \$1770.

H. M. Totman, Randolph, Vt., is installing a Wittbold watering device and adding a cooling room.

The greenhouses on the estate of Frederick N. Goddard, Roslyn, N. Y., were destroyed by fire August 18.

The Lamphrey greenhouses, East Brookfield, Mass., will be opened for business at an early date, and carnations will be a specialty.

### PHILADELPHIA NOTES.

J. Otto Thilow's motion to keep the general public from the trade exhibits of the S. A. F. except on one afternoon went through enthusiastically, as it should. At Atlantic City the public was excluded except on the Thursday afternoon, when a charge of 15c. was made, not for gain, but to keep out the mob. While disarming the adverse criticism of a total embargo, it showed the S. A. F. was an educative as well as a business proposition.

Philadelphia only came in third at the convention bowling. That is disappointing in a way, and yet it may be all for the best, as a team that wins first all the time soon freezes out enthusiasm in the game. We doff our caps to Buffalo and New York.

Walter Fancourt has been appointed horticulturist for the National Farm School, Doylestown, Pa., his duties commencing Sept. 1st. Lectures and demonstrations on indoor and outdoor gardening are a part of the curriculum. Mr. Fancourt is exceptionally well fitted for this post, both from a practical and scientific standpoint.

Mr. McClements of Randolph & McClements, Pittsburg, and Harry L. Holmes of Harrisburg, Pa., were recent visitors.

Robert Buist was a guest at Fordhook on the 21st inst. The trial grounds were inspected to the enlightenment of both guest and hosts, as the shrewd comments of one of the Nestors of the seed trade were eminently worthy of noting, and even a Nestor when in an amiable and receptive mood can learn something in these extensive and up-to-date experimental grounds.

Howard M. Earl left on the 22nd inst. on a hurry call west. Expected back on the 29th inst.

### BUSINESS CHANCES.

Wm. F. Snyder succeeds the Savage Floral Co., at Hopkinsville, Ky.

John V. Lavelle will take possession of the store at 704 State street, Erie, Pa., at an early date.

Until his new building is ready for occupancy at 823 Manhattan avenue, James J. Reddy will carry on business at 117 Greenpoint avenue, Long Island City, N. Y.

# POTASH

**Gardening For Profit**  
is an impossibility unless the soil contains, in addition to its other plant-growing elements, a sufficient supply of Potash.

Abundant leafage, wealth of bloom, hearty growth of stock, and superiority of flavor and firmness of fruit are assured by the application of commercial fertilizer in which there is from 10 to 12 per cent. of Potash.

Send for our valuable books on fertilizing, prepared by experts, and invaluable to gardeners and fruit growers. Sent free on application.

PATENT APPLIED FOR

### Why My New Curved Iceless Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars incased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: Result, the driest roof ever used for greenhouse purposes.
- 4th. **THE MOST IMPORTANT OF THEM ALL.** The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

William H. Lutton, Horticultural Architect and Builder  
West Side Ave Station (C.R.R. of N.J.) Jersey City, N.J.

## DO RESULTS COUNT?

If they do, then that settles it — the U-Bar is *the* construction, simply because the more light, the more and better the flowers — and no construction is as light as the U-Bar. But it doesn't stop there, for its durability is carefully looked after, and for grace of lines and general attractiveness, you must admit its distinct superiority. It is all told about and thoroughly illustrated in our catalog. Send for the catalog.

# A WONDERFUL NEW NEPHROLEPIS

## Nephrolepis Superbissima

INTRODUCTION OF 1908

**W**E desire to call attention to this new fern, which originated with us and which we are introducing this year. It is a **very unique and distinct novelty** — as distinct from Nephrolepis Piersoni and Piersoni elegantissima as they were from Bostoniensis. It is in fact a complete break. The fronds are very heavily imbricated, the pinnae overlapping, making the fronds very dense and compact.

It differs from the other Nephrolepes not only in form, but also in color, being a **richer and darker green** — entirely different from the yellowish green of all the other Nephrolepes. The plant is very sturdy in its habit, the fronds never breaking down.

While a photograph shows a similarity to its predecessors, it is absolutely distinct, not only in the formation of the fronds and color, but also in its habit and general characteristics. It makes a much more dwarf and compact growth, the fronds being very dense, firm and rigid, and having a great deal more substance, so that it **will stand more knocking around than any other fern of this type.**

It is a sterling novelty. Experts who have seen it consider it by far **the best fern ever sent out.** It is a plant that needs to be seen to have its great value and sterling qualities appreciated. It really is not in the same class with the other varieties. It was awarded a

### ... FIRST-CLASS CERTIFICATE ...

by the Royal Horticultural society at Crystal Palace in London, November, 1907, the plants exhibited there having been shipped from New York two weeks before that time. After being exhibited in London, the same plants were shipped to Edinburgh, Scotland, where they were again awarded a first-class certificate by the Scottish Horticultural Society. This will indicate the value of the plant as a novelty, and also demonstrates in a very conclusive manner its fine keeping and shipping qualities. We have just begun shipping advance orders, and new orders can now be shipped immediately on receipt.

**Fine, strong plants. 2 1/4 inch pots, \$5 per dozen, \$35 per 100; 4 inch pots, \$7.50 per dozen, \$50 per 100; 6 inch pots, \$1.50 each, \$15 per dozen.**

## Notes from the Arnold Arboretum

With the autumn advancing the number of flowers is diminishing perceptibly in our shrubberies and there are only very few which begin to flower at this time; the most conspicuous of them are some Clematis. The native *Clematis virginiana* is in bloom since some time and is particularly attractive when rambling over low shrubs and covering them with masses of white faintly fragrant flowers which are followed later by attractive feathery fruits. A similar species just coming into bloom is the Japanese *C. apiifolia* with more finely cut leaves and somewhat smaller flowers. The most showy, however, of all the late flowering Clematis is the Japanese *C. paniculata* which has become very popular and deservedly so, for its hardiness, rapidity of growth, handsome foliage and abundant white flowers make it an ideal vine for porches, fences, arbors and similar objects.

The Japanese *Callicarpa japonica* and *C. purpurea* are now in bloom, but their axillary flower clusters, pale lilac in the first and purple-lilac in the second species, are rather insignificant and moreover partly hidden by the foliage. Both are low shrubs not perfectly hardy in this climate, and usually killed to the ground in winter, but young shoots spring up freely again and flower and fruit the same year.

The slender pendulous or trailing branches of the Matrimony Vine, *Lycium halimifolium* and *L. chinense*, are studded their whole length with lilac flowers and here and there a few scarlet berries appear which become later the chief ornamental feature of this shrub.

Besides these shrubs some already mentioned in earlier issues are still in bloom and of these may be named *Sophora japonica*, *Hibiscus syriacus*, *Vitex incisa*, *Lespedeza bicolor*, *Hypericum* and *Tecoma* and *Kerria japonica* is showing its bright yellow double flowers for the second time.

While the number of flowering shrubs is growing small, the wealth of ornamental fruits is now very great and at the Arboretum the eye is greeted at every turn by conspicuous and handsome fruits shining from among the foliage which retains still most of its summer freshness, though here and there particularly in the Red Maples a touch of autumnal coloring appears.

Among the trees there are none more beautiful than the Mountain-Ashes with their large clusters of bright red fruits. The earliest of them is the European *Sorbus Aucuparia*. A remarkable variety of it is *S. Aucuparia* var. *moravica* (var. *dulcis*) with larger fruits of a pleasant subacid taste; this variety has been recommended for mountain regions as a fruit tree, for its fruits can be made into a very good jelly resembling cranberries in taste. The native *Sorbus americana* is equally beautiful, but still handsomer is the variety *S. americana* var. *decora* with larger fruits ripening somewhat earlier. This variety has been confused by most botanical writers with *S. sambucifolia* which, however,

is a different species native to northeastern Asia and not found in North America at all.

*Magnolia tripetala* is now a very attractive tree with its pink fruit-cones among the bright green foliage; the fruit will look still prettier when it is fully ripe and releases its scarlet seeds hanging down for a while suspended from slender threads before they fall to the ground. Also the fruits of the shrubby *Magnolia glauca* are assuming a red color, but they are smaller and less conspicuous.

Among the shrubs the High-bush Cranberry, *Viburnum Opulus*, is certainly the most showy with its large nodding clusters of brilliant scarlet fruits. *Viburnum Sargentii* which is of more dense and upright habit produces its smaller fruits usually rather sparingly, but this year some shrubs fruit very well and are almost as beautiful in fruit as *V. Opulus*. *Viburnum dilatatum* also has scarlet fruit but much smaller and disposed in upright corymbs; it is a compact shrub well worth a place in our shrubberies as well for its flowers as for its fruits. The large fruit clusters of *Viburnum cassinoides* are now mostly greenish or pinkish white changing to pink and soon to their final blue-black color; sometimes fruits of all three different colors may be seen in the same cluster. The lustrous dark blue fruits of *V. venosum* are very similar to those of *V. dentatum* which by this time have mostly fallen off or been eaten by birds. *Viburnum pubescens* is also attractive with its numerous dark purple-black fruits.

The Kinnikinnik, *Cornus Amomum*, is attracting attention by the unusual blue color of its fruits appearing abundantly in nodding long-stalked clusters. It resembles very much *Cornus obliqua*, but ripens its fruits later and the leaves are broader and larger. The European *Cornus mas*, the Cornelian Cherry, is very handsome with its scarlet oblong fruits glistening from among the dark green lustrous foliage, while the dull black fruits of the European *C. sanguinea* are rather inconspicuous.

The Sweet Elder, *Sambucus canadensis*, stands bowed with the weight of its large clusters of purplish black berries and in this state is almost, though not quite as effective as in June when it is in bloom.

The Black Chokeberry, *Aronia melanocarpa* (*Sorbus nigra*), is now adorned with its lustrous black fruits which drop soon after ripening while the closely related Purple Chokeberry, *Aronia atropurpurea*, bears dark purple or purplish black fruits remaining on the branches though in a shriveled state almost through the whole winter. The latter is a larger shrub reaching ten to twelve feet in height, while the Black Chokeberry remains lower and sometimes is a dwarf bush only one or two feet high. The Red Chokeberry ripens its fruits much later.

Some of the Roses are handsome with their brightly colored hips; the earliest to ripen their fruits are *Rosa blanda*, *R. rugosa* which has the largest hips of all, and *R. pratincola*, while *R. virginiana* (*R. lucida*) and *R. humilis* follow a little later. All these have bright red hips, but *R. spinosissima*, one of the prettiest in bloom, bears lustrous black fruits.

Alfred Rehder.

"There is a tide  
in the affairs  
of men"

Now begins the fall season. The road to success stretches away in front of each one of us and it is now full time to take up the course, bearing in mind that standards have again advanced and that the coming "top-notchers" are bound to outstrip last year's pace as last year spoiled the records of its predecessors. Steadily, notwithstand-

ing all the business depression, has our profession been advancing in numbers, and in intelligence and business capacity, individually and collectively. We have better greenhouse and nursery equipment today than ever before; finer stock and more of it will be grown this season than ever before, and he who plans to hold his relative position with his fellows must take all these facts into the reckoning. The distance between top-grade and lowest grade stock grows wider and wider and in like manner, as the standard advances the gap grows also between the men who handle the stock—between the man who goes in bound to surpass and the laggard who knows nothing beyond old conditions and old ways. Where do you get on?

The attitude of  
the express companies

The complainants against the  
alleged discrimination by the  
Express Companies in hand-  
ling flower shipments made

out a good case at the hearing in the S. A. F. Convention and we believe that, especially as regards the heavy charges for ice used in packing flowers, the Interstate Commerce Commission will look upon the complaint as a just one. It has been predicted that the Express Companies would take every possible opportunity to punish the florist trade for their audacity in demanding and their success in getting relief last year from the retaliatory oppression from which one section of the country was suffering and recent developments would seem to indicate the fulfillment of the prediction. However nobody should lose any sleep in worrying over this impending danger. The argument that it is better to submit to abuse rather than incur greater severity by resistance is not worthy of attention. When convinced of the justice of one's case such timidity is little short of cowardice. That the Express Companies are conscious of their own weak position is evidenced in the lame and almost childish excuses they fall back upon. Insist on a "square deal."

"Standard"  
flower pots

So unmistakable has been the advantage  
to the trade in the general use of the  
standard flower pot adopted by the So-  
ciety of American Florists some twenty

years ago that it is greatly to be regretted that certain manufacturers, especially in the West, have begun to work from special moulds of varying pattern, as was stated at the Niagara Falls Convention. If, as is maintained by some plant growers, the Standard Pot is clumsy and hard to use in decorative work and hence open to improvement in one or more respects it might be well for a special committee to take up the subject and gather all possible information and suggestions from those who have been using the pots to any extent. Then if it should appear that there is a general desire for modification in the adopted patterns the Society and the manufacturers can govern themselves accordingly. Moulds are expensive and the potteries are not likely to change them very often and then only on the urgent demand of their customers. Once a pattern becomes generally acceptable to the growers it is hardly probable that any manufacturer will be so rash as to persist in turning out odd goods and the fact that this is being done would seem to indicate that the growers are not all agreed as to the present standard.

## Shade Trees

There are very few people who have not had occasion, in one way or another, to feel an appreciation for shade trees. However, the most of us should have more than this casual appreciation. We should know more of the tree's life history, more of its physical properties; the adaptability of certain varieties for certain conditions and above all wider knowledge of the species and varieties with which we come in contact from day to day. Some of us are content to make an appeal for trees for no other motive than that of the esthetic—the sentimental appeal. This does very well in some communities but it does not affect the business man. The love of nature, of art and things beautiful cannot be fostered in every mind. It may be stored there somewhere but to bring it out the practical side of the thing proves its discovery. It is often the question of dollars and cents to the individual or the city. If that cannot be shown the tree enthusiast generally gets a shock. Before our cities, towns and villages here in the South pay the necessary attention to street trees other values than that of the beautiful will have to be felt. If those who now give little attention to trees could find it practicable to visit towns and cities in the South made famous by their trees and parks a great proportion of the present indifference would be eliminated.

When a man finds that his property is worth from \$100 to \$1,000 more today than it was a dozen years ago owing to the growth of one or several beautiful trees on it, he appreciates the tree or trees, without doubt. The owner may have never given his trees a thought until this cash value idea forced itself upon him. How much greater would his appreciation have been for those trees if he had learned to feel them a part of his home and an asset to his everyday happiness?

Trees, then, must have more than a few appealing features to arouse general interest and when these are enumerated it will be plainly seen that they have. In passing along a city street during the hot summer months with the mercury at 95 degrees in the shade haven't you often sought the spot shaded by a noble tree, where the direct rays of Old Sol, either beating down direct, or reheated by reflection from buildings, are intercepted? Have you not lifted your "straw" from your sweltering brow and offered up a little inward prayer for this same tree?

Then again we find that trees prove to be sanitary agents. Through their leaves poisonous gases, which are apt to prevail in congested districts, are absorbed. Where civic and village improvement societies have accomplished results, this fact may not at once appear significant but in many towns that the writer has visited where garbage, etc., has been allowed to remain in the streets until a kindly rain has washed it away, every agency which would tend to eliminate the foul, poisonous odors would certainly seem a blessing. Tree roots absorb superfluous water which would otherwise make our basements and cellars damp and unfit for the storage of fruit and vegetables. Soil aeration is another factor to thank roots for. The opposition will say that tree roots often displace curbs and walks, yes and pavements. Why? Because these same trees were not properly planted. No root can penetrate some of the hardpans found near the surface of many of our streets. Before putting in permanent walks, where beautiful trees exist it would pay towns and cities to see that the tree roots are going to have ample room to develop in penetrable soil.

The Southern cities, towns, villages and plantations famous for their trees, too little appreciate what nature has done aided by man. There is little done to compensate, and hand down to posterity, the blessings they are at present enjoying. The trees should be watched like children. Over in France the city of Paris spends thousands of dollars in supporting a Tree Hospital. Trees are sprayed, fertilized, pruned, replaced when beyond their usefulness and protected in every way possible from injury. The whole city takes a living interest in its trees. They are proud of their well-shaded avenues.

Our American cities are not far behind. In Pennsylvania and New Jersey the cities are enabled by statute to appoint shade-tree commissions to take care of the shade-trees on their streets. They can set out new trees and assess the cost to the property benefitted. They trim trees, protect them from injury, clean out decayed trunks and fill the holes with cement and wage war against the insect pests. In fighting the latter, spray mixtures not only keep the insects in check but also preserve the foliage of the tree for the season and thus maintain its health and vigor.

We cannot lay back and let Dame Nature take care of our beautiful trees. They will not last forever unaided and not even then. It is our duty not only to ourselves but to those who follow to protect the trees we already possess and provide others for coming generations,—living monuments of a thoughtful people.

*P. F. Williams*

*Alabama Experiment Station, Auburn, Ala.*

## British Horticulture

THE SHREWSBURY SHOW

The annual show held by the Shropshire Horticultural Society maintains its premier position. The "Shrewsbury show" holds a high reputation throughout the country and the one held last week showed no diminution in the interest aroused. Keen competition was witnessed in most of the classes. The champion fruit display was a great attraction, the exhibits being of a highly meritorious character. Each collection consisted of thirty dishes of ripe fruit in not fewer than ten distinct kinds. The champion silver cup was taken by N. F. Barnes, gardener to the Duke of Westminster. In the grape section, usually a strong feature, the first prize fell to J. H. Goodacre, gardener to the Earl of Harrington, who scored 107 out of a possible 124 points. There was a spirited contest in the class for nine dishes of vegetables. The championship fell to E. Beckett, V. M. H., gardener to the Hon. Vicary Gibbs. Awards of merit were made to the following exhibits: Silver leaf antirrhinum, Thos. Taylor, Blackpool; perpetual-flowering pink, "Progress," C. H. Herbert, Acock's Green, Birmingham; white border-carnation, "Mrs. Tom Coulthwaite," Peter Blair, Trentham Gardens, Stoke-on-Trent; gladiolus, "Golden Measure," Kelway & Sons, Langport; cactus dahlia, "Sentinel," Dobbie & Co., Rothesay; carnation, "Mrs. Chas. Russell," Chas. Acock, Blundellsands; H. T. rose, "Lena," Alex. Dickson & Sons, Newtonards, Ireland.

*W. H. Adsett.*

### AFTER ADJOURNMENT.

Complaints have reached us from several parties who have ordered goods from M. H. Rose, 16 Macomb street, Detroit, Mich., whose advertisement they saw in HORTICULTURE but who have never received the goods ordered nor the money which they had enclosed. We should like to know of any others who have had dealings with the party in question or who can inform us as to his present whereabouts.

The Castle Company reports an instant wave of popularity among the greenhouse men who have seen it, for the new boiler tube coupling which they have just begun to manufacture. On Saturday last, orders were received for one circulator, one boiler and two hundred couplings. The party ordering the couplings had previously tried to use packed joints, but unsuccessfully. Within the past week inquiries have been received from as far West as Columbia River and as far South as Birmingham, Ala., and orders for electric circulators were received from New York and New Jersey. Thomas Roland of Nahant is about to install a Castle boiler and electric circulator. This business is all credited to advertising in HORTICULTURE.

### A TRIBUTE TO J. H. MORTON.

Editor of HORTICULTURE:

Dear Sir—Referring to your note on page 295, issue of August 29, regarding Mr. J. H. Morton, former superintendent of Mt. Hope Cemetery, it should be stated that Mr. Morton is an ex-president of the Association of American Cemetery Superintendents, to every member of which he is endeared by reason of his kindly personality, and by every member of which he is respected because of the dignified and efficient part he has played in the affairs of this Association, and by reason of his high attainments in a professional way.

Yours very truly,  
W. N. RUDD.

### ANEMONE CORONARIA.

See Cover Illustration

For brilliancy of color no flower surpasses this free-blooming spring subject. The tubers, planted in the fall, and given the protection of some leaves or litter through the winter, will bloom abundantly from spring to early summer. They are found occasionally in the florists' stores in the winter, but are not forced for the market in the quantities that they merit. They can be planted in pots and pans and stored in cold frames and brought in as wanted throughout the season, and with their splendid colors of scarlet, blue, purple and white are very useful for table decorations and other purposes. They are grown very extensively in southern France for the flower markets of northern Europe, from January 1st on through the winter months. There are several named varieties, of which one of the most useful is the *St. Brigid* or *Irish* anemone, bearing brilliant flowers, mostly semi-double and excellent for cutting.

### A DOUBLE FLOWERED AURATUM.

In large importations of *Lilium auratum* from Japan a wide variety of forms are always found, some almost pure white with a few delicate spots, others with the spots more pronounced, some with a faint golden line through the petal and others with more or less intense band of yellow, until we get to the *Vittatum Rubrum* type with broad band of deep color almost crimson, and heavily spotted with bronzy crimson. Fasciated stems are not infrequent, and specimens have been seen bearing from thirty up to one hundred and fifty flowers. A variation not before observed, as far as we are informed, is shown in the illustration.

where a well-built double flower has been produced. Whether it will hold this character permanently remains to be demonstrated, but this would seem to be a possibility, as a double-flowered variety of *L. tigrinum* has long been common. If, by doubling or any other process a variety of *auratum* should be evolved wherein the powerful odor of this gorgeous flower is eliminated or considerably modified, it will be a great boon for the florist as the overpowering fragrance is an insurmountable obstacle to its use in any indoor decorative work. The flower illustrated came from the nurseries of R. & J. Farquhar & Co.

### AN ACKNOWLEDGMENT.

At the close of the S. A. F. convention at Niagara Falls the exhibitors presented Superintendent Chas. H. Keitsch a testimonial of appreciation of his efficient and courteous management. As circumstances at the time did not permit of an adequate expression of his feelings, Mr. Keitsch desires to do so now through the columns of HORTICULTURE in grateful acknowledgment of the gift.

### SOME SELECT DAHLIAS.

In the window display of R. & J. Farquhar & Co., Boston, the following named dahlias of recent introduction were noted as being especially beautiful. *King Leopold*, peony-flowered, primrose; *Queen Wilhelmina*, peony-flowered, white; *Hollandia*, peony-flowered, deep pink; *Fire Rain*, decorative, scarlet vermilion; *Chas. Lanier*, show yellow. All of these are worthy of a place at the very top of the list. Charles Lanier is enormous in every feature, and every bloom is an exhibition flower, full to the heart.

## NEWS OF THE CLUBS AND SOCIETIES.

## NORTH SHORE HORTICULTURAL SOCIETY.

The annual summer exhibition of flowers, fruits and vegetables of the North Shore Horticultural society, was held in a large tent on the grounds of the Essex County club, Manchester, Mass., on Wednesday and Thursday, Aug. 26 and 27. While the rain all day Wednesday and the inclement tendencies of the weather on Thursday were responsible for a smaller number of entries than usual, and caused a poor attendance on both days, the quality of the exhibition was far superior in many instances to the shows of previous years.

A very pretty setting to the rest of the display did the three big groups in the center give. In the very center was the group of foliage and flowering plants from Mrs. Lester Leland, Eric Wetterlow, gardener. This was very imposing and won Mrs. Leland the silver cup. On the other end was the group of ferns from Mrs. Edward S. Grew, A. E. Parsons, gardener. This took first in the class, a beautiful silver cup. Mrs. Leland's group on the opposite end of the tent took second prize, a silver medal.

A feature of the show was the collection of vegetables entered by Mrs. Gordon Abbott. It was not only the best display shown this year, but one of the finest if not the finest ever exhibited here. Mrs. Abbott, William Irwin, gardener, won the special prize offered by Thos. J. Grey Co. for the best collection of vegetables, and also the corresponding special offered by Schlegel & Fottler Co. Schlegel & Fottler Co. also offered a special prize for the best collection of tomatoes and Mrs. Abbott won this, too.

The silver cup offered by George R. White for the best and largest collection of vegetables, limited to two society tables, was won again this year by Mrs. Philip Dexter, James Salter, gardener, who thus became the possessor of the trophy, as it had to be won twice before becoming the absolute property of the exhibitor. Mrs. Dexter also won the special prize offered by Joseph Breck & Sons for the best collection of sweet corn.

The gold medal offered by the society for the best table of flowers arranged for effect was won by Mrs. H. L. Higginson, James Scott, gardener. Mrs. G. E. Cabot won in the class for the best vase, arranged for effect.

B. Hammond Tracy had a splendid exhibition of gladioli occupying four tables.

## MASSACHUSETTS HORTICULTURAL SOCIETY.

The annual children's exhibition of the Massachusetts Horticultural Society will be held at Horticultural Hall, Saturday and Sunday, Sept. 5 and 6. Displays of the products of the children's gardens from many cities and towns in Massachusetts will be made and the occasion will be one of unique interest. Competition is open

to all children in Massachusetts between the ages of 8 and 16 years.

Sixty prizes, amounting to \$150.00, are offered for exhibits of annual and perennial flowers, and for vegetables grown by the children in school gardens or in home gardens.

The committee of the society having the matter in charge is composed of Mrs. Robert G. Shaw, chairman; Mrs. E. M. Gill, Miss Katherine P. Peabody, Mrs. Dudley L. Pickman, and Mrs. John E. Thayer.

The exhibition, which is free to all, will be open Saturday from 12 to 4 and Sunday from 2 to 6 o'clock.

WM. P. RICH, Secretary.

## SOUTHAMPTON HORTICULTURAL SOCIETY.

The second annual flower show of the Southampton (N. Y.) Horticultural Society was held in a tent on the Art Museum grounds on August 19 and 20, and considering the dry season the exhibit was a good one a large variety of plants, cut flowers and vegetables being shown. One of the most interesting and best contested exhibits was in the class for dinner table decorations, there being six competitors in each day's competition who vied with each other to provide the most artistic effect with the flowers used. The prizes were awarded the first day to Mrs. G. Livingston, G. W. Campbell gardener, first; Mrs. Horace Russell, Wm. Gray gardener, second; Mrs. R. M. Thompson, O. G. Owen gardener, third. On the second day Mrs. Horace Russell, Wm. Gray gardener, first; Mrs. R. M. Thompson, O. G. Owen gardener, second; Mrs. G. Livingston, G. Campbell gardener, third. Another effort worthy of special notice was a group of palms exhibited by Wm. Manuel, which was awarded the Mrs. N. Thayer Robb prize. The same exhibitor showed a table of ferns and one of foliage plants and lily of the valley in pots. A group of bays and foliage plants shown by J. L. Breese, D. W. Clark gardener, was also much admired. A table of dahlias shown by B. Aymar Sands, B. C. Palmer gardener, was very favorable commented on. Mrs. P. B. Wycoff, J. Rinnex gardener, showed a large variety of plants and cut flowers and was awarded several first prizes.

In the vegetable department the Meadow Club made a very fine exhibit and won several first prizes. Mrs. Howard Townsend, J. Griffin gardener, showed in several classes of vegetables, the principal one being a collection of potatoes which was awarded first prize. Mrs. C. H. Wales, J. King gardener, showed flowers and vegetables which got several first prizes. Mrs. W. S. Humphreys, M. McLaughlin gardener, showed in several classes of plants and cut flowers and won a number of firsts. Among the other exhibitors who won firsts were Mrs. Barber, J. Hurst gardener; Mrs. Corlis, J. Barnwell gardener; Mrs. Gollwer, J. Harris, gardener. The judges were Alex. McKenzie and J. F. Johnston of Glen Cove, and W. H. Waite of Yonkers.

## FLORISTS' CLUB OF PHILADELPHIA.

Nominations of officers for the ensuing year and a talk on bulb growing in Virginia, by J. Guille, were the features of the monthly meeting of the Florists' Club of Philadelphia held on the 1st inst. Considerable difference of opinion prevailed as to whether it was advantageous to have our northern markets swamped with cheap southern flowers of narcissus, etc., in the early spring. W. K. Harris was a vigorous no, while P. Joseph Lynch took the high ground of altruism, and pleaded for the million. J. Otto Thilow, Leo Niessen, Edward Reid, Robert Kift, Jno. Westcott, and others contributed to the discussion, which was quite lively. Joseph Heacock and Fred. Hahman are the nominees for president; Arthur A. Niessen and David Rust for secretary. George Craig was re-nominated for treasurer. Edwin Lonsdale was nominated for secretary, but declined the honor. A new white decorative dahlia was exhibited by the Leo. Niessen Co. The Hubert Bulb Co. sent some samples of their bulb cultures.

## EL PASO COUNTY HORTICULTURAL SOCIETY.

The fourth annual flower show of this society held at Stratton Park, Colorado Springs, Colo., showed not only an increasing interest among children and amateurs, to whom a large portion of the exhibit is always devoted, but brought out keen competition among the commercial growers. Among the several classes scheduled, the Colorado Floral Co., Frank Hayden, manager, led in dinner table and mantel decorations in decorative plants and carnations; William Clark secured first prizes in floral wreaths, window and lawn boxes and geraniums; the Pike's Peak Floral Co. was first in the cut flower section and won all the firsts in roses with the exception of reds where William Clark's exhibit scored. W. W. Wilmore captured all the dahlia firsts and some seconds in gladioli, but H. J. Perry easily led in the latter class. The Deaf and Blind school were first on a single ornamental plant and their fine geraniums won second place. A superb collection of decorative plants was loaned for the occasion by Carl Fohn, superintendent at Glen Eyrie.

## SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

## Error in Secretary's Report.

It appears that the statement in the Secretary's report at Niagara Falls that Mr. Albert Dirwanger was the only member of the Society in Maine, is an error, and that Mr. Wm. Miller at Bar Harbor is also a member, and through a printer's error his name in the printed annual report was included among the members from Kentucky.

W. N. RUDD, Secretary.

August 26th, 1908.

### GARDENERS' AND FLORISTS' CLUB OF BOSTON.

Club meetings will be resumed on Tuesday evening, September 15. Program for meeting will be issued later.

This club will hold a field day at the New England Nurseries, Bedford, Mass., on Saturday, September 5. A special car will leave Arlington Heights at 12:15 with which connection may be made by leaving Park Street Subway station about noon. Those who desire can go by train on Lexington Branch of B. & M. R. R. at 1:01 P. M. to Shady Hill station, right on the nursery grounds.

The New England Nursery is the successor of the defunct Shady Hill Nursery. Since one year ago last March, when the new company took possession, an immense amount of overhauling has been done. A boulder-walled winter storage house 50 x 152, has been erected, two green-houses, each 18 x 100, are nearly completed, ten acres of border perennials and forty acres of ornamental shrubs and evergreens have been replanted, the entire two hundred acres under cultivation have been plotted, classified and keyed, and the prediction of Mr. Kirkegaard, the sales manager, that in a short time this nursery will be the peer of any in the State seems about to be verified. This nursery and the Geneva Nurseries, Geneva, N. Y., operate together, Theo. J. Smith being president of both. A. E. Robinson, formerly of Geneva, is manager at Bedford.

### AMERICAN CARNATION SOCIETY.

A meeting was held Thursday, Aug. 20, at S. A. F. Convention Hall, Niagara Falls, N. Y. It was called to order at 4:30 P. M., President M. A. Patten in the chair, with a good attendance of both directors and members.

The secretary was advised to have a list of names of varieties up to date published in the trade papers if they will do so.

Fred Burki was appointed to take the place of W. N. Rudd at the Chicago Flower Show to judge carnations. On exhibits from Canada if duty is demanded this society will assume that duty.

The secretary was instructed to ask some professor in the state of Indiana to write and read a paper for the meeting in Indianapolis next January.

It was suggested that the society offer a cup, value \$25.00, to be awarded at the exhibition of the English Carnation Society.

Indianapolis members present made it very emphatic that they were making great preparations for a banner meeting and want every carnation grower from the East, the West, the North and the South to attend.

The meeting was then adjourned to meet in Indianapolis, Ind., Jan. 27 and 28, 1909.

M. A. PATTEN, President.

A. M. HERR, Secretary.

### NEW ENGLAND DAHLIA SOCIETY.

Our Dahlia Exhibit which takes place September 17, 18 and 19 at Tremont Temple, Boston, Mass., is going to be one of the most important horticultural exhibits during this month. It is the first exclusive Dahlia exhibit ever given in this country and from

all appearances its magnitude and size will surprise a great many of our old timers. The enthusiasm of our individual members, who in the majority of cases are only amateurs, is extremely encouraging and we expect for once to show to the American gardening public that an exhibit of mostly amateur growers can be made just as interesting as that of commercial growers.

MAURICE FULD, Secy.

### CLUB AND SOCIETY NOTES.

The Connecticut Botanical Club held its annual outing at Lake Quassapaug on August 25.

At the next meeting of the New York Florists' Club on Monday, Sept. 14th, Mr. Benjamin Hammond, Fishkill-on-Hudson, N. Y., will talk to the club on some experiences in the school garden movement.

The Autumn Exhibition of the New York Horticultural Society will take place at Masonic Hall, Newport, R. I., on Sept. 12, 13 and 14. Admission will be free to the public on Sunday, 13th. Very liberal prizes are offered in all departments.

The sixth annual exhibition of plants, fruits and flowers under the auspices of the New Bedford Horticultural Society will be held at Odd Fellows' Hall, New Bedford, Mass., on Sept. 10, 11 and 12. Entries should be made with Jos. C. Forbes, 299 Chanery street on or before Sept. 7.

The Intertown Dahlia Association met at Ansonia, Conn. on Aug. 21, but could not decide on a date for their show, as many members reported that their stock was suffering from the weather conditions. It is thought that it will be possible to have an exhibition later, when the new blooms mature.

### OBITUARY.

#### Job Davies.

Job Davies, who has been connected with the florist business in Columbus, Ohio, for the past thirty-five years, died on August 21 at the age of seventy-seven. He came to this country from England when he was about 22 years old.

#### J. A. Lowry.

A well-known visitor to the leading British horticultural shows has lately passed away in Mr. J. A. Lowry, who for years was the business representative of "Garden Life," London, also of "Horticulture" in Great Britain. Mr. Lowry was highly esteemed by a large circle of friends, who lament the close of a useful career at the age of 52.

#### Mrs. Edmund M. Wood.

Mrs. E. M. Wood, widow of the late Edmund M. Wood of Natick, Mass., passed away on Thursday, Sept. 3. Mrs. Wood had a paralytic stroke a few days previous, and little hope for her recovery was held out by her physicians. Two daughters and one son survive her. She was a most estimable lady.

### COMING EVENTS.

New Bedford, Mass., New Bedford Horticultural Society, fall exhibition, Sept. 10, 11, 12.

Newport, R. I., Newport Horticultural Society, autumn exhibition, Sept. 12, 13, 14.

Washington, D. C., Florist Club of Washington, Chrysanthemum Show, Masonic Temple, September 12, 13, 14.

## THE VALUE OF STATE FLORIST ASSOCIATIONS.

Read before the Society of American Florists by Albert F. Boy.

Mr. President, Ladies and Gentlemen:

I have been called upon to talk to you this morning on State Florist Associations, their value and the relation they should bear to the Society of American Florists. I believe the best interest of this great society can be better accomplished and more fully developed by systematizing its work and the greatest good to the largest number can be secured through State Societies that can individually take up the work and develop what is most suitable for their localities.

To give you an idea what these Societies can do I will give you a brief review of the work accomplished by the Illinois State Florist Association.

After a year of preliminary work the present organization was formed and elected Mr. J. F. Ammann of Edwardsville, Ill., its first President. From that time the work was carefully planned and the first important step undertaken was to secure a definite and separate department for floriculture at our Illinois Experimental Station, believing this would bring further benefits in its train.

The next question was to raise funds to carry out the work. The Executive Committee set to work, a bill was framed and presented to the Illinois Legislature, becoming a law and giving us \$15,000 for the purpose stated. The bill provides for an Advisory Board appointed by the President of the Society, consisting of five members of the Association with the Dean of the College as chairman, whose duty it is to advise and consult with the University Officials what shall be done at the Station, and the results so far obtained show that they have attended strictly to their business.

The Experimental Station is located at Urbana in connection with the University of Illinois. The plans and specifications which appeared in the trade papers you probably are acquainted with. The houses will be planted with carnations this season and the work will be chiefly in fertilizers under the direction of Prof. H. B. Dorner, son of the veteran carnation grower of Lafayette, Ind., who has been placed in charge of the Experimental Station, with capable assistance.

When the officers of the College saw what our work meant and the amount of practical good it was going to do, they became enthusiastic and in addition to our appropriation from the Legislature donated to the cause out of the College funds the magnificent sum of \$7,000, making a total of \$22,000, to help carry on the good work, for which I assure you our Association was highly pleased. In addition to this they attended the services of the Entomological department and sent out one of their men to take up the thrips question, which has been doing an immense amount of damage in the rose-growing district, and have since detailed him on special work studying insect life and giving instructions in the different ways of fumigation, etc. At an early date a bulletin will be issued which will be of value to all.

Our first year's experimental work was done in greenhouses rented from Washburn Bros., in Bloomington, Ill., by Prof. Beal. This was mostly in the testing of the different commercial insecticides and when this bulletin is issued it may be a surprise in the varying analysis in these preparations tested.

We expect soon to see a course in floriculture established at the University covering soil analysis, a study in insect life and a practical training in greenhouse construction and heating, making a school which we have long dreamed of for our boys.

Now there are other important things that a State Society can do. Nearly every state has a State Fair and did you ever realize or stop to think that you can reach the masses quicker at a state fair than at a flower show. We took up this idea and thought it out in this-wise. The people who go to a flower show are as a rule flower-lovers and generally know just about what they are going to see, but the every-day, ordinary people do not go to these flower shows, but will go to their state fair.

Now nearly every state fair has a floriculture department and there are hundreds of people who never visit a greenhouse or even see one and never have flowers in their home or garden. They see these flower and plant displays and it creates a desire to have some in their home, which sentiment may have lain dormant forever if they had not visited the State Fair.

In a great many of the state fairs this department is looked upon as one of the side lights and whose fault is it but our own? Our State Society took this up, went before the State Board of Agriculture with our statistics, showed them the importance of our trade, impressed upon them the idea of cultivating the beautiful and elevating the taste of the people. This was hard work to get it through the heads of our farmer friends. Farm crops and cattle they understood, but did not realize that flowers cost money to grow and when the exhibition was over it was a dead loss to the exhibitor, but if some ordinary hog went in and came out with a blue ribbon he was worth so much more, but the flowers, why, of course, they did not amount to anything.

We finally gained our point and secured \$1,000 to the Illinois State Fair in premiums, also revised the list and gained an important recognition in the appointment of a practical florist as assistant superintendent of the floriculture department. Through the efforts of this Society the premium list stands on equal basis with any of our great shows. This is one of the things that a State Society can do. This is not work for our Society of American Florists to do and this is where I make one of my strong points.

The Society of American Florists has done its share of pioneer work, but there are some things it can still do. For instance our State Vice-Presidents can, in addition to what they are doing, get in closer touch with their Experimental Stations, take more interest in their State and County Fairs, visit the board of agriculture and get in touch with appropriation committees of the different State Legislatures.

Our trade has not taken advantage of these things. Our agricultural friends have and the results are shown by the many experimental stations devoted to their use. We have no one to blame but ourselves. The amount of capital invested in our business demands that we should have recognition and if we organize and go after it like the Illinois State Florist Association did you can get it.

Every city should have a Florist Club and every State a State Society and these societies become as feeders, from which the National Society can draw its membership and with this near relationship a far greater work can be accomplished.

It has been said that we have too many societies, the Carnation, Rose, Paeonia and Chrysanthemum Societies, which has a tendency to divert the interest from the parent Society. I say no. The very strength of the tree lies in its fibrous roots, without these the Society could not accomplish its work and stand at the top. Let it continue to be the advisor and counsellor of these Societies.

You know already, as I know, what good these Associations have done and we could not have done the work which has been accomplished in these special lines without the aid of these Societies.

Now a State Society can get nearer to its home members, awaken their interest in the work locally. You take up the school gardens and the "City Beautiful idea," which is one of the greatest modern ideas that the florists can take up and push with a good credit to themselves and benefit to their neighbors. This idea was taken up in the City of Springfield and with the assistance of the State Society was made a great success and if time permitted I would like to tell you about it for the "City Beautiful" idea aside from its moral and uplifting tendencies is one of the greatest advertisements the craft could have. Get the masses interested, start with the children and the rest will come.

There is also another feature, an important one and that is statistics of our business. This was thoroughly discussed by our State Association and through this we have been able to get in connection with the Census Bureau and with the aid of our Society of American Florists we think we can, and will have a better census of our business than ever.

When you go before a legislature and ask for an appropriation they want to know who and what you are and we found that this was a very important feature, to know just how we stood and what better way of getting it than each State take up this work.

Now you may ask, what relation do we bear to our Society of American Florists. I answer that in this way. The same relationship as the State bears to the National Government, each working out its own problems all for the common good and I believe it should be the policy of this society to foster and aid any state that will take up this work. We can make this Society stronger in membership and far reaching in the good work it can do, continuing its Committee on National affairs, such as exchange rates, statistics, postal laws, and like broad questions.

Do not forget that with this close relationship of State Societies you secure and inspire local interested workers in the cause who through such interest, become eventually enthusiastic members of the Society of American Florists, the proud parent of them all.

#### OUT-OF-DOOR ROSES.

A Paper Read Before the Society of American Florists by W. C. Barry, Rochester, N. Y.

(Continued from Page 319)

##### Dwarf Polyantha Roses.

In the last few years the dwarf Polyantha or miniature roses have received great attention from rose growers and their introduction marks a new era in rose culture. They are quite hardy, flower freely, and continuously and the blooms are produced in clusters, rendering them very effective and valuable for bedding. Baby Rambler is one of the best being covered with crimson blooms all summer long. Clothilde Soupert bearing very large and beautifully imbricated pearly white flowers has proved to be a most excellent bedder and is rapidly winning wide recognition. Baby Dorothy, a new variety, is similar in growth and habit, but bears pink flowers. It too will be prized as a bedder. Cecile Brunner is one of the prettiest, bearing freely miniature flowers of perfect form, and salmon pink color. It is dainty and beautiful, grows well and flowers freely.

There are several others in this class which can be recommended like White Baby Rambler, Catherine Zeimet, Carnarion Vogel, Leonie Lamesch each one having charms of its own. Time will not permit me to refer to them at length, but let me assure you that they are real beauties, deserving of our most careful attention. From this time on it may be said that we possess real bedding roses, and our supply must be drawn mainly from this and the next section for that purpose.

I have left for the last the consideration of the Hybrid Tea roses which are marvellously beautiful. The introductions of Dickson & Son are of the highest merit, possessing all the charming qualities of the older roses, but intensified to a remarkable degree. The combinations have been most successful, and the new varieties may be said to be almost perfect. The buds are large, long and of fine shape, the shades of color new and charming and the open flower surprisingly beautiful. Killarney is one of the best known and grows in favor every year. It flowers freely and continuously, and is a good bedder. Other beautiful sorts are Bessie Brown—creamy white; Dean Hole—silvery carmine; Florence Pemberton—creamy white suffused pink; Lady Moyra Beaulerc—bright madder rose; Liberty—brilliant velvety crimson; Mildred Grant—ivory white, shaded pink; Belle Siebrecht—bright rosy pink. Kaiserin Victoria, La France and Testout are too well known to need any recommendation. They are still held in highest esteem by rose lovers, and whoever plants them will not regret it. Gruss an Teplitz, a very free flowering crimson scarlet rose, is useful and effective. It grows vigorously, flowers freely, is quite hardy and may be styled a good bedder.

I think that I have nearly exhausted

your patience in presenting this long list, but before closing I wish to mention two tea roses of rare beauty and excellence which, even if they require extra care when grown out of doors, should always have a place in every garden. I refer to the Cochet roses, white and pink. I think when their merits have been fully realized they will be rated as the best roses we have.

##### A Remarkable New Rose.

In concluding I will refer to the new rose of Pernet-Ducher called Lyon-Rose, the result of a cross between Madam Melanie Soupert hybrid-tea and an unnamed variety. The flowers are of large size, moderately full, globular in form, of a superb shrimp pink color and fragrant. The buds are large, long and of a coral red. Mr. Pernet says that although this magnificent rose belongs to the class Pernetiana, it possesses all of the precious qualities of the hybrid teas, from which it has derived its principal character, and above all the advantage of perpetual flowering.

Among the new roses judged at Paris in the Bois de Boulogne recently, eighty-seven varieties being submitted, the Lyon-Rose received from the jury the maximum number of points, and it was the only one to receive the full number, our friend and member, Mr. E. G. Hill, being one of the jury of award. The race of roses called Pernetiana is a result of a cross between Persian Yellow and Antoine Ducher. Soliel d'Or belongs to this new race. It is certainly very gratifying to note the wonderful progress made in these crosses. The Messrs. Pernet-Ducher have been most successful and this latest production is excellent and will be greatly valued. It is a novel and most distinct rose. The flowers which I have seen the past summer have impressed me greatly and I consider it a novelty of the greatest importance.

On this occasion I can extend to you all, as lovers of the rose, my heartiest congratulations upon the achievements of the past as well as upon the bright future that is before us.

#### PARK ADMINISTRATION.

A Paper by J. A. Pettigrew, Superintendent of Parks, Boston, read before the American Association of Park Superintendents.

Your secretary has billed me to give the Association a paper on park commissioners and administration.

The subject of park commissioners has been discussed so recently in our bulletin that it seems unnecessary for me to say anything on the subject; furthermore, it is doubtful in my mind if its discussion would be proper or profitable.

The subject of park administration, however, is of the utmost importance to us all; so much depends upon the manner in which it is conducted that too much study cannot be given to the devising of ways and means of doing the work intelligently and economically.

There are various methods under which the executive and working forces of a park department are organized. Without criticising any method, I will endeavor to outline a plan of organization which is born of experience and practice.

The chief executive of the board should be the general superintendent, who should be one of wide experience and possess a good knowledge of ornamental horticulture and landscape gardening. It is equally important that he should be intelligent and energetic enough to assume responsibility and initiative, when the interest of the department demands it. To him all report of subordinates should be made, and all communications to the board of commissioners with reference to the park department should be made by him.

The general superintendent's staff may consist of one or more engineers and one or two assistant superintendents, as may be necessary.

The engineer should be one who can cut loose from exact lines and grades when, by an adaptation of existing circumstances, an artistic effect can be produced or a saving made. This is especially important in constructive work. While a good engineer cannot know too much about horticulture, he should, at least, know trees and shrubs fairly well, and have a knowledge of their soil requirements.

Assistant superintendents should possess, in degree, the same qualifications as those indicated for the superintendent. They should be assigned each to a definite district and be responsible for the prompt and efficient execution of the work; therefore, they should possess a large capacity for executive work.

Under the assistant superintendents there should be foremen who are experienced in handling men and work. While it is not absolutely necessary for foremen in constructive work to have horticultural knowledge, yet it would be helpful in the prosecution of their work. In maintenance work, however, it is indispensable that foremen should be trained horticulturists. For this reason, it will be found to be a good plan in the maintenance work of the department to divide the park system into districts, placing a gardener, with sufficient men to do the work, in each district. I find men with nursery experience good for this charge. They should know trees and shrubs, be able to direct the planting and care of them and the care of walks and lawns, have a sense of order and cleanliness, and be able to handle small gangs of men. In this way one of the most important features of successful park management can be secured; that is to say, the well-being and appearance of trees, shrubs, and all that goes to make pleasing park landscapes. The responsibility placed upon the gardeners has the effect of inducing a spirit of emulation among them, to vie with each other in efforts to surpass in excellence of work.

As to the greenhouse and flower garden, I am of the opinion that such features should be confined to one spot, and call the place a garden. The promiscuous dotting of flower beds and splashes of colors in parks is inharmonious, and it is certainly expensive as compared with results. Furthermore, I have found such a system provocative of jealousy. One locality thinks it is not equally favored as another, and, in the effort to appease, further extension is made; and thus it goes on, until what is really a florid, unnatural and evanescent feature of park adorn-

 BOSTON, MASS.

ment attains an undue prominence, equalled only by its cost. This criticism applies only to exotic bedding plants. Hardy perennial plants and spring bulbs can be naturalized in the grass and on the borders of shrubbery in a natural and effective manner. This style of gardening can be handled by the district gardeners. If, however, you have greenhouses and have exotic bedding out to do, a competent plantsman will be required for the head, with a sufficient corps of gardeners.

The barn foreman, by reason of his close association with the teamsters, I find to be the best head under which to place street sprinkling for dust suppression; otherwise, teamsters are subject to the gardener or foreman of the district in which they may be at work.

Old or partly disabled men can be used for paper-picking or cleaning up, under the charge of the district gardeners.

Road-making and road repairs require a special equipment, which it is economy to keep steadily employed. With regard to grading, I prefer to do it with the park force. Park grading is so simple, just so much material to be moved, that it is more of the nature of adapting surface conditions, which cannot be sufficiently explained by plans and specifications to enable one to profit, yet much can be done by intelligent foremen under proper direction. Road-making I have also found to be more than compensated for in quality, if a little more costly when done by the park force.

A repair department effects a saving of time and money. This may include carpenters, plumbers, blacksmiths, painters, machinists and pipe-fitters, a harness-maker, a grinder, and a saw-sharpener. These can all be under one foreman. A little machinery and power are also a great convenience.

As to purchases, a good practice is to have samples submitted with proposals, and select for recommendation to the board according to quality as compared with prices, keeping the samples for reference. All requisitions for supplies should be referred to the assistant superintendent, thence to the general superintendent for approval.

For convenience in entering into the books, each foreman or gardener in charge of men should make a daily report of expenditures under the proper account for labor, which footing should correspond with his time book total for the same day, suitable

## FINE 4-INCH POINSETTIAS

**THE E. G. HILL CO., Richmond, Ind.**

blanks being furnished to each foreman for this purpose.

Small parks or playgrounds do not need the supervision of a foreman. Worthy laborers can be appointed to the charge with a slight increase of pay; if more than one man is needed, common laborers can be detailed to assist. I find this plan to work very well.

For conducting the play or work in children's play grounds we employ women, preferably school teachers, as they have better control over the children. They are available for this work each day after 4.15 P. M., and on Saturdays; also each day from 9 A. M. until 6 P. M. during school vacation.

The gardeners and foremen in charge of small gangs on maintenance work should be furnished with tool boxes on wheels for the ordinary tools needed in this work. They should also have portable sanitary closets. These conveniences prevent much loss of time. Foremen of construction gangs should have portable shanties, with cook stove and the attendance of a boy before lunch time to warm any food which may require warming. Little attentions of this character are much appreciated by the workmen.

The care of materials and tools is hard to regulate under any inexpensive system; the simplest is to have a general store house, in charge of a storekeeper, who shall issue stores only on the requisition of a foreman, charging the issue to the signer of the requisition. When stores are given out to replace broken tools, the broken tools should be handed in to the storekeeper as evidence. The storekeeper should be alert to investigate any suspicious requisition.

As to the number of men required

for maintenance work, no estimate can be given. So much depends upon the quality of the work and the amount of money available. Statistics of the cost per acre for park maintenance in various cities in the United States show that the cost varies from over seven hundred dollars per acre to less than one hundred dollars per acre.

### MENACE TO AMERICAN BULB TRADE WITH FRANCE.

An influentially signed petition against the interdiction of American import of bulbs etc., has been lodged with the French Government. The French nurserymen point out that their chief imports from the U. S. A. are Lilliums and Tuberoses, neither of which could act as vehicle for importation of the San Jose Scale; their purchase of shrubs, etc., being quite insignificant. The only effect of the recent law has been that what American bulbs are urgently required are imported via England and Germany at an extra cost of 30 to 40 per cent. Horticultural Advertiser, London, Eng., Aug. 19, 1908.

### MOVEMENTS OF GARDENERS.

Carl E. Kern has been appointed assistant superintendent at Spring Grove Cemetery, Cincinnati, O., where extensive improvements are under way. Mr. Kern was formerly with the National Cash Register Co. at Dayton, O., but work in the landscape department there has been suspended.

11 Hamilton Place, BOSTON

Rhus typhina var. filicina is the subject of admiring comment by C. Sprenger in Die Gartenwelt for August 8. The foliage is described as twice-feathered, the under side grey-white, deeply indented and sometimes laciniated or irregularly toothed. The writer especially recommends this graceful shrub for the rockery, margins of streams, etc. The foliage turns scarlet and gold in autumn.

## ORCHIDS

Our latest importations have been, Cattleya Chrysothrix, Cattleya Gaskelliana, Cattleya Gigas, 'Hardyana district', Phalaenopsis Amabilis Schilleriana and others. We will receive in a short time, Cattleya Downiana, Miltonia Vexillaria and others. Later we expect for THE FIRST TIME IN AMERICA an importation of Cattleya Lawrenceana. On hand we have an immense variety of established and semi established plants, which we are selling now little above cost price.

# 'XTRA! 'XTRA!! 'XTRA!!!

All about the **terrible shortage** in the larger sizes of **Lilium Harrisii** which amounts to over 50 per cent. There are absolutely no more in the market. Wise growers are planting

## COLD STORAGE LILIES

**Lilium Longiflorum Giganteum** potted September 1st to 15th will flower for Thanksgiving and up to new year, **Lilium Speciosum Album** for Easter. This is not a seedsman's theory but practiced by leading plant growers in the United States and Canada, also Europe.

## COLD STORAGE LILIUM GIGANTEUMS AND SPECIOSUMS, ETC.

Our stock of cold storage lilies are **not surplus or left over bulbs**, but bulbs put into cold storage on arrival, packed especially for this purpose. We offer them till sold as follows:—

### LILIUM LONGIFLORUM GIGANTEUM.

7— 8 inch, 250 bulbs in a case.....	\$15.00 per case;	\$6.50 per 100;	\$60.00 per 1000
7— 9 inch, 300 bulbs in a case.....	21.00 per case;	8.00 per 100;	70.00 per 1000
8—10 inch, 200 bulbs in a case.....	19.00 per case;	10.50 per 100;	100.00 per 1000

### LILIUM SPECIOSUM ALBUM.

8— 9 inch, 160 bulbs in a case.....	\$10.00 per case;	\$6.50 per 100;	\$60.00 per 1000
9—11 inch, 100 bulbs in a case.....	10.00 per case;	10.50 per 100;	100.00 per 1000
11—13 inch, 100 bulbs in a case.....	18.00 per case;	18.00 per 100;	175.00 per 1000

All Cases Repacked and Bulbs guaranteed sound.

**ARTHUR T. BODDINGTON, Seedsman,** 342 WEST 14TH ST., NEW YORK CITY

### BULB GROWING IN AMERICA.

At the regular meeting of the Florists' Club of Philadelphia on Tuesday evening, September 1, James Guille read a paper on the above topic. He called attention to the proportions to which certain branches of the bulb-growing industry had already attained in this country and predicted that the time is now not far distant when a large proportion of the money now spent in Europe for bulbs would remain here.

He spoke of the great trouble, delay and expense incurred in the importation of these goods and the vexations incident to valuation, also the difficulties of doing business with sources of supply 4000 miles distant. These drawbacks together with the cost of transportation, and the frequent loss from heating in transit are a powerful incentive to the production of bulbs in home territory and Mr. Guille believed that the proper soil, climate, etc., would not be lacking, there being an abundance of territory where conditions similar to those in Holland are found.

In his work hitherto he had met with varying success, some sorts responding to American culture much better than others. The labor question had been settled in part by the substitution of mules for hand labor, the land being so much cheaper here that abundant room for cultivation is available. He had found more or less prejudice against American bulbs which would in time be dissipated as their good qualities became apparent. He claimed superiority for American

### Surplus offer of

## FORMOSA LILIUM LONGIFLORUM

On account of unfavorable weather the bulbs of the Formosa Lilium Longiflorum did not grow up to the sizes expected but the plants formed good solid bulbs. We are convinced our 6/8 in. size will give the same results which under favorable conditions a bulb of 7/8 in. would produce, and if two bulbs are planted in one pot the plants make a nicer showing than those with a single stem.

6/8 in. bulbs, 100 in a case at \$16.00 per case, 5% cash discount.

## CALLAS, WHITE, JAPAN CROWN

Our stock is grown for one season in dry loamy soil to make these roots fit for the long journey, consequently they are not as large as California grown stock. They produce however more flowers and are perfectly healthy.

Size 1—2 in. in diameter \$45.00 per 1000, 5% cash discount.

**THE YOKOHAMA NURSERY CO., Ltd., 31 Barclay St., N.Y.**

grown narcissi in their earliness of flowering, the difference in their favor amounting to from five to ten days, due to early ripening in the spring. He advised a more general forcing of Spanish iris for cut flower purposes, also the small early-flowering gladioli.

## Seed Trade

This is the season of agricultural fairs and Uncle Hiram and his family are out to see and be seen. Annually the discussion as to what part the seedsman should take in these fairs waxes more or less warm, and the result is usually about a draw. Those who insist that the seedsman should on general principles aid agriculture even though the pecuniary profit be not large or immediate, seem to have the better of the argument, as anything that materially improves or benefits agriculture inures to the advantage of the seedsman. The distribution of catalogues and other literature, ought to be good advertising, and if accompanied by an exhibit of select vegetables should prove both interesting and instructive to the farmer. This method of advertising, however will no doubt be of greater benefit to a local seedsman than to the mail-order house which is usually more or less remote. However, it is often remarked that one large advertiser of any line of business, benefits every other firm in that line, and every liberal advertiser among seedsmen is more or less of a general benefactor of his trade.

Referring again to advertising at local fairs, the writer does not assume to speak with authority as to whether it is a paying investment or not, and inquiry among many firms which have tried it does not show unanimity by any means, though the weight of opinion is greatly in the affirmative. Many who are in the negative, look at the matter solely from its immediate effects, the quick returns, which seems hardly a fair estimate of its value. It is really as bread cast upon the water to return after many days—often in a few days—but in any event sure to return with many fold increase, directly or indirectly.

After a week of unseasonably cool weather, accompanied by some light frosts and many scares, it has again turned warm, and two or three weeks more of such weather will place the corn crop beyond damage by any frost likely to visit the corn belt for many weeks to come. Prospects for vine seeds have brightened considerably, but beyond question there will be quite a shortage in muskmelons. No figures are at hand now, but they will be given as soon as available.

Further and more extended crop news will be given in next week's HORTICULTURE, and it may be well to call attention to the many crop rumors afloat, many of which flatly contradict the other. Such crop news as is given in HORTICULTURE correctly represents conditions at that writing, but as stated in a recent issue, conditions rapidly change earlier in the season, and most promising conditions may be changed to the opposite and vice versa, within a week or two. At this season of the year most of the only crops subject to insect and blight plagues are corn and vine

seeds, and these are susceptible of very little improvement, though of serious detriment.

There were many prophecies of a heavy shortage in tomatoes earlier in the season, but weather for the most part has been ideal for ripening the crop, and excepting where the fruit has failed to set, prospects are for a good average crop, and seed should be somewhat easier in price than last year.

A reorganization of The Templin Co. may be looked for at an early day, though possibly not in accordance with the plans of the receiver, who, according to some reports, is eager to obtain the business for himself, having found it profitable even under the adverse conditions in which it was placed the past season. The business was to have been sold at some date in July last, but the sale was postponed at the request of the receiver. It is earnestly hoped that whoever obtains control, the high standard for quality and integrity, always a marked characteristic of this concern, will be fully maintained.

### HOLLAND SEED CROP REPORT.

Sluis & Groot report on the various seed crops in Holland, as follows:

White, Red and Savoy Cabbage, Brussels Sprouts and Broccole.—More than half of our plantations have been destroyed by frost. They promise a medium crop, and in some places they look even bad, especially on account of the plants starting to grow again after having produced already a great many pods. This is due to the fact that rains came too late, and it is of course highly detrimental to the undeveloped seeds in the pods. Many varieties will be rather scarce next season. Turnips and Swedes—A very large part was destroyed last spring by frost. The remainder does not look so very well, because there are worms in the pods owing to the unfavorable weather for this article. Kohlrabi—Little sown; stands fairish. Mangel-Wurzel, Sugar Beet and Beet—From present prospects we expect a good crop, but there are few plantations. Carrots—The plantations of the later varieties are very unimportant. Those of the early varieties are of usual importance. As a whole there is not a very promising stand. Parsnips and Scorzonera—Good, usual acreage. Cornsalad—The new crop will be relatively small. Radish, Summer—The plantations are not very important. Partly they are looking rather well, but in some instances they promise less than a medium crop. Radish, Winter—Not much planted. Stand very promising. Onions—Very small acreage. Stand is partly good, but in some parts only a middling one. Moreover blight appears in some districts. Garlic Bulbs—Good. Celeriac—The plantations of this article are of usual importance and they look very good. Parsley—A very small area has been planted, but this article looks promising. Borage—Looks good, but only small quantities have been sown. Chervil—Small crop, for considerable acreage was lost. Spinach—The plantations of this article are of usual importance, and they are looking rather good, but part of them were lost last spring.

Cucumbers—Pretty good but there are only a few plantations. Peas—Generally good, but some fields suffered from blight. Dwarf-Beans and Running-Beans—The general standing is under middling, but the plantations are rather important. English Beans—We expect an average crop.

Owing to the very favorable weather, flower seeds are looking very well with the exception of a few perennial articles, which suffered more or less from frost, such as Campaula Medium, Myosotis dissitiflora, etc. Antirrhinum—Promises a very good crop. Calliopsis—Looks all right. Campanula—The annual varieties are good. Perennial promise less than a medium crop. Candytuft—Middling crop, little has been sown. Centaurea—Good standing. Convolvulus—Stand very good. Dianthus—We will probably have a very good crop. Eschscholtzia—Very good. Gypsophila—Rather good, but few plantations. Helichrysum—Looks promising until now, but little has been sown. Lobelia—Stand good until now. Mignonette—In some places they are thin, especially the better varieties, but generally speaking, they are good. Mimulus—Promises a pretty good crop. Myosotis—Looks rather good. Nasturtiums—There are much less plantations than usual, but they look rather good. Pansies—There are not many plantations of this article. The plants look all right, but if this persistent drought continues, they will not produce a large quantity of seeds. Papaver—Good crop. Petunia—Looks very good. Phlox—The plants are looking good, but probably there will not be many seeds. Rhodanthe—Pretty good, but few plantations. Stocks—Virginian—Stand good as yet. Ten-Week-Stocks—Magnificent stand. Verbena—Good until now. Wallflower—Crop very probably under middling. Many plants have been destroyed by frost.

### MARKET REPORT FROM CANARY ISLANDS.

#### Bermuda Onion Seeds.

In a country like the Canaries where no record is kept by the Custom House authorities, it is quite im-

**POT GROWN STRAWBERRY PLANTS**  
Set in August and September will give a full crop next June. Our new method of growing them gives fine roots. C. S. PRATT, Reading, Mass. Send for Catalogue.

possible to know the exports to the U. S. or elsewhere, and even the recourse of obtaining said information from the American Consul is useless, because one or two of the principal exporters make out consular invoices in English ports, through which nearly all the goods from this country to the U. S. must pass. However, the ultimate results of the crops this year have baffled all expectations, turning out to be less than half of probable yield.

American buyers have had their orders very much cut down by shippers on this side, and the demand for White Bermuda and White Crystal Wax has been considerable. There are still a few late parcels being offered by small agriculturists here, but my honest advice to American buyers would be not to purchase anything more for the present season and they will be on the safe side. Most of the native farmers are very primitive in their methods and, with no special knowledge of agriculture, one of the consequences of their ignorance is that many hybrid onions have been raised year after year. Standard stock can only be obtained under an intelligent supervision.

Little attention is paid by exporters of seeds to the U. S. to keep absolutely true the distinctive flattish-round shape of the Bermuda onions, and although, in general, American seedmen have been satisfied with what they have received in previous years, there is plenty of room for improvement. I would advise that seedmen and dealers in the U. S. can considerably help in the task of perfecting the cultivation of Bermuda onion seeds if they order a minimum quantity of their likely requirements one year ahead—that is, that such minimum quantity orders should be in the hands of Teneriffe exporters not later than in the month of August of each year.

#### Flowers and Bulbs.

Kindly call the attention of interested parties through your valuable paper to the fact that our climate and soil are well adapted for raising under the most favorable conditions nearly all kinds of foreign flower seeds, plants and bulbs, especially in the famous Orotava Valley, and at Laguna the climate and dampness of the latter district being somewhat similar to that of Holland, and it is a splendid district for raising bulbs.

## FAIR AND NEIGHBORHOOD FLOWER SHOWS.

Stratham, N. H., 15th annual aster show on August 27.

Salt Lake City, Utah, flower festival, September 17-19, 22-25.

Webster, N. Y., flower carnival closed August 21 and was pronounced a decided success.

Paterson, N. J., Totowa Dahlia and Flower Association, August 29 to September 2, flower show.

Springwater, N. Y., floral exhibition, August 20; a collection of water lilies was the leading feature.

Marshfield, Mass., Agricultural and Horticultural Society held its 42nd annual exhibition, August 27, 28.

Athol, Mass., Prof. S. T. Maynard of Amherst and A. A. Hixon of Worcester, Mass., will act as judges at the Athol fair.

Worcester, Mass., County Horticultural Society, annual exhibition for boys under 14, August 29. Rockwood Reed secured five prizes.

Rockville, Md., agricultural and botanical fair, August 25-28. Prizes in the flower section seemed to be about evenly divided between Miss Ellen Farquhar and Mrs. W. E. Ricketts.

Fairport, N. Y., Floral Society held its fourth annual flower carnival Aug. 27, 28. The schedule included 52 classes, with attractive cash prizes. Charles Vick of Rochester and F. Fisher of Fairport were the judges.

Lachine, Can., Horticultural Society flower show, August 20. The display of phloxes, petunias and zinnias were unusually fine. Robert Burrows, gardener to R. B. Angus, showed some peaches of enormous size. W. J. Wilshire, Alex. Gibb, J. Dunbar, J. Eddy, George Pascoe, D. Wright and J. Kirkwood were the judges.

## CHICAGO PERSONALS.

Mr. and Mrs. Chas. W. McKellar are at Mt. Clemens, Mich., where they went at the close of the convention.

Chicago visitors: Mr. Powell of the Colonial Floral Co., Goshen, Ind. Mr. and Mrs. J. F. Johnson of Ft. Smith, Ark., are Chicago visitors. While here Mrs. Johnson was taken ill, and is in the hospital. William and Albert Smith, of the Leonard Seed Co., have returned from a rather extended vacation. Frank Oechslein is taking treatment for rheumatism at Benton Harbor, Mich.

## NEWS NOTES.

George Wilson & Sons have started in the nursery business at Marysville, Md.

J. A. Van Kirk intends to start a nursery for citrus fruit trees on the land he has recently acquired at Phoenix, Ariz.

The greenhouses of John M. Williams, Greenwich, Conn., were damaged to the extent of \$2000 by fire on August 19.

The idea of observing one day as "Flower Day" in cemeteries is said to have originated with the Oak Grove Cemetery, Springfield, Mass., in 1903, and the day set apart for this purpose is September 8.

The New Floral Co., E. B. Hutchins manager, moved into more spacious quarters in the Masonic Building, Bangor, Me., on August 25. The rooms were handsomely decorated and were thronged with visitors on the opening day.

The farmers of Ivoryton, Conn., who have neglected to destroy the wild carrots on their land have been served with a warning by the grand jurors that the law will be enforced. A fine of \$5 may be collected for each additional day after the notice has been served.

At the Flower Market auction sale in Boston last Saturday, F. W. Fletcher had a large lot bunch of Physostegia Virginiana on exhibition to show the adaptability of this flower for funeral floral work. The effect is very pretty, the delicate heather-like pink tint combining nicely with the green material. This flower is gradually securing a foothold in the estimation of the Boston florists.

Auction sales of choice of stalls at the two Boston flower markets came off successfully on Saturday, Aug. 29, results being satisfactory in each. First choice at Park Street Market was sold to Waban Rose Conservatories for \$110.00, and first at Music Hall Market to Rosemere Conservatories for \$102.00. Second choice in each place was sold for \$80.00. Mr. Cartwright states that the aggregate sales at Park street amounted to nearly \$5000, something in excess of last year. Treasurer Carmichael of Music Hall states that the average of price this year was \$5.00 per stall better than last and that six new members were gained.

## BUSINESS CHANGES.

Albert Houle has purchased the business of Robert Abbs at Toronto, Canada.

Wollaston & Wallace, Oak Bay, Victoria, B. C., have sold out to Flewin's Gardens.

Wm. E. Hazard has purchased the retail business of J. F. Wood, Providence, R. I.

The Humphrey Floral Co. has bought the Mitchell greenhouses at Rome, N. Y.

The Rode greenhouse at Bowling Green, O., was sold at receiver's sale on August 19 to George E. Mercer.

Donald Cameron of Newburgh, N. Y., has bought of J. J. Baun his stock in the Stafford Floral Co., Stafford Springs, Conn., and has leased the greenhouses.

## INCORPORATED.

Schattmaier Floral Co., Newark, N. J.; C. B. Cullen, J. G. Schattmaier, A. B. Crane; capital, \$10,000.

## Flower Market Reports.

**BOSTON** There was some hope that the spell of dark and cold weather would so reduce the product as to clean up the market on accumulated stock, but that hope has vanished. Every kind of material from the "fakir brand" of rose up to the "special" Beauty, stands just where it did, and the stagnation shows no signs of diminution. Asters are in by the car-load—beautiful ones at that, and a credit to the grower—but it is impossible to move them and prices are at the vanishing point. All other material is in full supply, and the buyer sets the price.

**CHICAGO** Spasmodic is the word that best expresses the condition of the Chicago market. A brisk shipping trade will be followed by no trade at all and local conditions are not much better. The bulk of the sales are for funerals, so white and light colored flowers are selling better than red. Good Kaisersins sell rapidly. Killarney and Richmonds open up so fast that they must be moved quickly or lost. Brides and Bridesmaids are small and it will be two or three weeks before good ones are in. Marshall Field has proven itself a grand rose for summer blooming and Peter Reinberg is well pleased with its behavior this summer. In carnations White Perfection for white and Scott for pink have led for summer blooming. White Perfection comes early, stays late and is not inclined to get sleepy in the hot weather. Gladioli are not all that could be desired. Very many poor ones are seen in the market and good ones are selling for less than the cost of the bulbs. Lilies are not very much in evidence, but are good in quality. Sweet peas are practically out of the market.

**NEW YORK** September brings but a slightly increased demand, which is more than offset by a growing supply of material. The cut of roses is heavier, and there are many more asters coming into the market; of the latter many are of fine quality, long stems and large flower. As yet, Beauties are more plentiful in short grades; there is, however, a sufficiency of specials, the call for which is variable, with consequent price fluctuations; in fact, with present conditions anything like a fixed price is out of the question. Carnations do not yet figure to any extent. There are some from out-doors and a few from inside. The protected flowers look good. Field-grown stock of the named varieties is plentiful. Gladioli are only of fair quality. Lilies are not so plentiful as they have been and there is at least a temporary improvement in their sale and

# ASTER <sup>TRADE MARK</sup> Lady Roosevelt

## THE QUEEN OF AUTUMN

### CHRYSANTHEMUM TYPE

**Cut Flowers for Sale** In order to get introduced into the trade we hereby offer for sale to the retail florists of the United States and Canada cut flowers of this world famous, improved, unexcelled type of Aster. We expect by the time they come into bloom, which will be about the 15th of September, to have the plants standing 4½ to 5½ feet tall, possibly some few of same 7 feet, enabling us to cut boom stems ranging from 33 to 48 inches (4 feet) in length, with flowers from 4 to 5 1-2 inches in diameter. The prices, the same as Roses, will be graded according to the length of stems, ranging from 50c to \$3.00 per dozen. On account of the extra length of stems, they being of a stiff, wiry nature, capable of sustaining the extremely large bloom may be shipped 1500 to 2000 miles without deterioration, as they absorb sufficient water to preserve them in transit. A trial sample order of a few dozen is solicited, which will tell you far more convincing as to the merits than all we might say.

A price list with terms of sale, embodied in an illustrated 1908 invitation folder, or hand bill, will be sent to interested parties upon application. Said folder also contains much of interest relative to the development of this new strain and type of Aster, seed of which we have sold, during the past spring, in nearly every state in the Union, also Canada, Europe and Australia, and is being grown after our improved methods of Scientific Intense Culture instructions, which are original with ourselves and unlike the methods set forth by seedsmen and practiced by Aster growers generally. We already have orders booked from retail florists for sample shipments of Asters from cities far and near; viz., Denver, Colo.; Boston, Mass.; New Orleans, La., and Toronto, Canada.

**THE SCIENTIFIC INTENSE CULTURE RANCH**  
Chas. A. Kibbe, Mgr. Box 344, Elmhurst, Ill.

price. Lily of the valley has been and is supplied faster than it is consumed. Signs of any marked improvement in market conditions are lacking, and little can be expected except occasional spurts for some time to come.

**PHILADELPHIA** The market shows possibly a slight recovery. Good frame and greenhouse-grown asters are now coming in abundantly. The Crego, one of the choicest, is an improved Comet. These ought to bring at least \$1.00 to pay the grower for such superb stock, but the majority of retailers don't feel keyed up to anything over \$2.00 or \$3.00. American Beauty roses are good and cleaning up nicely. Mrs. Jardine has made its appearance, and is the best pink rose on the market at this writing, and improving right along. Orchids very, very scarce. Easter lilies are also scarce, and a good market is found for all first-class stock arriving. The green market has improved a little, especially on smilax. Gladioli are draggy. Even the light colored are slow, and the darks go begging. How is it that a dark red dahlia is the best seller, while a dark red gladiolus is the worst?

#### PHILADELPHIA NOTES.

Sept. 22nd is the date of the dahlia show at Vincent's, White Marsh, Md. A number of Philadelphians will attend, leaving on the 8.15 A. M. train.

A Philadelphia wholesaler philosophizes on advertising, thus: The demand for our goods is hard to start,

but once started, it spreads like wild-fire. That's why it pays to spend in advertising a hundred times the value of the customer's first order. We have long given up the idea that "good goods will always sell themselves," and now keep constantly hammering until the people are compelled to listen to us. A merchant's advertising expenditures should at least equal the rent of his business premises. We often spend more.

Bookings for rose White Killarney are reported to be quite extensive in this city. The Waban surplus has been engaged by the Pennock-Meehan Co. The Pennock-Meehan Co. have also arranged with the raisers of the new carnation, O. P. Bassett, so as to supply the trade in this vicinity for the coming season.

The next few weeks will see most of the vacationists back. Wm. Falck appeared on the Pennock Bros. fence this week, after an absence of three months in Europe. Chas. E. Meehan had a good time in Canada and New England. Arthur A. Niessen took the opportunity after convention to make many long contemplated calls. Robert Kift went to see "the Philistine" at East Aurora, N. Y., and called on friends elsewhere.

Amos Eldridge Brown, the financial expert of Burpee's, arrived home from Europe on the 31st ult. Edinburgh he considered the loveliest city of the old world, picturesque, historically and sentimentally unique.

Visitor in Philadelphia: A. T. Bodington.

## CATALOGUES RECEIVED.

Wm. Elliott & Sons, New York.—Folder of Pot-Grown Strawberry Plants.

Scientific Intense Culture Ranch, Elmhurst, Ill.—Folder of Aster Lady Roosevelt.

Daniel A. Clark, Red Oak Nurseries, Fiskeville, R. I.—Hardy Herbaceous Perennials, Fall, 1908.

New England Nurseries, Inc., Bedford, Mass.—Bulbs, Plants, Evergreens, Roses and Potted Strawberries for Autumn Planting.

Valdesian Nurseries, Bostic, N. C.—Wholesale Trade Price List, Fall 1908 and Spring 1909, for nurserymen, florists and dealers only.

Wm. Elliott & Sons, New York.—Autumn List of Flowering Bulbs. Cover in colors. A list of pot-grown strawberry plants is included.

Dingee & Conard Co.—West Grove, Pa.—Guide to Rose Culture and Rose Growing, Fall, 1908. Profusely illustrated. Portrait of Chas. Dingee on back cover.

R. & J. Farquhar & Co., Boston, Mass.—Autumn Catalogue, 1908. Messrs. Farquhar have certainly put before the public a production of which they may feel proud. Printer and engraver have co-operated with them to make this one of the most artistic catalogues ever issued. Single Early Tulip, Pink Beauty, is the subject of the front cover illustration. and the back cover in a combination arrangement of fine design. The book is profusely illustrated throughout, and nothing finer in floral half-tone work can be imagined than are here presented, notably the daffodil portraits.

## PUBLICATIONS RECEIVED.

Low-grade vs. high-grade fertilizers; Improvement of sandy soils; Seed selection; Evergreens, uses and culture; Preparation of miscible oils, are some of the subjects covered by competent writers in Farmers' Bulletin 329 of the U. S. Dept. of Agriculture.

## WANTS, FOR SALE, ETC.

## Gardening for Profit

is an impossibility unless the soil contains, in addition to its other plant-growing elements, a sufficient supply of Potash.

Abundant leafage, wealth of bloom, hearty growth of stock, and superiority of flavor and firmness of fruit are assured by the application of commercial fertilizer in which there is from 10 to 12 per cent. of Potash.

Send for our valuable books on fertilizing, prepared by experts, and invaluable to gardener and fruit grower. Sent free on application.

PATENT APPLIED FOR

### Why My New Curved Iceless Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars incased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: Result, the driest roof ever used for greenhouse purposes.
- 4th. **THE MOST IMPORTANT OF THEM ALL.** The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

William H. Lutton, Horticultural Architect and Builder

West Side Ave Station (C.R.R. of N.J.) Jersey City, N.J.

## SOMETIMES YOU FORGET that we make every part of a greenhouse but the glass—and sell any part.

You remember us on the bigger things, but often it never enters your head to think of sending to us for a tub of putty or a few fittings.

But you ought to — and here's why:

Our sole business is manufacturing every part of a greenhouse. We give it, and it only, our undivided attention.

Everything we make is made with an exact knowledge of just what conditions it must meet, and that is why an ever increasing number from all over the country are continually sending us their orders for just the smaller things.

You know how well we do the big things, and if you only stop to think, it is just because of well done little things that it is possible for us to do so thoroughly and enduringly, the big things. So whether white lead, glazing nails, bench fittings, it matters not what, first write to

## WHY THE U-BAR WINS

If you would just take the time to go and see a U-Bar house, and talk with a U-Bar gardener, then you would appreciate how downright truthful we are in saying it is the lightest, most productive house built. The main structural feature of the U-Bar house is the combining of the steel rafter and cypress roof bar in one, making the rigid, enduring U-Bar. This combined roof bar and rafter is no larger than the single roof bars used in other houses. It does away entirely with the heavy iron supporting members, and makes possible the only successful curved eave. The glass is spaced 24 inches instead of 16. The cypress core bar is soaked in a chemical preservative, before putting it in the galvanized steel U-Bar casing. All steel and iron parts are painted with a special aluminum finish which remains bright for years without attention. To sum it up then—the U-Bar is indisputably the highest type of greenhouse construction.

*The ideal construction for private estates, parks, public institutions and florists' showrooms*

# A WONDERFUL NEW NEPHROLEPIS

## Nephrolepis Superbissima

INTRODUCTION OF 1908

**W**E desire to call attention to this new fern, which originated with us and which we are introducing this year. It is a **very unique and distinct novelty** — as distinct from *Nephrolepis Piersoni* and *Piersoni elegantissima* as they were from *Bostoniensis*. It is in fact a complete break. The fronds are very heavily imbricated, the pinnae overlapping, making the fronds very dense and compact.

It differs from the other *Nephrolepis* not only in form, but also in color, being a **richer and darker green** — entirely different from the yellowish green of all the other *Nephrolepis*. The plant is very sturdy in its habit, the fronds never breaking down.

While a photograph shows a similarity to its predecessors, it is absolutely distinct, not only in the formation of the fronds and color, but also in its habit and general characteristics. It makes a much more dwarf and compact growth, the fronds being very dense, firm and rigid, and having a great deal more substance, so that it will stand more knocking around than any other fern of this type.

It is a sterling novelty. Experts who have seen it consider it by far the **best fern ever sent out**. It is a plant that needs to be seen to have its great value and sterling qualities appreciated. It really is not in the same class with the other varieties. It was awarded a

### ... FIRST-CLASS CERTIFICATE ...

by the Royal Horticultural society at Crystal Palace in London, November, 1907, the plants exhibited there having been shipped from New York two weeks before that time. After being exhibited in London, the same plants were shipped to Edinburgh, Scotland, where they were again awarded a first-class certificate by the Scottish Horticultural Society. This will indicate the value of the plant as a novelty, and also demonstrates in a very conclusive manner its fine keeping and shipping qualities. We have just begun shipping advance orders, and new orders can now be shipped immediately on receipt.

Fine, strong plants, 2½ inch pots, \$5 per dozen, \$35 per 100; 4 inch pots, \$7.50 per dozen, \$50 per 100; 6 inch pots, \$1.50 each, \$15 per dozen.

**F. R. PIERSON CO., Tarrytown-on-Hudson, New York**

## Notes from the Arnold Arboretum

One of the handsomest of the late flowering shrubs is *Clerodendron trichotomum* from Eastern Asia; it is the hardest species of the large genus *Clerodendron* which is widely distributed in tropical and subtropical regions, but even this species is not hardy enough to stand our winters uninjured; it is usually killed to the ground, but vigorous young shoots spring up again from the base and bear flowers in the autumn of the same year. It is a stout upright shrub with large foliage resembling that of *Catalpa*; the flowers appear in the axils of the upper leaves in loose rather few-flowered clusters; they are star-shaped with long protruding stamens and style and their white color is set off effectively by the large red calyx; they are fragrant, while the foliage when bruised exhales a disagreeable odor.

Another late flowering shrub which promises to become a welcome addition to the number of our very late flowering shrubs is the Chinese *Elsholtzia Stauntoni* introduced into cultivation by Mr. J. G. Jack who sent cuttings to the Arnold Arboretum in 1904 from Nankow in northern China. This shrub which has more the nature of a half-shrubby plant attains a height of three or four feet; its opposite dull pale green leaves are three to six inches long, lanceolate and serrate; the small lilac flowers appear in dense one-sided spikes from four to five inches long at the ends of the branches.

*Lonicera Heckrottii* is flowering a second time very profusely and looks very handsome covered with its orange and pale scarlet flowers; it is one of the most free-flowering of the climbing Honeysuckles, but does not climb very high.

An Asiatic *Viburnum* very beautiful in fruit is *Viburnum Wrightii* with large clusters of scarlet fruits resembling those of *Viburnum Opulus*, but the individual fruits are smaller and the cluster larger, though less heavy and therefore borne well above the handsome foliage which turns to a dark red in autumn.

*Crataegus Arnoldiana* has dropped by this time almost all its fruits, but other species are now loaded with brightly colored fruits; one of the handsomest of them is *Crataegus macracantha* covered with large clusters of very lustrous crimson fruits; which though not yet fully ripe, have already assumed their bright color and will stay on the branches until about the end of October.

The Winterberries, *Ilex verticillata* and *I. laevigata*, are assuming their scarlet color, but are not yet as conspicuous as they will be after the leaves have fallen and the fruits now partly hidden by the foliage will clothe the whole shrub in scarlet. Each of the two species has its good points; the first is more thickly covered with fruits and they stay on the branches usually during the whole winter, but the leaves turn dark in fall or drop without change of color, while in *Ilex laevigata* the leaves turn clear yellow, but the fruits are less abundant and do not last as long. The Japanese *Ilex serrata* is very similar to *I. verticillata*, but the fruits and foliage

are smaller. *Ilex monticola*, a species of the Alleghany Mountains which sometimes becomes a tree, has fruits of a duller color and not so profusely produced as in the two other native species mentioned.

Several of the *Euonymus* are now opening and disclose their scarlet seeds. One of the finest is the European *Euonymus latifolius* which grows sometimes into a small tree and has large four or five-winged capsules hanging on long and slender stalks from the branches; at maturity they assume a purplish color and in opening show their scarlet seeds. The Japanese *Euonymus alatus*, forming a dense shrub with spreading branches, bears numerous small fruits, but its chief ornamental feature lies in the scarlet autumnal color of its foliage. The low and straggling *Euonymus obovatus* is decorated with pink and whitish warty capsules disclosing their scarlet seeds.

*Symplocos crataegoides* is unique among the ornamental fruiting shrubs in the bright blue color of its fruits and for this reason alone merits a place in our shrubberies; it is also handsome in June when it is covered with clusters of small white flowers.

Several of the shrubs of *Prunus humilis* which has been mentioned already in the issue of May 16 when it was in bloom bear abundant fruits. These are bright red, about three-quarters of an inch in diameter and resemble a large cherry; they have a pleasant sub-acid taste but without any particular flavor. The fruit as it is, is perhaps not of great value, but compares favorably with improved varieties of the Sand Cherry and is probably as hardy and drought-resisting as that species which it also resembles in habit.

*Alfred Rehder.*

## *Lilium speciosum rubrum* var. *Magnificum*

(See cover illustration.)

Our cover illustration shows a field of the new *Lilium speciosum Magnificum*, a lily that was brought to notice only about four years ago by the Yokohama Nursery Company, having been found on one of the southern islands of Japan. The first shipments of wild collected bulbs were sent to England and Germany and the flowers when exhibited before the Royal Horticultural Society were awarded first-class certificate and at present are commercially preferred to the well-known *Lilium speciosum rubrum* and *Lilium speciosum Melpomene*. It closely resembles the latter but the bright carmine coloring is much more pronounced. The plants grow more vigorous and erect and the entire habit is much stronger than that of the older varieties. The oval-shaped leaves are larger also. The bulb is a fine keeper for cold storage purposes and can be forced well for Christmas. This lily is already a favorite in the New York cut flower market and is well entitled to the attention of the lily growers. When better known it will be generally preferred over the older varieties.

W. C. Barry, in his talk before the S. A. A patriotic Florist, said that every time obligation is placed on a rose bush or indios something is done so he does something for his country. These and other similar in sentiment can be iterated and reiterated and much has been said with the same purpose in view of waking up the producer and dealer in these

goods to the possibilities which lie in his way out thus far there is little evidence that the well-meant advice has been heard or heeded. Engrossed with the details of his work from a commercial or professional standpoint, the horticulturist has found little time to consider the patriotic aspects which touch so closely upon his avocation that attention to them seems almost a duty. None of us need go far from our home neighborhood to find abundant evidence of how much is needed and how little is being done.

Among the signs of awakening business activity the travelling salesman shines conspicuously. Since September 1st is he abroad in the land stirring

us up with his optimistic predictions of good trade for the coming season and infecting all with whom he comes in contact with his hopeful confidence and his spirit of dogged hustle which knows no such word as fail. Listen to him and be revived. Take a lesson from him in the art of salesmanship and strive to acquire a good supply of that convincing persuasiveness which sells the goods and makes the purchaser feel that he has been honored in the privilege. Yes, these periodical visitors are well entitled to recognition as among the most effectual trade promoters. Trained and seasoned by continual contact with every phase of the business with which he is identified, obliged to study individuality and to size up men and conditions as he finds them under varying circumstances, the travelling man is a good fellow to know and what he has to tell you is well worth listening to. We like him and no visitor to our sanctum is more welcome. Long may he wave.

## A worthy cause

Contemplating the various philanthropic agencies for the uplifting of humanity and the development of ideals which tend to mold refined character and incidentally promote a wider appreciation of and love for the products of the horticulturist, we think of none more worthy from our point of view than the incentives provided by generously inclined individuals and by various organizations to encourage the cultivation of flowers in windows, on roofs or in patches of neglected ground in the crowded tenement districts. It is easy to imagine how a little well-directed work on these lines may influence and often completely change the course of a child's reasoning so that when he comes to the parting of the ways he shall choose that road which leads on to good citizenship with all that this implies. There are the best of reasons why the florist trade should be ever ready to accord approval and encouragement to these benevolent movements and, from the nature of things, it is in an excellent position to do so most effectively. While fighting against any course that might lead to an underestimate of the cost and cash value of the florists' products there are yet frequent opportunities for discreet donations of surplus and discarded stock which would otherwise be lost entirely. Disposed of in this manner it is seed wisely sown which will surely return a profitable crop in due time.

## Rambles in the Rockies

NO. 2.

Let those who will prefer old ocean, but give me these grand mountains with their sublime peaks, deep canyons, granite turrets piercing the sky. To us, horticulturists, these marvelous conifers have the greatest attractions for here are found the most beautiful trees in all the earth.

Let us go up a bridle path beside a roaring stream where the crystal waters laughing in boisterous glee are tumbling over the rocks in their haste to reach the plains. Here is the silver cedar, *Juniperis scopulorum*, in form like the Irish juniper but far transcending it in beauty. The foliage sparkles and glistens in its frostings of silver. It is very hardy and is one of the most beautiful trees one can plant on our western prairies. The other day in Nebraska I saw a row of them in front of a cemetery, planted some years ago. The row was a quarter of a mile long and every tree was worth \$5 if placed singly in a lawn. They are hard to propagate. Years ago we used to collect them, plant them in nurseries and let them develop. It takes two years for the seeds to mature and then it is difficult to germinate them. They do not retain their exquisite coloring as well in the moister climate of the East.

The heroic *Pinus ponderosa* is here in its glory. You see them in the valley, or adorning the steep hillsides, or on the very brow of the precipices sticking their toes in the rocks and waving defiance to drouth and storms. After years of careful experimenting we have a system perfected for raising these trees so that they can be grown as readily as deciduous trees, and when once established they will defy everything.

The Technical World of last June gives a process by which the long needles of this tree are made into fiber which is manufactured into cloth, so "Go West, young man," plant a lot of ponderosa pine on the great plains and then let science and art wave their wands over them and turn them into a flock of sheep!

Let us go higher up through the ranch of T. C. Thurlow, the peony prince of New England. He always takes the peony prizes, and if he could take some of his groves of trees, clothed in more than royal beauty, down to old Massachusetts he would take the prize over everything in the State. You never saw such concolors. They are robed in such imperial garments they might fittingly stand sentinel at the very gates of Paradise. Look at that grove; note the grace and symmetry of coloring of each tree. Every needle flashes and shimmers in the sunlight. There is a radiance indescribable. There are no seeds on them this year, but when they bear cones it adds to their beauty. For instance, two trees stand side by side bearing immense cones about the size of early sweet corn. One tree has those of light green, the other is of deep purple. You note no difference in the shape of the tree or the color of the foliage. It is a trick of nature to give us all the variety possible in the same species. Here on the same ranch are groves of the Douglas spruce. There is not a tree on earth that can show such infinite variation. Often the mountaineers would come to me and say, "We have found a tree of an entirely new species, something you have never seen." At great trouble I would climb some steep place and there in a quiet nook would find a Douglas with a dress entirely different from its neighbors. In fact this tree with its numerous sports and

variations has over 100 names. In secluded places you will find those of deep blue type vying with the richest pungs. Some have rigid limbs and others have a graceful pendulous habit. A weeping Douglas of silver foliage is a tree of entrancing beauty. These grow very rapidly and in many places will lead all other trees in the nursery.

I wish Brother Thurlow could visit our ranch and spend a summer on it—he would find himself nearer Paradise than he ever was before, where the intense blue of the sky would pitch tent above him and the silent clouds in voiceless sympathy would gather around him; where trees wearing garments of more than courtly splendor would stand sentinel about him.

But let us go higher up. We find the *Pinus flexilis*—a tree much like your centara pine. I never have seen it in the East, but I think it would do well there. It is a success on our western prairies often assuming a silvery type which makes it very attractive. Now we come to pungs and Engelman belt. I need not describe the former. I think the latter is fully as attractive. Up near the timber line are immense forests of these trees. Dr. Fernow of the Forestry Department and myself years ago measured a fallen monarch which was three feet through and 125 feet tall. I see no reason why this tree should not be a favorite of the North.

In climbing a mountain you go from the temperate to the frigid zone in a short time. For instance, the white oak will be of fair size in the foot hills, but it grows smaller and smaller as you ascend until it dwindles to the size of a currant bush. At this elevation we find the subalpina fir. This grows fairly well in Massachusetts. It has a straight stem with bark nearly as white as the birch. The lower side of the needles is of silvery whiteness and the upper side deep green. It has a habit of dropping the lower limbs into the leaf mould and these take root. You often see beautiful clumps of these trees surrounding a dead parent.

At this altitude you find the most unique of all the conifers—the Aristata or Foxtail pine. For some reason this tree has not been grown much in the nurseries. While very young it is inclined to sunburn. With age it becomes stronger and I have known it to thrive in the hot climate of Nebraska. Here also you find the *Pinus contorta*. When the lower limbs die they turn and twist and writhe like so many serpents. This is the tree of the Yellowstone National Park where they are packed and crowded together like so many masts.

I enter this charming grove where these trees become my welcoming hosts and I their grateful guest. Here I am alone with sublimity and God. These mountains draped with green are mute anthems attuned to His praise. Far as the eye can range are forests and hills, deep canyons and towering peaks. I am in the heart of Nature's mighty song; the thrill of it goes through my soul. There is no roll of organ, no swelling chorus; yet some way all these groves, these trees dressed in imperial robes, the rocks, the crags and peaks and massive towering summits, seem to swell the anthem. Instinctively I uncover my head and over me comes an awe and a gladness as if I had come to my own. I am in harmony with this silent praise which swells upward to the unseen. Oh, the sublimity of it; the thrill and inspiration to worship the Creator in Nature's holy of holies.

C. S. Hamman

York, Neb.

# NEWS OF THE CLUBS AND SOCIETIES.

## PITTSBURGH FLORISTS' AND GARDENERS' CLUB.

The meeting of the club September 1st was well attended, and the members seemed to have come back refreshed from their various summer outings. Pittsburgh celebrates her one hundred and fiftieth anniversary during the week of September 27 and the florists have been asked to contribute a float for the monster street parade. A special meeting of the club was called on August 8 to consider the matter and a committee of arrangements consisting of S. M. C. Clements, W. Breitenstein, A. W. Smith, Jr., J. W. Ludwig, H. L. Blind and T. P. Langhans was appointed with full power to decide.

A competitive exhibit of gladioli, dahlias and vegetables had been scheduled by the private gardeners, but owing to the unfavorable dry weather gladioli and dahlias were not available. There were two fine displays of vegetables, the one grown by Robt. Lillie, gardener for T. N. Barnsdale, receiving the prize of \$10.

E. D. Smith Co., Adrian, Mich., sent a fine display of asters; Randolph & McClements had a large showing of crotons; H. D. Price, King Humbert and Express cannas in fine form, Meehan's mallow marvels and nasturtiums of a new tint; Phipps Conservatories, J. W. Jones foreman, two vases of Semple's asters that showed no effects of dry weather. The thanks of the club were tendered the exhibitors.

Subject for next meeting, "Dahlias, orchids, herbaceous and annual flowers." H. P. JOSLIN, Secretary.

## NEW JERSEY FLORICULTURAL SOCIETY.

The regular monthly meetings were resumed on Sept. 4 at the society's rooms in Orange with a fine display of the season's flowers from greenhouse and border. Lager & Hurrell staged a stunning collection of hybrid orchids Thomas Jones, Cattleyas speciosissima, Harissonii and gigas and Oncidium Lanceanum. Thomas A. Edison, gardener Frank Drews, aster Weeber & Don's Best; A. C. Van Gaasbeck, gardener John Darwin, asters and dahlias; C. L. Bausher, gardener Philip Cox, roses and gladioli, Stewart Harts-horne, gardener: A. T. Caparn, delphinium, Polygonum cuspidatum, and vase of herbaceous plants; Charles Hathaway gardener, Max Schneyder, Euphorbia variegata; S. & A. Colgate, gardener Wm. Read, vase of zinnias; A. T. Gillespie, gardener George Oakley, collection of vegetables.

A stereopticon exhibition of flowering shrubs the slides for which were loaned by the N. Y. Botanic Garden, a Mrs. Van Brunt's superb coloring, was the attraction of the evening. The border in Central, Prospect or Botanic Garden Park and the individual flowers were exhibited, and the treat was accorded a hearty vote of thanks.

JOSEPH E. DAVIS.

## SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

The notice of withdrawal of the award to the Altimo Culture Company, read at the recent convention of this society, was an error.

The original award of a Certificate of Merit for the Chrysanthemum Aster was correct and will stand.

W. N. RUDD, Sec.

Sept. 4th, 1908.

## National Flower Show.

Chairman W. F. Kasting announces the appointment of A. T. De La Mare and Edward F. Winterson to fill vacancies on the committee of fifty caused by the deaths of Alexander Wallace and William Scott.

The executive committee at its meeting in Cataract House, Niagara Falls, Aug. 20, approved of a call for an additional assessment of 30 per cent of the sums guaranteed, for which notices will be sent to guarantors at once. An appropriation for the advertising of the show was made upon an estimate submitted by Chairman George Asmus. Rule 1 was amended to require an entry fee of \$1 for each entry in all classes where the first prize is \$5 or more, except in the private gardeners' classes and except for foreign exhibitors. Those excused from an entry fee will be charged a \$2 fine for failure to stage an entry. Rule 3 was amended to make 11 a. m. the last hour for staging plants and 12 m. for cut flowers.

On motion of S. S. Skidelsky it was decided that trade tickets should be issued at a reduced rate and sold under restrictions imposed by the local management committee. Chairman Koenig of the special features committee reported, and was requested to continue his good work in trying to provide drawing attractions for the show, an appropriation being made for his expenses.

On motion of W. N. Rudd it was decided to allow no salary or expense account to judges at the national flower show, and that judges be appointed by the following: For Division A, Chrysanthemum Society of America; Division B, American Rose Society; Division C, American Carnation Society; Division D, New York Florists' Club; Division E, Illinois State Florists Assn.; Division F, Horticultural Society of Chicago; Division G, Chicago Florists' Club; each of these societies to nominate three judges. J. H. BURDETT, Secretary.

## NEW YORK FLORISTS' CLUB.

The opening meeting of the season will take place on Monday evening Sept. 14, at the club rooms on West 23d street, New York City. Benjamin Hammond will talk on some features of the school garden movement, a subject on which Mr. Hammond is well qualified to speak, by reason of his many years' interest in educational topics and his love of horticulture.

## FLORISTS' CLUB OF WASHINGTON.

The members of this club were most delightfully entertained on Tuesday evening, Sept. 1, by their fellow-member, Edward S. Schmid. After the close of routine business the guests were invited to the banquet room, where after all had partaken to the limit, the rest of the evening was given up to varied amusements, such as recitations, songs, piano solos, etc. The recent S. A. F. convention at Niagara Falls, where this club was represented by 20 members, was discussed at much length.

The newly-elected secretary, Geo. Shafer, read a notice of the annual Harvest Home Festival and Dahlia Show to be held at the warehouse of R. Vincent, Jr., & Sons, at Cowenton, Md., from Sept. 22 to 26, inclusive. A fine dahlia and geranium show will be features of the occasion. The sum of \$10.00 was voted to be donated to the fund which is being raised to erect a monument to the late Wm. Scott, of Buffalo, N. Y. The next meeting will be held at the greenhouses of Gude Bros. at Anacostia, where the club will be entertained by Adolphus Gude.

## GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The regular monthly meetings of the club will be resumed on Tuesday evening, Sept. 15, at eight o'clock. In place of the stated lecture there will be quite a number of vacation experiences by a number of prominent members of the club, covering both Europe and America. These cannot fail to be very interesting. There will be reports on the late successful picnic and field days, interesting exhibits and other attractive features, and all records of September meetings will undoubtedly be broken. Members are invited to bring along any interested friends to enjoy this meeting.

W. N. CRAIG, Secretary.

## NEW YORK AND NEW JERSEY ASSOCIATION OF PLANT GROWERS.

The outing and clam bake of this organization will take place at Duer's Whitestone Pavilion, Whitestone Landing, N. Y., on Tuesday, Sept. 15. The members and friends will start from Long Island R. R. station on special cars attached to train leaving at 10:33 A. M. A breakfast will be served at noon and the clam bake will be on at 1:30 P. M. The committee in charge has arranged for prize bowling for ladies and gentlemen, prize shooting, dancing and other enjoyable pastimes.

## CHICAGO FLORISTS' CLUB.

The Chicago Florists' Club had a good attendance at the regular meeting September 3. The picnic committee made its report on the financial outcome of the picnic which indicated a surplus of not less than two hundred dollars. This sum will be used toward the fund for entertaining visitors at the National Flower Show in November. The coming flower show

was informally discussed but nothing definite decided upon. Wm. Kasting of Buffalo, chairman of the National Committee, will call a meeting at Chicago about the 15th inst. and the club decided to hold a special meeting at that time to perfect arrangements. The Rose Show Committee reported and was discharged.

#### CLUB AND SOCIETY NOTES.

The American Association of Railroad Gardeners met at Niagara Falls Sept. 9.

At the meeting of the Houghton Horticultural Society, Lynn, Mass., on Sept. 2, E. F. Dwyer gave an entertaining talk.

The Illinois State Fair to be held at Springfield the last week in September will make quite a feature of plants and flowers and valuable premiums are offered.

At the first September show of the Worcester County Horticultural Society, Worcester, Mass., gladioli, begonias and phloxes were abundant and fine.

A very interesting discussion was started at the last meeting of the Winnipeg Florists' Association (Manitoba) on "The Aster Blight and Its Cause," which will be continued at a future meeting.

At the meeting of the Southern Nurserymen's Association at Atlanta, Ga., Aug. 19, 20, Henry Chase was elected president; J. C. Miller, vice-president; and A. I. Smith, Knoxville, Tenn., was re-elected secretary and treasurer. The next annual meeting will be held at Huntsville, Ala.

The horticultural exhibition which opened Sept. 3 at Manitoba Hall, Winnipeg, was a really splendid one, and the sum of \$1,000 which was offered in prizes brought out the exhibitors in goodly numbers. The exhibition was under the joint auspices of the Winnipeg Florists' Association and the Western Horticultural Society, and its officials worked hard to make the show a success.

Messrs. F. R. Pierson, Peter Duff, John E. Lager, Jos. A. Manda, W. W. Burnham and John Young, representing the Horticultural Society of New York, held a meeting at Mr. Young's office on Tuesday, Sept. 8, to make arrangements for the fall exhibition which will take place at the Museum of Natural History, 80th street and Columbus avenue, New York City, on Nov. 17, 18 and 19.

At the sixth annual meeting of the Society of Iowa Florists on Aug. 28 officers were elected as follows: President, Charles N. Page, Des Moines; vice-president, J. S. Wilson, Des Moines; secretary Wesley Greene, Davenport; treasurer, Peter Lambert, Des Moines. It was voted to hold a special meeting the second week in December and the next annual meeting in Des Moines during the state fair next fall.

The Mt. Desert Nurseries, Bar Harbor, had a magnificent collection of decorative plants and cut flowers, Casco Castle Greenhouses displayed cut flowers, E. F. Hitchings, Bangor, showed a home flower garden, where the sweet peas were a leading feature, and A. R. Meader had gladioli at the fair at Waterville, Me., last week

#### TWO NEGLECTED ANNUALS.

The section of garden annuals popularly known as Everlastings embraces many very beautiful flowers among which none are more desirable for garden or pot culture than the one illustrated herewith. *Rhodanthe Manglesi*

*RHODANTHE MANGLESI*

glesii, also called *Helipterum Manglesi*, furnishes a profusion of lovely pink and white blossoms throughout the midsummer season when such are most needed in the border. The globe amaranth which is in many respects inferior to this *rhodanthe* is, for some unexplained reason much more commonly grown. There should be a place

*VISCARIA OCLATA ALBA*

in every garden for *Rhodanthe Manglesi*.

Another meritorious but neglected annual is the pretty little *lychnis*, *Viscaria oculata alba*, shown in the accompanying illustration. In association with the pink flowered type it makes a very effective display in the garden border.

#### FERTILIZERS AND FERTILITY.

A Paper by J. F. Cowell, read before the Society of American Florists and Ornamental Horticulturists, at Niagara Falls, N. Y., Aug. 19, 1908.)

Few phases of scientific investigations are of greater interest, or hold forth more promise of profitable results, than the studies which are being made in regard to the fertility of our soils and their conservation. To the gardener the subject is of prime importance, whether his work be in the open field or under a roof of glass; whether engaged in the growing of the primary food products, or in the production of materials for decoration and the expression of the higher aesthetic feelings of mankind.

That we are still in the experimental stage of agriculture can hardly be denied, though we are slowly approximating to a scientific basis. Theory and practice are often at variance, probably from a misunderstanding of the meaning of the facts before us. These differences will in time be eliminated, and our practice will constantly become more exact. That we still have many things to learn about our soils and their relation to plant life goes without saying, but at the present time I think we are not all making the best use of the knowledge which has accumulated on these subjects.

In this paper, today, will be found little that is original, but rather an attempt to collate and place before you some of the more striking facts and theories current at this time.

In these days of extensive gardening, all questions relating in any way to the supply and assimilation of the elements of fertility are of vital interest, as upon their correct solution depends the final profit or loss.

In order that we may discuss these matters more intelligently, let us briefly review some of the fundamental facts which underlie the subject, as well as some modern theories of fertility and assimilation, and the relation of various factors which enter into the problem of plant growth.

The great bulk of plant tissue is made up of starch, cellulose and water, with a small amount of protoids or albuminoids. These reduced to their simplest terms mean carbon, oxygen, hydrogen and nitrogen, which, together with potash, phosphorus and a little lime and sulphur, make up the list of essentials. Carbon, oxygen, hydrogen and nitrogen in gaseous condition are everywhere present in the atmosphere, while potash, phosphorus and lime and sulphur are found to a greater or less extent in most soils, and are the elements which become exhausted and have to be

renewed. Of these latter elements sulphur may be omitted, as it, like some other elements of minor importance, is usually found in sufficient quantity.

Of these substances the most expensive and at the same time the most evanescent, is nitrogen. The soil will not hold it; it is here today and there tomorrow. It is inordinately fond of fresh fields of activity, and so impatient of confinement that it has to be constantly kept at work, and watched lest it escape into the atmosphere from whence it came, or enter into some combination which secretes it and deprives the plant of its services.

The usual sources of supply for fertilizing purposes are from animal substances, stable manure and from natural deposits of nitrates.

Potash is a more stable element, though likely to be lost by leaching, and is obtained in commercial quantities from wood ashes and from the nitrates and sulphates.

Phosphoric acid is commonly bought in the shape of ground phosphatic rock, from bone, horn, hair, from fish and from basic slag. These three elements have been called "The tripod of fertility."

A so-called complete fertilizer as prepared by the manufacturers will contain, we will say, 60 lbs. of available nitrogen worth at 19c. per lb., \$11.40; 6 per cent. or 120 lbs. of available phosphoric acid worth at 5c. per lb., \$6.00; 5 per cent. or 100 lbs. of available potash worth at 5c. per lb., \$5.00; making a total cost of \$22.00 per ton, of which more than one-half is represented by the nitrogen.

From whatever source these elements are obtained, they must be soluble in water in order to be available to the crop. Potash and phosphoric acid can be applied to the soil at any time, and the loss from leaching or otherwise is not very serious, while any surplus beyond the present needs of the plants will be retained for future use; but nitrogen applied in excess is, as a rule, nitrogen wasted, and as we have seen, this is an expensive fertilizer. This leads us to the theory, which has the support of good practice, that nitrogen should be applied in small quantities, and often rather than enough at one time to perfect the crop. There are combinations of nitrogen, however, as in stable manure and animal matters, which require time to unlock and render available. Such compounds may be applied in larger quantities some time previous to the planting of the crop, or a time allowance made to enable the proper forces to tear the combinations apart, and render nitrogen fit for assimilation.

The high price of nitrogenous fer-

tilizers has caused careful search to be made for the purpose of finding cheaper sources of supply than those above mentioned.

To understand the reasons for some of the studies which have been made with this end in view, it will be well to review some of the theories of the inhalation of nitrogen and the forces which are supposed to play an important part in the reduction of nitrogenous compounds and the secretion of the product within the plant tissues. Some of the most interesting chapters in the history of plant life are those dealing with the relationships between widely different organizations where a partnership is formed for the mutual benefit of the parties concerned. It was formerly supposed that all plants growing upon others were parasites, or, to use the somewhat "yellow" language of Grant Allen, they were committing "Robbery and Murder." When, nearly forty years ago, Frank made the startling assertion that the "Beech is a parasite on a fungus," he did not mean just what we would ordinarily understand by parasite, but that the beech was simply dependent for the supply of nitrogen upon a mycorrhiza or root fungus.

Modern investigations have shown that many of the associations are far from being criminal, and that the two members are mutually dependent on one another for existence. To this peculiar arrangement has been given the name of symbiosis, which, being interpreted, means growing together.

Plants of the higher orders are dependant for their supply of nitrogen on that which is soluble in water, while some of the lower forms are able to extract it from its compounds, or, as some claim, from the atmosphere, a statement, however, which needs proof. Of the lowly forms which possess these powers of nitrification, perhaps the most familiar are the maligned bacteria. To these simple nitro-organisms we probably owe most of the reduction of organic remains, the breaking down of complex, and the formation of simpler soluble ones.

It is maintained that a symbiotic relationship exists between our red clover and the nitrifying bacteria, and that the little swellings or tubercles which are ordinarily to be found on the roots of the clover are the homes of the bacteria; that the bacteria supply the nitrogen necessary for the growth of the clover, and, in return, take from the clover such elaborated food as they may require.

Such tubercles may be found on the roots of beans, peas or, in fact, on most any of the leguminous plants.

Whether the bacteria can take nitro-

gen from the air may well be doubted, but it is a pretty well established fact that they can extract nitrogen from combinations that are beyond the power of higher plants. So firmly has the belief in this association been established that it has become the practice to inoculate the soil with the proper bacteria when legumes are to be grown on soil where their natural symbionts are lacking.

This inoculation is often made by the transfer of some soil from a fertile field to the new location. One can obtain on the market pure cultures of bacteria suitable for various crops, and sow with the seed. That the use of these cultures is not uniformly successful, does not disprove the theory, but rather indicates that the preparations are at fault, or that they are not properly applied.

Long before these relationships were known, the fact was realized that if a good crop of clover could be grown upon a field it could safely be relied upon to grow a good crop of corn or wheat the succeeding year, and this notwithstanding the fact that the clover had been cut and removed in the form of hay, the extensive root system of the clover with its stored nitrogen being sufficient for the succeeding crop.

The action of fungi of the unicellular type in breaking down organic compounds has long been recognized, and put to use in many industries; witness the yeasts and other ferments of this class, but their mutual relationships with the higher plants are subjects of quite recent inquiries. To recur to the statement in regard to the fungus and the beech, we find that in this case we have a fungus of a higher and much more complex organization, a fungus which, instead of being a microscopic unicellular plant or a collection of similar cells, is really a structure having organs highly differentiated and making in some stages of its growth a conspicuous object to the naked eye. Here, too, it is believed that a symbiotic relationship is maintained, and that the mycorrhiza, in return for the nitrogen secreted for the higher plant, takes its pay in starch or sugar which it is unable to make for itself. Investigation shows many cases of symbiosis between plants containing chlorophyll and those which are without it. Among our cultivated plants which depend more or less upon the help of the root fungus, we may mention some of the orchids, gerardias, polygalas, some ericaceous species and many others. If you will examine some of these plants, or, to be more exact, if you will place a thin section of their root on the stage

of a microscope having a magnifying power of about nine hundred diameters, you will be able to trace the mycelium of the fungus investing with its anastomosing fibres the outside of the root and penetrating through the epidermal cells of the host.

In speaking of the ferments we are prone to infer that the work is all done by the micro-organisms already referred to, but it seems that still more important in the economy of plant as well as animal life are the unorganized ferments or enzymes. It now seems likely that these enzymes may have an important bearing on the fertilizer question. Just what the nature of these substances may be, at the present time we do not know as it is difficult to collect them in a pure state. That they are highly nitrogenous however, is generally believed. But it is their action which concerns us most. It is said that these ferments bring about changes by their mere presence, or at least without loss of their own substance. That is what is called catalytic action, just as the presence of certain metals in a solution will precipitate other metals.

These enzymes exist in all parts of the active tissues of the plant, and are found in abundance upon the growing point of roots. They evidently have the power of reducing the starches, fats and proteids to forms which can be directly assimilated and used in the building up of tissue. In fact it appears that it is to the work of these enzymes that the bacteria and other simple forms of vegetable life owe their power of rendering up in such a remarkable degree the nitrogen contained in albuminoids and other compounds. The enzymes have been studied principally as they appear within the plant body. They are not themselves organized, and are products, not parts, of the vegetable cell. They can bring about their characteristic changes as well outside as inside the body; and an interesting question is how far these substances may extend outside the plant body, and if it is not possible that in some genera of plants the work of collecting nitrogen from the soil is not due directly to them without the intervention of the fungus.

In discussing the fertility of the soil, there are other factors than the presence of chemical elements necessary for plant food. The food must be accessible, there must be a supply of water for solvent purposes, and there must be a sufficient amount of heat to encourage the action of the dissolving agencies. The physical condition of the soil plays a very important part in determining the fertility of the soil. Air and water are not usually spoken of as fertilizers, but they, nevertheless, are vital to the success of the plant. The soil must be of such character that the air can circulate among the particles and come in contact with the rootlets. The soil must also be in such condition that it will hold a certain amount of water, and it must be of such consistency that the root hairs can visit every little grain of earth in search of nutriment.

The soil must not be so fine as to obstruct the free passage of air and water, nor so coarse as to allow either to flow through in currents.

FORMOSUM LILIUM LONGIFLORUM

(Grown from bulbs of the Yokohama Nursery Co.)

Surplus offer of

## FORMOSA LILIUM LONGIFLORUM

On account of unfavorable weather the bulbs of the Formosa Liliium Longiflorum did not grow up to the sizes expected but the plants formed good solid bulbs. We are convinced our 6/8 in. size will give the same results which under favorable conditions a bulb of 7/8 in. would produce, and if two bulbs are planted in one pot the plants make a nicer showing than those with a single stem.

6/8 in. bulbs, 100 in a case at \$16.00 per case, 5% cash discount.

## CALLAS, WHITE, JAPAN CROWN

Our stock is grown for one season in dry loamy soil to make these roots fit for the long journey, consequently they are not as large as California grown stock. They produce however more flowers and are perfectly healthy.

Size 1—2 in. in diameter \$45.00 per 1000, 5% cash discount.

What we need is a happy medium where the spaces between the soil particles are such that a mere film of water encircles every one, or what is called hygroscopic holding of moisture. In this condition the soil is capable of absorbing and holding the greatest possible amount of nutrients in a readily accessible manner. In this condition too it will maintain a more equable temperature and become a more comfortable home for nitrifying bacteria. This physical condition of the soil is brought about by tillage, and it is frequently the case that proper handling of the soil makes all the difference between success and failure.

So much for some of the factors which we have to consider in increasing the fertility of our fields, and now let us consider briefly some of the causes of loss of fertility. We are apt to attribute loss of fertility entirely to absence of available plant food. That such is not always the

case will be evident to anyone who has had long experience in gardening operations.

In the originally fertile farm lands of Central New York where a rotation of corn and wheat and clover, or wheat, clover and grass, or something of that kind was pursued for long years, we heard complaints of lessening fertility. The land would no longer grow clover, or, as the farmers expressed it, the land was "clover sick." This land still grows a fair crop of corn or potatoes or the grasses, but clover must be given a rest and is uncertain.

After a few years rest, probably the clover grows again. There are failures of other crops it is true, failures which are often and perhaps justly attributed to exhaustion of the soil or at least of certain of the elements. The theory is that the land must be rested or a rotation pursued which will allow of a recovery, or a renewal of the missing element. It is such

# HARDY FERNS ATTENTION! HARDY FERNS

WE wish to call the attention of the florists of the United States to the fact that we are this year storing and collecting our own hardy ferns and galax, hence we are in a position to compete with anyone on price and quality. Special prices made to persons agreeing to take a stipulated sum during the year while cold storage ferns last which is about the first of May. Write us the quantity you can use and we will quote you price. We trust you will favor us with your future orders.

**N. F. McCARTHY & CO.,** Largest Shippers of Florist Supplies in New England  
84 HAWLEY STREET, BOSTON, Mass.

occurrences which have been responsible for our systems of rotation of crops.
